Source record: 101443

Yeah, I bought one in 1988. Heath advertised it _with_ the optional panadaptor, if purchased on closeout. Well, the panadaptor was backordered and, of course, never materialized. Was the only reason I bought it. I almost returned it.

If anyone has the spare panadaptor....

Source record: 101446

I have a very nice R-390A that I don't want to sell but I need to so I can pay bills.

This R-390A is made by Stewart-Warner contract 20139-PC-60 serial# 2756
The set is very clean and in very good cond. inside and out, at least 8-9.
The set works very well with very smoth tunning, The only problem with the set is the Zero Adj. does not work. The set comes with orig. meters and top and bottom covers. The line leval meter has a white face but it is orig.
I can bring this to the Cedar Valley Hamfest in Amana,Iowa on Aug. 9 or I can ship it. I am asking $400.00 or best offer for it.

Thanks & 73, John Richardson kb0upl

```
TFT model 753, rack mount, large, lighted, mod %
meter, still FCC type accepted.
Covers AM broadcast band and SW. Makes a great
mod monitor for that
AM rig! Hi Fi monitor audio audio output, 0.15%
max distortion. This is a high end
modulation monitor still used in commercial
broadcast stations. Needs a small
RF sample coupled into it for operation. Works
well on 160, 80, 40, 20 M !!
Very sharp looking....
Some specs:

Reads -100% to +133% with 1% accuracy
freq response 20 Hz to 25 KHz, demodulated audio
out
peak indicator adjustable 30% to 150%
S/N ratio >75dB
Power required 117 VAC, 50/60 Hz 2.5A max
Mounting 19" rack, 51/4" high, 14" deep

With original manual, $249 shipped to lower 48

73,

Chuck...K1KW

Chuck...K1KW

16. National HRO (x2) For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-01 00:00:00 UTC
From: "J. Lee Smith" <ckvnfm@mb.sympatico.ca>
Message-ID: <01bdbd8b$47920e60$9736c8cd@ckvnfmmb.sympatico.ca.mb.sympatico.ca>
Source record: 101450

For Sale, National HRO:

This is an interesting package of goodies for an HRO fan. I bought this equipment about 4 years ago, but since then my interests have changed to Collins, and it is unlikely that I'll get around to doing anything with this project.

I used to look at the Nationals on the Boatanchors page, and old QST issues and always wanted one, but I guess I'll just never get my butt in gear on this so I'd like to see it go to a nice home. A good link to check out info on HRO's is located at: http://www.io.com/~nielw/hro_modl.htm

There are 2 receivers in this package, plus numerous coils and parts.
A large collection of HRO documentation is included...a mixture of original and copies.

HRO-M-RR, Speaker, coil cabinet, and rack:
This radio is mounted in a 19" rack mount made of angle iron which includes a speaker, a coil cabinet, and the receiver. All are painted in black wrinkle finish. This unit stands about 24" high. I remember seeing an ad in a 1939 QST which showed a picture of the unit, and the price in 1939 dollars was about $450! A lot of change in those days!

HRO "Home-Brew Replica"
This is a pretty ambitious project started by a SK who obviously put a great deal of effort into building a high quality replica HRO before he died. It appears to be about 80% completed, is extremely well documented, including a hand-drawn and coloured large size schematic and pictorial of the circuit. S meter, new dial and capacitor tuning assembly were used on this, and all metal work is superb. Soldering was done by someone who obviously knew what he was doing.

A total of 15 coil sets are included. Some of them are:
(2) 7.0 to 14.4
(2) 1,7 to 4.0
(2) 3,5 to 7.3
(1) .5 to 1.0
(1)1.4 to 3.0

One of the coil racks is original wood, the other is a somewhat crude home-made box.
Many of the coils are the "Bandspread" type.

Other parts:
(3) PW dials, with paint removed. One has the "gearbox" from the capacitor bank still attached, and appears to function nicely. The other two are the

dials only.
(2) complete ganged capacitor assemblies with gearbox

Negative aspects:

There is no power supply for it. As a result, I have never powered up this radio. All caps are still original. It's operational condition is totally unknown. Shipping from Canada may be a problem due to the size of the rack, and the total weight of the package. That's about all I can comment on.

If you are interested or curious, I'll attempt to answer your questions as factually and honestly as I am able. Asking price for the entire lot is $300. If I am totally out to lunch with this price, please advise me. Regards from the middle of Canada!

Lee Smith

From my extensive index card file developed over the past 40 years
(ug, i hate to think of how many hundreds of hours of my youth were
spent writing notes on those cards!) I find the following:

T-67/ARC-3 Radio Transmitter, VHF aircraft

8-channel AM xtal controlled, electric band change
100 - 156 Mc. (that was before MHz)
24vdc
410vdc @ 325 mA.

2 @ 832
2 @ 6L6
1 @ 6J5
3 @ 6V6
1 @ 12SH7

15 1/4 x 7 1/2 x 12 1/4 inches; 21 lbs.

sold in June 1964 by Fair Radio Sales at $22.95
(up from $16.95 in June 1962 !!)

Article on AFSK on 2m or 6m using this transmitter
appeared in CQ magazine, Oct. 1965, page 62.

25. Jax,FL Hamfest report

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-01 00:00:00 UTC
From: Gordon <ziggy7@earthlink.net>
Message-ID: <35C3B558.1BF28225@earthlink.net>
Source record: 101459

Greetings, Fellow Boatanchor Lovers:
I just returned from our annual Hamfest here in Jacksonville, FL. There were only three boatanchors worth looking at today, and they were all on one table. I bought the most beautiful HQ-129X I've ever seen. It has been totally restored including complete cap job, new faceplate, fresh paint on the cabinet, and carefully aligned. It even came with the matching speaker. I am listening to it now, and it works like a new one.
The other two were Collins 75A's. They were also beautifully restored, clean enough to eat off. One was $500, the other $600. You could call Jerry Gentile at 904-786-7246 if these are what your heart desires. They didn't sell today.
I also bought about 5000 new tubes from a dealer who is sick of going to shows. I guess it's time to finally get some shelves and organize my tubes. I did not see a single tube tester for sale this time.
I also bought a mint IM-11 VTV with manuals & probes for $10! I have been missing mine (that I built as a teenager & loaned to some A-hole) for a long time.
What a fun day!
73, Ziggy

Hello all, I've just re-stocked alot of the NOS tubes I was out or low on, and have found many excellent used, but not abused radio,audio, t.v.and amateur tubes that test excellent via my Hickok 600 A. Now's the time if you want good used tubes at a nice price, or if you want NOS i'll take care of you also. Low shipping costs and no minimum order required.Thanks to all in this and the other groups for
letting me serve you in the past 4 months. Stock is coming in from all over, so I probably have what you're looking for. Sorry no list, it would take forever to create and update with the size of this collection.
So please send me your wanted numbers and i'll look them up for you, listing different brands and configurations of what is available with a prompt reply.
Thank you,
Joe Pratt, Tubecntral@aol.com

Anyone care to speculate on what the subject UNASSEMBLED kit (WITH the optional panadapter) might be worth? These kits cost a total of $350.00 when new (1985-1988). According to the Penson book, "the HO-5404 is quite rare." So-o-o, how rare, in greenback dollahs is "quite rare," does ya' think?

38. NEW TECHNICAL RESOURCE CD-ROM PUBLICATIONS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-02 00:00:00 UTC
From: tsm@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-980802161707Z-94@webmaster.eletrosys.com>
Source record: 101386

Since this august group is always looking to increase their knowledge about electronics, boatanchor radios, tubes and the like, I thought you who might read this may be interested in two new technical book CD-ROMS just recently completed and ready for distribution:

The fabulous Radiotron Designers Handbook, Version 4 (last version), 1953 by Radio Corporation of America. This is the epitome of books on radio circuit design, tubes, and just about every relating to the science of radio. Contains over 1,500 pages. Requires a PC with Windows to use. Nothing is loaded onto your hard drive to clutter it up more than it already is with useless trivial stuff. Runs directly off your CD-ROM player. You can read, enlarge, rotate, view, print a page, print several pages, print a chapter or if you have enough time to spend the rest of your life printing, you can print the entire book. Requires an Internet HTML browser to start it, such as Netscape or Microsoft Internet Explorer. The book is viewed as an executable file with a built-in digital viewer. You can see more data on this at http://www.radioera.com then choose CD's. The price is $ 62 + postage & insurance.

Another new book is the fabulous RCA HB-3 Tube Handbook. This is the motherload of all tube books and is comprised of over 7,000 pages and was printed as a loose-leaf handbook of 10 volumes. If you want tube data, than this is IT! Requires a PC with Windows to use. Nothing is loaded onto your hard drive to clutter it up more than it already is with useless trivial stuff. Runs directly off your CD-ROM player. You can read, enlarge, rotate, view, print a page, print several pages, print a chapter or if you have enough time to spend the rest of your life printing, you can print the entire book. Requires an Internet HTML browser to start it, such as Netscape or Microsoft Internet Explorer. The book is viewed as an executable file with a built-in digital viewer. You can see more data on this at http://www.radioera.com then choose CD's. The price is $ 75 + postage & insurance.

Check out all our boat-anchor CD publications. When you can find a Radiotron handbook they go generally for $ 125 and more and the RCA HB-3's go from $ 150 - $ 200 when and if you can find a complete one (and how would you know since they were a loose-leaf subscription service?).

The true value of any commodity is not what you insure it for, nor what you ask for it, but what you can actually GET for it at auction. There is lots of "old stuff" floating around in this world that is worth nothing; a very small percentage is collectible, a smaller percentage can you actually get money for.There is no more accurate form of valuation than an auction "sold" value. This item was worth what it sold for. The market has spoken.

The Internet/usenet is a wonderful research and marketing tool for items of obscure interest; it allows equal access to potential buyers for vendors large and small. Unfortunately we small sellers have to accept a lower return, especially on large items, than a well known vendor would get; this offsets the 'risk factor' that the buyer has in sending his cheque off to a faraway place to a relatively unknown vendor. Many potential buyers would not accept this risk.I suspect that in the right venue, the value of this item may actually be more than I received.

These facts are indisputable:
1: The Collins 55G-1 is extremely rare and collectible.
2: It sold at the price determined by the buyer, per the posted weekly schedule.
3: It was delivered promptly and well packaged.
4: RadioLeo was not the buyer.

From: Bob Miller <bmiller@calweb.com>
Message-ID: <35C52AE5.800D7439@calweb.com>
Source record: 101403
Cross-posted to: sci.electronics.equipment,rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.tubes

For Sale:
1 each HP410C multimeter with nice probes, original RF probe head, power cord. Condition better than average, good knobs and power cord. Could use a good Deoxit switch cleaning, interior very clean though. $125 w/o docs plus UPS on 12 lbs from zip 95827

1. each Triplett 630PL Multimeter, very nice conition, no cracks or grunge. Meter face excellent and meter face has no major scratches, cracks or blems. Ohmeter batteries will need to be installed. $60 plus UPS on 10 lbs from zip 95287

1. each Triplett 630PL as above but has a repaired crack in the front panel portion of the case. Repair is solid, but crack is noticable if you look for it. Otherwise this unit is super shiny and a good solid big scale VOM from the Good Old Days.
$35 plus UPS on 10 lbs from zip 95827

1. each HP3400A true rms voltmeter, nice condition, no major blems, flat to 10 Mhz, with power cord and copy of docs. $60 plus UPS on 10 lbs from zip 95827

1. each HP427A Multimeter, works well, AC powered, no internal batteries supplied, no major blems, average conditon for the vinage, $65 plus ups on 10 lbs for 95827

1. each HP 310 Frequency Selective Voltmeter, 1 Khz to 1.2 Mhz, selectable sideband and narrow filter available, good dynamic range >-100 dbm. Unit is about the same size as a HP312A, but quite a bit lighter. Good working condition, mechanical digital frequency readout. Internal Oscillator acts as a tracking oscillator for manual band sweep tests on DUT. Solid state design. Some grunge, but no corrosion and will clean up. $100 plus ups on 35 lbs from 95827

1. each Simpson 260 Adapter, AC AMMETER model 653. Simpson 260 VOM slides into the adaptor and provides for AC ampere ranges of 250ma, 1 amp 2.5 amp, 12.5 amp and 25 amp. No cracks or breaks noted. $40 post paid conus

Tnx for the read, folks

Les Logan made bugs and keys from the early 30s thru 1947 when they
sold out
to E.F. Johnson. Your 515 is toward the end of the run. The 515 is the
most
commonly found Logan bug. Four different makers have had the SPEED-X
line.
For more information on all makes and vintages of bugs and keys see
the
URL below.

EL84 is the European numbers, 6BQ5 is American. As far as I know E84L is made by Tesla (the old one) and usually comes in red or blue glass. There is also the 7189A which give a bit more power. All are interchangable.

One Eye jack

>Anyone know???
>

EL 84 and E84L were both made by Philips (and probably Mullard, too)
The are electrical interchangable and have the same ratings, but E84L
is a special quality version of EL 84. That means 10.000 hours
lifetime and maybe gold pins.
Valves with the European nomenclature of this kind often had their SQ
versions. An example is ECC 81 = E81CC, EC 88 = E88C, EF 80 = E80F
There are many exceptions: E83F is very different from EF 83 and so
on.

6BQ5 should be very similar to EL 84 and 7189 should be an uprated
version of this type.

Best regards,

Arnold Goksoyr

82. Collins R-388/51J-3 or 51J-4 help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-03 00:00:00 UTC
From: RR Kerr <robert.kerr@gtri.gatech.edu>
Message-ID: <35C622F0.A1EB9A6D@gtri.gatech.edu>
Source record: 101286

I have an R-388/51J-3, in which somone has removed the L105 coil and C110 capacitor. These form the input tuned circuit for the first RF amplifier for the 8 to 15 MHz bands. I know that C110 is a 5-25 pf variable ceramic NPO. I need to know the number of turns, and their spacing, on the L105 coil. I imagine that these components are unchanged in the R-389/51J-4.

Is there an industrious soul out there who would be willing to look in their radio and get me this info? Even better, is there someone out there with junk parts from this radio that would be willing to sell me the coil form and mount?

Thanks,
Bob

Hi All,

I've got an old Electrovoice 664 microphone I'd like to sell.
Cosmetically it is only fair, but it seems to work fine. No stand, just
the mic. Has high and low Z outputs. I've seen these advertised for more
than $100 lately, but this one is only $50 plus shipping. This would make
a great mate for your old boatanchor rig!

73,

Rob, KL7NA/W7

88. FS Collins 490T automatic Antenna Tuner and PS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-03 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <35C657AF.C6893792@calweb.com>
Source record: 101292
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale,

Collins 490T avionics HF automatic Antenna Tuner and associated 400 Hz DC/AC power inverter. The pair will allow one to operate the 490T on a nominal 28VDC power supply (5 amps unregulated but stiff), and then use with any HF exciter/transceiver/transmitter in the 400-600 watt range with a random lenth antenna system from 2-30 Mhz (actually handles 160 meters fine). Unit tested on a Collins 618T(3) transceiver and a Yaesu FT747 HF transceiver and it works like a charm. About three seconds to any frequency into a wet string (well just about a wet string). This is a Rolls Royce type of tuner with motorized vac variable caps, multiple motorized gold plated wire roller coils, and so on. With basic prints on both the tuner and the inverter, $450 plus UPS on about 35 lbs from zip 95827. I do not have cables for the 618T or other radios to this unit. Power connections are easy to connect to the unit and RF to and from the unit uses normal connectors and I will throw in some good type "C" connectors and cables for the RF side.

Tnx,

Bob, KE6F

Source record: 101407

Hi Don-

You probably know this, but you'll also need a Tektronix Type 81 or Type 81A adapter to use that L20 in a 585. It would fit directly in the 530 series and 540 series and 550 series, but not the 580 series. I know that you probably already have one, but just in case, I thought you might wanna go ahead and post something about that if you don't have one.

Also, you might keep an eye out for a Tektronix 1L20 plug-in as well as for the L20. The 1L20 is a later one with more accurate calibration in one or two places, I think. Also, I think there were a lot more of the 1L20 units made, but I'm not sure of that. I know that I've seen a lot more of the 1L20s that L20s. I've got an L30 but have never seen an L20 in person.

Oh, and you might also watch out for something advertised as a "Pentrix" L20 plug-in. Some of the early ones had both Pentrix and Tektronix on the front panel. Tektronix either bought Pentrix to get the line or bought the line from Pentrix.....can't remember which.... :-)

Great units, though. Absolutely incredible quality of construction and choice of materials. Top drawer performance too.

97. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6q330t$b4a@news.Hawaii.Edu>
Source record: 101410
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

102. SELL: R-390A & CY-979A cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-03 00:00:00 UTC
From: ross@hypertools.com
Message-ID: <35c52cf1.64626348@news.willapabay.org>
Source record: 101415

BAfolks -

For Sale: EAC R-390A with CY-979A/URR desktop cabinet.

The radio was built under the 1967 EAC contract (number FR-36-039-N-6-00189(E)), and is serial number 1479. The front panel nomenclature tag is missing, but the contract number & the serial number are stamped on the rear panel.

The audio amp and the power supply are both EAC, but I can't tell about the rest of the modules. The PTO is a Cosmos item. The power supply has squalid-state rectifiers installed inside the module sheet metal. The radio has the usual test point installed near the headphone jack.

The radio has a couple of scratches on the front panel where the aluminum shows. The panel is engraved, so it could be repainted if you are ambitious. Knobs are all original, but could use some attention as well. No bent sheet metal and no major scratches anywhere. No RF deck cover and no chassis covers (they won't fit inside the cabinet anyway), and also missing is the small cover over the power cord connections.

Both meters are present and working, but the AUDIO LEVEL meter has black lettering on a white face. The CARRIER LEVEL meter appears original.

The radio works on all bands, but some are hotter than others - on 14.22 MCs, a .3 microvolt signal will yield a measured 10 db S+N/N ratio on the AUDIO LEVEL meter. All six IF filter positions work OK.

The CY-979A/URR desktop cabinet is the correct one for the R-390A. This one is built by Taffet Electronics and is like new except for a minor bit of rust on the shockmount plate and a couple of small scratches in the paint. All the screening and all the louvres are perfect, and the paint matches the EAC radio color exactly.

I'm asking $550 for the radio and the cabinet, and will include a bound photocopy of the R-390A manual and both of the goofy antenna coax connector adapters (TWINAX male to C female & C male to BNC female).

This would be a difficult item to pack & ship, but you can pick it up at:
- either my home in southwest Washington state.
- or at the Tacoma, WA swapmeet on August 8th.
- or at the Longview, WA swapmeet on August 15th.

73 and thanks for the read
Dave Ross KA6EPI ross@hypertools.com

Thanks, Mal, it's a very kind offer, but it's not necessary as I was merely replying to someone else's request. I've spent a bit of time designing switch mode power supplies for some HP instruments, so I could cook something up fairly quickly should I ever need one.

You've just reminded me of one job in the past, it distributed power as a 40kHz sinusoid through a modular instrument system. The last version could handle 500W. I wonder if I've got any old boards kicking around, 73kHz ought to be possible....

> Old Engines never die they just.........

I know! My penchant is for Land-Rovers, though I have a rather young one at the moment. I've been blamed for penning (to the obvious tune..)

Oi've had a Land-Rover for twenty-five years,
And Oi've spent all my money on petrol and gears.........

Cheers
David GM4ZNX

> tend to be heavy. And could anchor a boat :-)

I thought they were boatanchors because many of the pieces came from the
navy, and had a little boat anchor insignia on them. That's my
understanding of the "boatanchor" phrase as well as generally being huge
and heavy.

I have the following "packages" (operative word here is "packages".. no splits until after G-burg... maybe!) for sale, pick-up in the Wash. DC area, prior to Gaithersburg hamfest:
Package 1:
Viking II, very clean chassis, good tubes, book, front panel a bit a bit worn but knobs, dials, meter, calibrations, etc, perfect. With 122 VFO (exc. cond.) and Dow-Key DK-60 $275.00
Package 2:
Hammarlund HQ-145, very nice condition, calibrator, book, (no clock), smaller Hammarlund speaker, works very well
Hammarlund HQ-170C, very nice panel, perfect chassis, perfect clock and bezel, very lo sensitivity, w/ clock and book.
Hammarlund HQ-180AC, clock, average front panel, works very well, book, smaller Hammarlund speaker.
All three, $600 , firm (at this price!)

Also have a Valiant I that I had to do a lot of work to get it operational. Sounds good now (phew!!). I got a perfect one, so will part with this one for $275 (That's right!) Pick-up only! Valiants abhor UPS!!

Again, pick-up in the DC, No.VA, MD area.

I have several of the following filter available. They are Collins part number 526-9892-010 and are 455 KHz USB filters. These are intended for PC board mounting. The following are the essential specs:

Fc: 456.9 KHz
Pass band: 3 dB 3.1 KHz
Stop band: 60 dB at 440 & 470 KHz
Zi: 1 K
Zo: 2 K
Insertion loss: 8 dB max
Dimension: 2.78" x 0.56" by 0.58"

I will provide copy of the specification drawing. These are all NOS in original boxes. Price is $ 35 each. Thanks - Mike

137. Help, To Identify Old Military? HF tranceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-04 00:00:00 UTC
From: adicker113@aol.com
Message-ID: <1998080417270900.NAA02813@ladder01.news.aol.com>
Source record: 101313

I have this old tranceiver that looks to me to be military but the outside case is missing, and not makers marks on the front so I cant identify it. I have gotten the reciever working, it uses 3 or 4 two digit tubes like 34, 33, 32. Ive seen old farm philco sets with these tubes (1 volt filaments). the transmitter section has only one tube, 837. I has a switch on the transmit side for voice or cw.
I have pic of it but i know not to post them here. If anyone can help me identify this set email me and i will send the pics to you or if anybody knows a page i can post these pics on. Id like to get the schematic so I can get it completely working. It'll be great for field day.
Thanks
Alan

Source record: 101318

Since this august group is always looking to increase their knowledge about electronics, boatanchor radios, tubes and the like, I thought you who might read this may be interested in two new technical book CD-ROMS just recently completed and ready for distribution:

The fabulous Radiotron Designers Handbook, Version 4 (last version), 1953 by Radio Corporation of America. This is the epitome of books on radio circuit design, tubes, and just about every relating to the science of radio. Contains over 1,500 pages. Requires a PC with Windows to use. Nothing is loaded onto your hard drive to clutter it up more than it already is with useless trivial stuff. Runs directly off your CD-ROM player. You can read, enlarge, rotate, view, print a page, print several pages, print a chapter or if you have enough time to spend the rest of your life printing, you can print the entire book. Requires an Internet HTML browser to start it, such as Netscape or Microsoft Internet Explorer. The book is viewed as an executable file with a built-in digital viewer. You can see more data on this at http://www.radioera.com then choose CD's. The price is $ 62 + postage & insurance.

Another new book is the fabulous RCA HB-3 Tube Handbook. This is the motherload of all tube books and is comprised of over 7,000 pages and was printed as a loose-leaf handbook of 10 volumes. If you want tube data, than this is IT! Requires a PC with Windows to use. Nothing is loaded onto your hard drive to clutter it up more than it already is with useless trivial stuff. Runs directly off your CD-ROM player. You can read, enlarge, rotate, view, print a page, print several pages, print a chapter or if you have enough time to spend the rest of your life printing, you can print the entire book. Requires an Internet HTML browser to start it, such as Netscape or Microsoft Internet Explorer. The book is viewed as an executable file with a built-in digital viewer. You can see more data on this at http://www.radioera.com then choose CD's. The price is $ 75 + postage & insurance.

Check out all our boat-anchor CD publications. When you can find a Radiotron handbook they go generally for $ 125 and more and the RCA HB-3's go from $ 150 - $ 200 when and if you can find a complete one (and how would you know since they were a loose-leaf subscription service?).

157. What's The Best GDO?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-04 00:00:00 UTC
From: Scott Holderman <aq485X@lafn.org>
Message-ID: <35C7F3AC.11FA@lafn.org>
Source record: 101333

I would like to get a grid dip oscillator for use in fixing old
broadcast band radios...

My questions are:

*Do I NEED one? (I already have a signal generator & freq. counter - but
I think a GDO would be a nice addition)

*What's the best one? I know a lot of people like the Millen 90662-A,
but these are a little expensive. Wouldn't a Heathkit GD1-B or simlar
type do the job for occasional use? (the EICO 710 might be OK, too,
but it looks just a bit too cheesy to me constructionwise)

*I assume that I would need one that basically covers the broadcast band
and common IFs (455,456 khz), so I think that would exclude many models
(Yes, I know the GD1-B requires the optional coil set for this).

Thanks,

Scott

Hallicrafters Fans:
The new Hallicrafters Collectors Association Web Site is:
http://www.reliable-net.net/~nb9m/HCA/index.htm

I've put it out earlier than planned to get input from users and members. The best sites are a composite of lots of ideas, and this is just the beginning. The idea is for everyone to get a feel for the organization so that, hopefully, they can be a part of it.

There WILL be problems with server space; either we will have to accept contributions/dues or perhaps someone has some space somewhere? I project that we will need about 10 Meg when the site content is mature.

We still net a Net Manager to set up the dates/times/freqs of our nets. Any takers?

Don't forget to send in those bios and pictures.
73,

Brad, NB9M

Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Hi everyone. I am looking for info on/photos of Hallicrafters
receivers similar to the S-120.
The models I am interested are 5 tube, 4 band superheterodyne receivers
with a large
slide-rule dial, BFO, and bandspread. They covered the frequency range
500 Khz to 30 Mhz
in 4 bands. The upper 2/3 of the front face is all slide-rule dial, and
the lower 1/3 has the
Bandspread, BFO, volume, Band switch, and Tuning knobs, BFO on/off and
Standby/On
switches, and Headphone jack. I am particularly interested in a model
that I used to have. It
might have been a WR-600, but I am not sure. It had a brown
wood-grained metal top, gold plastic front, and pressboard back.
Probably made in the 60s, maybe late 50s.
Photos of almost any Hallicrafters or National shortwave receivers are
welcome. Please send these via Email, so as not to clutter the
newsgroup.

Hello Martin .... You may find info regarding your Hallicrafters Model S-120 Four-Band Communications Receiver from W7FG VINTAGE MANUALS. The Telephone number is 800-807-6146. Address is 3300 Wayside Drive, Bartlesville, OK 74006. EMail w7fg@w7fg.com They also have a Home Page: http://www.w7fg.com. I have purchased many REPRINT manuals from them and they do a very professional reproduction. Also .... if you have ambition about cleaning up your S-120, please DON'T do what I did and wash the glass slide rule frequency dial .... the white print just washed right off with mild dish soap. Good luck & 73 de Jim W4ONO

Scott -

Probably not. I've used mine a lot for transmitter work but have yet
to find a receiver with coils so far out of tune that they needed a
GDO to be put in the ballpark. If you are custom-winding replacement
coils one could be quite useful. The lack of general use of GDOs in
radio service work is testified to by their general lack of the
frequencies needed.

>*What's the best one? I know a lot of people like the Millen 90662-A,
>but these are a little expensive. Wouldn't a Heathkit GD1-B or simlar
>type do the job for occasional use? (the EICO 710 might be OK, too,
>but it looks just a bit too cheesy to me constructionwise)

It depends on what you are doing. In my career as a broadcast engineer
the GDO was an important tool, so I own a Millen. Many folks like the
Measurements Corp. Megacycle Meter (also a professional instrument and
pricey), and some own the B&W GDO. I know a lot of commercial
engineers, though (and of course tons of amateur ops) who have used
the Heath and EICO GDOs (Allied also mage a Knight unit). I used an
EICO before I found the Millen.

>*I assume that I would need one that basically covers the broadcast band
>and common IFs (455,456 khz), so I think that would exclude many models
>(Yes, I know the GD1-B requires optional coils for this) .

All of the GDOs I am familiar with need optional coils for Standard
Broadcast use except the EICO 710 (starts at 400 kHz) and the rather
unusual Aerovox 97 LC Checker (starts at 72 kHz). The Megacycle Meter
needs a low-frequency head as well. One reason that I use a Millen is
that I was able to wind my own low frequency coils for it.

I read somewhere that the L4B may be modified for 160m and also for substantially more 160-10m power output (cost $265.). Is there also a QSK mod? Anyone have the details of these mods and also a sense if the power mods might stress the bandswitch and other components. If these mods are reliable I may be in the market for one.
Thanks & 73, DavidC AA1FA

Hi Dan-

Daniel Langston wrote in message <35C928C0.3A25@accucomm.net>...
>Looking for a source or dealer for 2 watt carbon composition resistors to
>restore an old BA.. The only thing I've found in the 2 watt class are
>metal oxide film..Will these work as a direct replacement for the carbon
>comp?

Not necessarily. It depends on the application.

I'll give a case in point:

Some years ago a buddy of mine was working on a power supply for a Tektronix Type 555 dual beam oscilloscope. The problem at hand was a blown carbon resistor [2 watt, I think, but definitly 2 or 5] in one one of the power supply sections.....225 volt, or 350 volt, I believe.

He went to the local parts house and could only get metal film resistors so that is what he bought.

Installed the right one, and the scope worked. Once or twice. On about the third time he fired it up, the metal film resistor gave up the ghost and opened.

So, he installed another one. Same scenario!

At this point, we decided that we needed to watch the current inrush on a peak-hold meter to see what the max inrush on turn-on was, and it was way more than either of us would have expected. It's been some years since then, and I've forgotten what the max peak inrush current was, but it was quite high. I've got better current probes now, and it might be fun to hook `er up and see just what it looks like....

So.....we theorized that maybe that metal film resistor couldn't take that sort of transient current, and we "mined" an original replacement [carbon] from another power supply.

It's been in the scope for many years now, and has never failed!

So, we discovered a characteristic weakness of metal film resistors that I had never heard of before, and neither had he.

Since this was most definitely a BA oscilloscope [over a hunnerd tubes and pulls 1050 watts!] and you said you are overhauling a BA, I thought you might be interested.....

Oh, and from that point on, we have both hung onto junker equipment whenever we'd see one with a bunch of large carbon comp resistors in it! ;-)

If you need one, let me know and I'll see what I can come up with.....

73 and GL

Tom AE5I

PS: Say, are you from the Peach State? I think we've talked before.....
:-)

I have a Kenwood TS-450SAT that a qualified tech just went through and repaired. It runs nice, has a few nicks and wear, includes mic, power cable, and manual, and is my spare rig.
I need an amp that will do 160-10m, preferably has QSK (though I can do that mod), a pair of 3-500z's seem good as I would like full power key-down.
Equal or better tube configurations considered. Will consider amps needing work, will consider homebrew amps.
Would prefer to trade my TS-450SAT one-for-one, or plus a little cash for the right amp. Will also sell the TS-450SAT outright for $775. shipped conus.
Thanks & 73, DavidC AA1FA

Have about 50 used 6 and 7AH 12 VDC gel cells for sale. All load
tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's
on the QRP mailing list and all have been very satisfied. Had a few
damaged in shipping and one came back DOA which I replaced for the
fellow free of charge but that's it. I am the service manager for an
alarm company and we change our customers batteries every 3 years as
preventive maintenance. These used cells should provide another 2 to 3
and probably longer service if used and recharged properly. Cells come
fully charged and are ready to go. They can be recharged with a simple
wall wart charger available at Radio Shack or a 1 amp automotive
charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS (SOLD OUT)
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

Images of the cells can be seen at:

http://www.usol.com/~tje/yuasa6.jpg Yuasa 6ah

Source record: 101193

I am looking for a 4B32 rectifier tube. The one I am looking for is a JAN tube manufactured by United Electronic Company.

This tube is straight sided and looks like an 872 that it is a substitute for. It is different than any other 4B32's I have seen in that it is straight sided envelope.

Please advise . 73 de Ken NA0Y e mail na0y@netscad.net

August 6, 1998

Alan,

Nice to know somebody remembers Cromemco. Microcomputers have advanced and matured fast in the last thirty years so that a "sci.antique.microcomputers" dealing in everything about "antique" microcomputers should be a good outgrowth out of interest in electronics.

>If you have an old Cromemco Z-1 or Z-2 or something close to it and
>you are interested in digging it out of the corner, let me know. I'd
>like to buy one or the other and we could work out an incentive for
>you to go dig it out out.

The Z-1, Z-2 looks and weighs in like a 'boatanchor'. You must be into collecting. Good luck. I saw once a complete set of the series in one of those fund raising used-stuff stores for something like twenty bucks. Discouraging prices reflecting the demand for the stuff but it disappeared overnight. I didn't need it, I still had my own still sitting in the computer room much like an old vacuum tube set. Takes up too much space anyway to get another one, even for collecting. One day, I'll fire mine up again just for the 'll of it to stare at the cursor. :). The thing was like the Collins in its heyday. It cost a lot more though. And the software choices were very limited. Cromemco disappeared as part of another company. The S-100 bus design microcomputers were overcome by IBM, shrinking demand, and plain economics.

You just missed it. The sale is on the first Saturday of the month from
'as early as you can get there' until about 12:00pm.

This month with the temp over 103F, most people were packing up and leaving
by 10:00am. Hopefully Septembers sale will be better.

Had a Swan 350 in the mid 60's. Except for the drift problem was
excellent rig. WONDERFUL transmit audio too. The drift is the only
real issue with these radios.

Cross-posted to: rec.audio.tubes,rec.radio.swap,rec.radio.amateur.boatanchors,ga.forsale

My dad does volunteer work for the
Friends of Disabled Adults.
The FODA thrift store has a Hammond E-311 tube type organ
to dispose of. The store is in Atlanta Suburbs.
Phone 770-414-8903

If you are local you can probably pick it up cheap!

The organ does play. It will need a little work as most older tube
stuff does.

If you want shipped you will have to have picked up by a moving company
as they are NOT set up to ship stuff. If you ask them to ship
and they say O.K. it will be a mistake by one of the volunteers who does
not know better. So, please do not ask them to ship. You will only
be disappointed later. NO SHIPPING!

My Swan 350 did drift. It had a nickname of the "Swan three drifty". The problem was that the vfo is high (12mhz on 40 meters for example) and the vfo coils and compartment expands as the rig heats up, causing the drift. It will eventually settle down but still required an adjustment every so often to stay on frequency. If you use the external vfo then it's rock solid as the vfo osc is a transistor and no heat. I couldn't find one so just moved the vfo transistor and coils to a separate box outside the rig to solve the problem. People used to complain about the sweep tube finals, but I never had any problems with them and got long service with them. But of course you can't use long tuneups or your tubes will go sour. 6146's they ain't. Although it puts out a good cw signal the filter is too wide for this and further there is no offset control so the rig is not recommended for cw. But for SSB it's great. I never had a Drake so can't compare.

I've had several Swans - my favorite was a 500CX. It talked big with fine audio. Touchy on tune-up and won't take much abuse. If I found a Swan 500CX in good condition I would buy it to have as a glowbug spare. No need for an amplifier with these rigs.

They did tend to drift, so I never turned mine off (except for vacations). The idea worked pretty well.

CONAR Tube Tester, Model 223, with assembly and use manual.

Appears to me to be a tester part of a National Radio Institute course. Seems to be well made/soldered.

Suitcase it is in is wood it seems covered with leatherette. Very good conditiion with a few scrapes but no tears or breaks. Handle metal hardware is rusty but the handle is fine and the latch for the case is rust free.

The inside looks very good. Shiny panel, near new looking knobs, slight blemish /scrape on meter plastic cover which doesn't affect the use and is not bothersome.

Original ILLUMINATED roll chart is dated 1971 and moves freely. Update manuals with dates of 1974 and 1978 are almost like new. Has Compactron socket.

Seems to work fine. I tested a 8FQ7 which I pulled out of my tube box at random and it's an easy and quick tester to use.

It will be 15-20 pounds to ship after I box it well.

$35 plus shipping from San Jose, CA area, ZIP 95070.

Will ship UPS COD if you pay the $5 COD fee. Otherwise $35 + allowance for shipping 20 pounds in a postal money order. I will refund any unused shipping.

Ian, K6SDE
San Jose, CA area

I remember in the late fifties just before I got my ham licence there was a UHF tranciever called the Vocaline that was advertised in the back of Popular Electronics. I think the price was real cheap like $17.95 or so and sold by some company called Western Electronics(or something like that). 20 years ago I bought one at a swap meet for $.50 and looked inside. No crystals!! The thing was an LC oscillator/multiplier etc. Since I didnt have a schematic I couldnt quite get the whole circuit down. When I was in High school I wanted one of those things really bad. Could anyone tell me if those things worked at all?

Dennis

If you look in the ARRL handbooks from the early 60s you will find a
432 transceiver design that used a Nuvistor tube as a super-regenerative
receiver; the Nuvistor also served as a modulated oscillator
during transmit. It used a few transistors for the audio stages.
No doubt the Vocaline is designed along a similar vein, using one
tube for the super-regenerative detector, and as a modulated oscillator
during TX, with a tube or two for the audio section.
The set would work, to some degree, probably offering a communications
range of a few miles using simple antennas. The design is out-moded
by today's standards--although it would be fun to own a pair of them
for nostalgia's sake!

Pete

Isn't the carrier balance control a function of the balanced modulator, which exists on both phasing and filter type rigs? It just stood out on the Swan cause they put in on the front panel. I thought the SWANS were filter type. And it seems that they had a broader filter, maybe 2.7 Khz Vs 2.1 Khz on some others, accounting for their superior audio.

I'm a CW guy trying to recall stuff from 30 years ago, so take these facts with a grain or two of salt.

236. NEED: YAESU FTV650B MANUAL/SCHEMATIC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-06 00:00:00 UTC
From: RHJ <Russja@stratos.net>
Message-ID: <6qdi2h$nv6$1@supernews.com>
Source record: 101219
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.boatanchors

Hello All,

Well I recently purchased a YAESU FTV650b 6 meter transverter for my 101E.
I am trying to locate a manual and schematic for it prior to blindly hooking
it up.
W7 has a manual but no schematic. I would be happy to reimburse for copying
and
shipping expenses and something for time. Looking forward to hearing from
someone
out there.!

Tnx es 73,

Russ --- W8RHJ

237. Manual needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-06 00:00:00 UTC
From: KQ6LB <jimallen@cup44ux.cup.hp.com>
Message-ID: <35CA5311.2AA3@cup44ux.cup.hp.com>
Source record: 101220

I'm in dire need of a manual for a Lakeshore Phasemaster II
transmitter. I don't want the one for the II A or the II B. I need the
one for the plain Phasemaster II. I'll pay copy/shipping charges. If I
can't
find a manual, getting the operating instructions would be great.

Regards,

Jim

238. FS: Fisher and Dynaco tube items

Newsgroup: rec.radio.amateur.boatanchors

8/6

For Sale: Fisher and Dynaco

Dynaco ST-70/ PAS-3/ FM-3

ST-70

Fully Rebuilt to stock specifications with new resistors, new film caps, new internal wireing, gold RCA jacks, binding posts and AC cord. Originally a factory wired unit. Some rust on the transformers. Shiny chrome. Brown cage. Strong quad of EL-34, Dynaco branded 7199 and Mullard 5ar4. Includes copy of manual and my personal notes file (100+ pgs).

Works and Sounds great! This is truly a "plug and play" unit!

$375.00 + shipping

PAS-3

This is an original factory wired unit in very good condition. It is stock.
In good working condtion and sounds wonderfull.
Includes copy of manual and copy of my personal notes file.

$160.00 + shipping

FM-3

This is a good original and stock unit. Strong eye tube.
Wonderfull sound- makes FM enjoyable!
Includes copy of manual and copy of my personal notes file.

$140.00 + shipping

I will sell as a trio for $625.00 + shipping

Fisher X-100 integrated amp

This unit is in good working condition. NOS powertransformer from the Fisher Doc.
New coupling caps. Just back from tech check up. Includes all tubes.
Brass face is overall clean with some corrosion around knobs. Some of the knobs are MIA
No case

$150.00 + shipping

Please reply to: rl1856@ix.netcom.com

Thank you,

Ross Lipman

239. Re: Opinions of Swan radios?

No, your memory is not fading. All the Swan rigs used crystal filters,
and not phasing.

To add to other's comments about the drift, there was an article about
this in Ham Radio at one point. I don't recall the date, but it
was after ithad gone to the large format. I don't recall any details,
but it was a number of pages long.

Source record: 101223

I can picture that transceiver, but I sure can't find the article now.

That sort of rig helped to populate the bands above 30MHz in the
early days. Portable rigs that used one tube for both receive and
transmit, which were simple to make and relatively cheap. I recall
seeing an article reminiscing about the 112MHz band, and showing
a circuit like that. Undoubtedly such circuits were used on the 56MHz
band. As the rules tightened, and the frequencies where unstable
oscillators were allowed were moved up to the next band, the transceivers
would follow.

I thought there was always some debate about how much of the modulation
of these rigs were AM and how much was FM.

There is no place for them on the bands these days, though there is a lot
to be said for such simplicity. I would think the modern day equivalent
are the gunnplexers in the microwave bands.

Source record: 101233

I'm not the greatest guy to be the defender of the Honor of Swans....but, here goes.

I bought my first Swan in 1967, and kept on buying them for a total of seven different transcievers. Today I still own and use regularly a 250 and a 500.

Yes, some of those radios did drift a bit, but there are ways of dealing with frequency wanderings. One of the best ways is use of the outboard VFO. Another, as previously mentioned is to leave the rig on, or in my case, turn it on ahead of time when planning to operate. And there a whole list of possible mods and "circuit improvements" (not recommended by myself)

An analogy: When Richard Nixon resigned, his vice-president was sworn in with the remark, "You're getting a FORD, not a LINCLON!"....had he been a ham, he might have stated, "You're getting a SWAN, not a COLLINS!"

..and that's my two cents worth.

Bob, w6lac

Wanted Heathkit items. Working or not, good shape or poor shape. I am just a closet collector and like to play with the old Heath stuff. Not looking for any items in particular, also cannot afford to pay high prices for the stuff. So if you have anything sitting in the corner that you are not using let me know what you have and what you may want for it.

Thanks,
Chris KX0Y

265. Any practical applications for SUB MINIATURE TUBES?

Hello, group, as the header asks, are there? I have a good quantity of sub-mini triodes and nuvistors, and I see some go for a good chunk of cash.
I could provide mine at a good price, but is there a practical application?
Please add to the thread...
Thank you,
Joe Pratt, Tubecntral@aol.com

I have a bunch of Swans. They may not be as classey as a "C" line and be a bit drifty, but I love to get the audio reports - they sound great. My top of the line Swan is the 700cx with the optional ss-16 filter. Puts out 450 watts and I work what I hear on 20 and 15. Considering you can pick up a 350 or a 500 for maybe $150, you can do a lot of ham radio for only a little investment. These two also use 6HF5 tubes for finals. Can be had for only $12 each. Back in the 60's, my first real radio was a 270B. I managed OK. My father got his DXCC with it.

Dennis--

I remember the ads, too. It ws a Class B CB rig--Class B was one channel
on low power UHF.

I'm surprised the FCC permitted a rig without crystal control!

Don't know anyone who actually got a pair on the air. A single unit was up
for auction on e-bay a few weeks ago.

Christopher

> I remember in the late fifties just before I got my ham licence there was a UHF
> tranciever called the Vocaline... Could anyone tell me if those things worked at all?

My first exposure to 2-way radio was a Vocaline set a friend's dad had in his car; the other set was in his basement. I thought it was just about the greatest thing I had ever seen (I was 9 at the time). He even let me talk over it! It began a lifetime love affair with radio that continues unabated (36 years as a ham radio operator, and I still think it's fun!)

Did it work? Well, sort of. You should boot it up just for old time's sake, but don't count on range much greater than a few blocks. My recollection is that the longer you left them on the better they worked; the crystals were drifting into the passband, I guess. Best of luck.

I had a pair of those on the late 60s and yes, they did work to a certain
extent. A friend of my father's gave them to me, he thought they were CB
transceivers (which they actually were but operated in the 460 mHz range
where the Class B CB band was)

There is no crystal as it was a modulated oscillator design. I saw an
article I think in 73 magazine on how to pad the oscillator down to get it
into the 432 Mhz range. The receiver was a superregen. I actually got them
working somewhere on the 432 band but it was some combination of AM/FM
emission and actually made a few contacts during an ARRL VHF qso party.
Everyone asked what the problem with the rig was :) These radios had
quarter wave whips attached to the box, but another ham fashioned some
kind of antenna coupling circuit so I could use a 432 beam fed with coax.
I worked stations out to about 10 - 15 miles this way (Philadelphia area,
good amount of 432 activity then) I never had a way to measure the power
output but it was probably less than a watt.

They are probably of no practical use today except for curiosity value.

Hello group ....

As Doug W4DXV mentioned in his comments .... I also have a Swan 500CX that I keep on 75 meters. It out performs my Kenwoods and Collins. I use a D-104 mic. Have replaced the T/R relay and re-capped areas to keep drift down. The manual instructs you to warm up for 30 minutes or more .... like most vac tube rigs.

You'd better clarify whether they are sub-miniature tubes, or Nuvistors.
The former were were small, an inch or maybe an inch and a half long,
glass, and had wire leads coming out one end. Nuvistors, made only by
RCA I thought, were in metal, about the size of the tip of a small
finger, and had very small wire leads rather like transistors.
Subminiatures were designed to use up little space; Nuvistors did
that but but were designed for other things such as low noise figure.

I'm not sure how much need there is if someone is building something,
though I recall someone in the past month or two posting a message
in rec.radio.amateur.homebrew about building a Nuvistor converter.

But undoubtedly there is use for both types of tubes in keeping older
equipment going. There are all those old Motorola lunchbox-style
transceivers that used subminiature tubes. A lot of converters used
Nuvistors once they became available, because of there good noise figure;
at the time that they came out transistors were still not good enough.
I thought some otherwise solid-state Tektronix oscilliscopes used
Nuvistors in their front ends. If the tubes aren't there to replace
wornout ones, this equipment goes out of service.

>There is no crystal as it was a modulated oscillator design.

That is correct. They did, however, have one very clever little twist. A sort of hybrid tuned line cavity resonator set the frequency. Attached to one side was a small bi-metallic strip. This strip acted as a temperature compensating capacitor, maintaining the frequency of the unit within reasonable limits. I remember studying this and thinking it was darn clever for its day.

I have picked up a Swan 500CX in a trade I have made.The Swan was not part of the deal I have picked up a Kenwood TS 820 with the VFO and some other things on the way out the door the guy said OH here A Swan I had it laying around take it. The Swan was the best part of the deal I might add that I have blown out the finals trying to load it up into a bad antenna. As soon as I can find a set of finals I will be back on the air with it. this is a greate rig and I have no plans to get rid it.
Bud.

I have two SX-28 receivers awaiting restoration. I would like
to correspond with others who have had extensive experiences
in restoring these radios, especially in the following areas:

Front panel:
1 dealing with light rust bleedthru on alligator finish.
2. methods to restore the red and white lettering.
3. cleaning up rust on dial lock hardware

Chassis:
1. any general advice on restoring chassis appearance to
original factory appearance.

Would like to correspond with other owners who have worked
on these beasts. I have some ideas on how to proceed, but
wonder if there are better methods that others have developed.

Sorry, neither set is for sale. I intend to restore and use both.
One is in fairly decent condition and needs minor work. The
other sat in a humid California garage for 30 years and needs
serious work (besides being damaged by UPS0>

Please respond to this post to:
tobin@csrlink.net

I recently bought a Hammarlund SP-600 JX14, and it's full of black beauty capacitors. I seem to recall a post not too long ago that referred to a recap kit that someone is selling.

I'd like to replace the black beauties, so if anybody knows who is selling the kit, the information would be greatly appreciated.

I'm not terribly talented electronically speaking, so I'd also like to know if instructions are included, and if so, if they are "dummy proof."

Thanks in advance and 73's!

I have the following Microphones for sale:

Astatic Microphone Laboratories D-104, original 1940's vintage, with metal label and 4 screw holes in the outer band for hanging in a spring mount ring. -- good condition--$70 shipped

Astatic DN-HZ on G-stand. 1940's/50's vintage of the more modern Astatic D-10. About a 6 on a 1 to 10 scale. Element is there but un tested--$45 shipped

Turner 95D--hi Z. Similar to a Collins SM-1 desk mike. Pitted on one side of the head piece. All other surfaces good.--$65 shipped. http://www.wa3key.com/slacc.html#sm1

Electro-voice 605 dynamic on EV-428 stand--1950's vintage. Chrome is excellent. Stand has toggle switch mounted in base.--$45 shipped

Lafayette PA-46 dynamic. Similar to an EV Slim-air but barrel changes diameter in a curved fashion. Real nice shape. Wind screen at tip is covered by a 90 degree black cross. Have original box, unterminated cord and papers. All in excellent condition--$45

Contact Rick at nexus15@flash.net.

Thanks..Rick in Houston

> real issue with these radios.
>
> Steve W4LW
> The Swan rigs had problems with drifting because rather than use a fixed
crytal oscilator (can't spell) they used a bandswitching arrangement that
required the vfo to operate at several differnt freq. that is not
the typical situation of multiplying to another freq. in which the vfo
would funtion only at , say 5595 to 5895 as an example and mutiply to
another freq... the rigs worked fine for about 3 or 4 years until the band
switch became old and , hence not making good contact .. the drifting
started... there for the problem is in the bandswitch .. and nothing else.

WANTED! ALIVE AND IN GOOD CONDITION, AN/UPX-6 CAVITIES. THESE UNITS ARE THE HIGH POWER TRANSMITTER SECTION CONSISTING OF THREE CAVITIES WITH 2C39 TUBES IN THEM. THE RADIO TRANSMITTER/RECEIVER IS A RT-264 ( ) /UPX-6.

If you have any of these or know someone who does, I'm interested in purchasing some. They must be in good condition, I do not want any with broken feedthrough caps or that are physically beat-up or severly scarred. If the screws are all rusted up that is also a problem. Of course it all depends on the Price if the price is right and they are in fair condition I may purchase them after their condition has been thoroughly described to me.

Thank you in advance for your assistance with this matter.

Regards
Don W6PJJ.

Message-ID: <RNpy1UmbN7RO091yn@cts.com>
Lines: 25
X-Status: U

I'm trying to put a Hallicrafters HT-44 Transmitter back into service
and I have a couple of questions.

1) The manual I have (a reproduction) states that one should use
a high-impedence microphone. Does anyone know what that means
(value-wise)? 1K, 10K, 50K ???

Any recommendations for a "boatanchor" microphone to go along
with this rig?

2) Cleaning. Any info or a faq on how to clean various components
without damage?

3) Tubes. I've found a number of places (using the net) that sell
tubes. Have you found a company that you are happy dealing with?

Thanks for any help you can provide.

Doug - WB6AJX

For tubes, Antique Electronic Supply in Tempe AZ,
www.tubesnmore.com has a very good selection and
good service. Many times you can find the tubes
you want on the net or at other sites, and sometimes
a bit cheaper, but with a little more work.

Any of the old Shure mikes with the hi-lo impedance
switches should work fine.

Brings back memories.... did a stint as a radio
counselor at a summer camp back in '72, had
to bring my own radios -- the SX-117/HT-44 pair.
Bought the radios well used *then*, 26 years ago....

>...and I see some go for a good chunk of cash.<

Numbers, please? Most are very common and have been fetching pennies...kindly post examples for our edification.

Nuvistors were used in many things as low-noise preamp stages, and submini's are found in old hearing aids, some Collins PTO's, certain battery-powered MIL things, and God knows where else. Many of us have hundreds of these things. Please elaborate.

>
>1) The manual I have (a reproduction) states that one should use
> a high-impedence microphone. Does anyone know what that means
> (value-wise)? 1K, 10K, 50K ???

50K+... in my HT-32 the Zin is roughly 100k.
>
> Any recommendations for a "boatanchor" microphone to go along
> with this rig?
I use a Shure 55 and get reports of good audio. I've also tried other Shure
and EV mics, but according to some comparisons I've done over the air,
people tell me the 55 sounds best.
>
>2) Cleaning. Any info or a faq on how to clean various components
> without damage?
I guess it depends on what you're trying to clean. From experience, always
test any cleaning solution where it won't show first!
>
>3) Tubes. I've found a number of places (using the net) that sell
> tubes. Have you found a company that you are happy dealing with?
I've ordered from Antique Electronic Supply and RF Electronics and been
happy with both suppliers.

Ihave the following FT-243 crystals in that range:

7073.333
7125
7250

lots in the 6+ MHz range that could be ground up in frequency...
(anyone remember how we used to do that?) ;))

contact me directly to work out something.

Jim W2JC

>>Anyone have a Heathkit WWV receiver that they produce that you cold also
>>hook up to your pc for accurate time keeping??
>>
>Nope.
>
>This is off-topic for a newsgroup dedicated to vacuum-tube Ham equipment,
but I
>will mention one thing: The GC-1000 Most Accurate Clock used to be
referred to
>by some people at Heath as the "world's most expensive clock radio--and it
>receives only one channel!"

The original Heath "Most Accurate Clock" received 5, 10, and 15 MHz,
scanning them for the best
signal. Later models received only 10 MHz. It also didn't work all that
well. The WWV time code is very, very inefficient,
sending only one bit
per second, requiring a full minute to send a date/time group. The Most
Accurate Clock required
two consecutive error-free groups to update, so any fading, noise, qrm, or
anything else that caused
it to loose even one bit would keep it from updating. Mine would go days at
a time between good
updates. Also, there was no backup battery, so any power loss caused it to
loose time and start
all over. There was no way to set the clock manually; you just had to wait
(days, weeks) for it to
get good data from WWV and reset itself. The new clocks that receive WWVB
VLF signals work
a whole lot better, and are very cheap; Radio Shack sells them for around
$40. I have a similar one
from Oregon Scientific, and it's always in sync. Best of luck.

345. FS: Microphones

I have the following Microphones for sale:

Astatic Microphone Laboratories D-104, original 1940's vintage, with metal label and 4 screw holes in the outer band for hanging in a spring mount ring. -- good condition--$70 shipped

Astatic DN-HZ on G-stand. 1940's/50's vintage of the more modern Astatic D-10. About a 6 on a 1 to 10 scale. Element is there but un tested--$45 shipped

Turner 95D--SOLD

Electro-voice 605 dynamic on EV-428 stand--1950's vintage. Chrome is excellent. Stand has toggle switch mounted in base.--$45 shipped

Lafayette PA-46 dynamic. Similar to an EV Slim-air but barrel changes diameter in a curved fashion. Real nice shape. Wind screen at tip is covered by a 90 degree black cross. Have original box, unterminated cord and papers. All in excellent condition--$45

Contact Rick at nexus15@flash.net.

Thanks..Rick in Houston

Source record: 101037

I have a very nice TR-4C for sale.
I would say its at least an 8 on a 10 scale. The face is perfect.
Knobs, glass, dial, lettering all in great shape. Full output on all
bands. (200 watts on 80 meters). I say an 8 only because I think the
cab was repainted. But it looks great.

It comes with the AC-4 PS. That's the one without the speaker.
Also a Turner plus 3 mike. (came with it when I got it.)
Covers all of 10 meters. I think the TRs came that way but not sure.
Just FYI. All works fine and in good shape.

I'm only selling because I want another drake and can't afford both.
I require prepay and postage. If the rig is not sold by the 28th its
going to Boxbourgh flee. I will pack it in two boxes with the stuff
they sell at UPS. It should get there safe. (I've done it before.)

If you want, make me an offer.

As I wrote that, I wondered if anyone had made them also. I can't think
of anyone but RCA. However, it's possible that RCA gave or sold the
manufacturing rights to some other company in one or more other countries.
Or perhaps there is enough of a need for nuvistors that Hitachi took
over after RCA got out of the tube business?

I have no first hand knowledge. I just remember once looking in something
like a 453 and being surprised that there were nuvistors. That scope
had pretty good specs, even today it's fairly good, and it would be
a shame if someone scrapped theres for a lack of a nuvistor.

ONe book I don't have is an RCA Tube Manual. SOmeone might want to look
in their's and see if anything interesting is said about nuvistors.

I just noticed something. We are capitalizing "nuvistor". I'm sure
I did it because I thought it was something only from RCA. But I could
easily put my fingers on an "RCA Ham Tips" from 1962, for a "Nuvisotr
Two-Meter Transmitter" (2 7586 triodes, running as an oscillator and a
tripler, and two 7587's with plate caps in the final amplifier running
7 1/2 watts). RCA does not capitalize "nuvistor", though it does put
"RCA" ahead of the word each time it's used.

Sounds like you should have really owned one.
I had over the years a 350, 500, 700 and the only real complaint
I had was reciever sensitivity. I still miss that smooth main tuning.
Can't find that on these new radios. Of course, if you compare it
to the newest and latest anyone will think Swan, Drake, Galaxy,
National, and Hallicrafters is junk.

368. Swan frequency drift

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-09 00:00:00 UTC
From: Gary Smith <standard@pcs.mb.ca>
Message-ID: <01bdc33f$4b170e00$LocalHost@gary>
Source record: 101087

I've read with interest the thread regarding the Swan vfo drift debate, and figured I would comment on a few of the details.

There is a very good article starting on page 42 of the August 1979 issue of Ham Radio which deals with the problem of frequency drift. An afternoon spent will be rewarded by positive results. As the article states, most of the drift is caused by the changing vfo coil dimensions as your radio warms up. Although it will never be as stable as your new solid state radio after the fix, the drift will be reduced to a tolerable amount.

The bandswitch is part of the problem. The chassis is not as strong as it could be. Tighten all the fasteners around the vfo compartment, then lubricate and clean the band switch. The chassis twists slightly when the switch is turned and this can change coil dimensions.

Don't compare the Swan to your Collins. Herb wanted to make an affordable, high power HF rig that worked. Collins wanted to make a top quality rig which resulted in much higher costs. Both schools of thought are fine, but different. I like both brands.

The Swan's offer good value for low bucks. They can be found selling now for between $50.00 and $250.00.
If you are just getting into the hobby, want to have a spare hf rig, or collect, 150 bucks c/w a power supply will let you work the world.

Have fun!

Message-ID: <35cd2796.1147822@nntp2.uunet.ca>
Source record: 101090

Hello:

I have the following 2 Electrovoice 419 Mic Bases for sale. These
are the bases that everyone wants for their EV 664 Mics.

Prices are in USA Dollars...and Shipping is extra.

Please email me direct at..... radiorob@serix.com to reserve
either of these Mic Bases.

Thanks...ROB.

##
Electrovoice 419 Base (For the 664 Mic!!) NEW in Original Box..with
Original Hardware. This is the Heavy Grey Metal Base...that everyone
wants for their Electrovoice 664 Mic!! These are very hard to
find...in any Condition...this one is New in the Box!!

NEW....has a few Minor Scuffs....but this has never been used.
REAL NICE!!

PRICE........$125.00 USA
##
Electrovoice 419 Base....as above.....But this is a "REPLICA". These
were made by a couple of Guys in Michigan ....and were formed from an
exact Mold of the original...except they are made of Solid BRASS. Less
than 20 of these were made.....due to the fact they had to all be hand
Finished. The majority of them were painted Black Wrinkle and had a
Red Collins Logo on the front.......but this one is unpainted with no
logo. It is Highly polished Brass....Gold Colour..with somewhat of a
Grain running through the Metal. Looks pretty Neat!! This one may be a
One of a Kind!!

NEW...Never Used...but looks somewhat Rustic due to the Material and
Finish.

PRICE.........$100.00 USA
##

> Chuck, NT3G

from my "giant info card file" of the last 4 decades:

BC-348 Receiver

200-400 Kc, 1.5-18Mc (wasn't Hz back then!!), AM, CW, 6 bands

TM is AN08-10-180
AN08-10-112

power input: 28VDC, 22VDC @ 70 mA

output audio is 300 or 4000 ohms impedance

see 73 Magazine, Sept. 76, p. 84 for circuit update;
73 Magazine, June 64, p. 88
Surplus Radio Conversion Manual, Vol. 1, p. 22

hope that helps some...

Hello,

I have the following tubes out of an old Emerson entertainment center (television and receiver/tuner). Not having any tube reference manuals (but I am a tube lover owning a tube preamp and tube monoblock amps), can anyone tell me if any of the tubes listed below are desirable for sonics and/or for use in audio tube equipment (assuming the tube(s) check out OK on a tube tester)? The tubes are:

Item # Manufacture Type Made in (with markings)

1 Dumont-Emerson 6EM5 USA (274 63 26)

2 Dumont-Emerson -- Japan (12AA2 6AA3)

3 Dumont-Emerson 50EH5 Japan (6AA3 12AA2)

4 Dumont-Emerson 50EH5 Japan (12AA2 6AA3)

5 GE Electron Tube 6GH8 USA

6 Dumont-Emerson 6GH8 USA (274 63-35)

7 Dumont-Emerson 6GM6 Japan (A3)

8 ? 6GM6 ?

9 Dumont-Emerson 6EA8 Japan (6AA3)

10 Dumont-Emerson 6BA6 USA (274 63-30)

11 Dumont-Emerson 6BA6 Japan (6AA3 10AA2)

12 Dumont-Emerson 6BA6 USA (27 63-30)

13 Dumont-Emerson 6A00/ECC85 Holland
(Note: 2nd ⍰0⍰
may be a Q)

14 Dumont-Emerson 6BE6 --

15 Dumont-Emerson 6DT5A 5AA3 (Note: no country

found on tube)

16 GE Electron Tube 6CU5 USA (FU 188-5)

17 RCA 12AT7 USA

18 RCA (CY) 6DE4 USA

19 RCA Electron Tube 6GK5 USA (AQ)

20 ? CG8A USA (37 43-26)

21 ? 6AW8A USA

Again, please let me know if any of the above tubes can be used in audio and if any are of value. When responding, please response to as:

greglear@bellsouth.net

Thank you for your anticipated help and response.

Sincerely,

Greg Leary (electronically signed)

> Thanks...
>
If it's a GPR-90 not a variation it was made in 1955 or 56. The variation
(with crystal calibrator) was made from '56 to '62. Value?
They sell fast at over $300.00 depending on condition. I've seen them
sell for quite a bit more in really fine shape. Excellent receiver.
The GPR-92 is very rare and sells for a fortune.

From: exray@caribe.net
Message-ID: <6qkecd$h1a$1@nnrp1.dejanews.com>
Source record: 101113

My 2 cents on old Swans.
I had a 350C and a 500CX in the mid 70s and loved em both. Swan may have gotten a bad rap as a "sweep tube" rig, but if you know how to load a rig thats not really a problem - but keep a set of finals on hand and know how to neutralize them. Its not "plug-and-play". The 270-Cygnet was a pretty cheap radio in its day-kinda the bottom of the line-but there were zillions of them on the air. I'd stay with the 350C or 500CX.
I guess one of the better qualities as others have mentioned was the fine audio, both rcv and xmt. As I recall they used a 2.7khz wide, but fairly sharp filter that sounded nice. There'll probably be some guys with razor-blade audio on the band these days that will hassle you for being "wide"...but that's always been the case.
Go for it

Nope.

This is off-topic for a newsgroup dedicated to vacuum-tube Ham equipment, but I will mention one thing: The GC-1000 Most Accurate Clock used to be referred to by some people at Heath as the "world's most expensive clock radio--and it receives only one channel!"

ObBoatanchor: You REALLY do need to twist the wires together and place them as close to the chassis as possible.

The new clocks that receive WWVB VLF signals work a whole lot better,
and are very cheap; Radio Shack sells them for around $40. I have a
similar one from Oregon Scientific, and it's always in sync. Best of
luck.

.....My two cents: the Radio Shack model is on sale this month for $34.

As information, I owned an early Fairchild solid state
scope that took vertical and horizontal plugins. It also
used nuvistors in the vertical amp frontends, and in the
sweep generator.

For Sale:

KWM2A WE with NIB 6146A spares
312B5 WE
516F2 WE (spare 5R4GY and 5U4)
30L1 WE with spare 811s (Jan Surplus)
Noise Blanker complete, no docs, untested
Mobile Mount, never used (no docs)
Mobile PS, Like New
Novice Crystal Control Adaptor (no crystals or docs)
First Generation copies of manuals except as noted
Low Level cables

$2600

All equipment is in operational condition, looks great, no dents, grunges, major scratches, no mods, and front panels are nice. This equipent is not pristine, but it will brighten up any desktop. Buyer pays UPS from zip 95827 and UPS versapack fees (approximately 75 dollars for double boxed).

PS. I know there is a need for 312B5s out there and I wish I could help, but I want to to sell this as a package.

Hallicrafters SR2000:
2000 Watts PEP SSB and CW
80-10 meters operation
Includes 110/220 VAC power supply
Condition:
SR2000 - Front panel immaculate. All original knobs. Some
minor scuff/rub marks on case. Owner is a non-smoker,
and so were previous owners, apparently.
Power Supply - Front panel immaculate. Some minor scuff/rub
marks on case. A 5" muffin fan has been mounted (with
double-stick foam pads) on the side of the case to cool
the HV dropping resistors.

The rig loaded up and ran perfectly the last time I heated it up
about a year ago.

PRICE: $750

Hallicrafters HA20 External VFO:
Provides split xmt/rcv capability
Provides dual rcv capability
Built in SWR meter
110 VAC
Condition:
Front panel immaculate. Case immaculate. One knob has been
replaced with a close, but not perfect duplicate.
Works perfectly.

PRICE: $150

The rig is located in Spokane Washington, and is priced FOB Spokane.

I am selling because I am moving to a boat, and will have no way to feed
this puppy with the AC it needs.

Please reply via email.

For Sale:

Good vintage AM Station

1. each Valient, excellent electrical condition, clean chassis, good tubes, SS rectifiers, but will toss in 3B28s if that helps. Only mod is a below chassis TR relay, KRP style. Can be removed and restored to original if desired. No audio mods or any other "Tweeks" have been mad and the wiring is excellent. I've had this thing for years and I am never going to get around to doing any of the Audio Mods in this life time. Front panel is nearly blem free, but there are a few light scuffs around the outside edge into the maroon under paind. Otherwise it shines. All knobs original and it works great on all bands. $300 plus UPS fees if it will ship.

2. National NC183D receiver, looks good, works great. No mods or ugly maintenance performed. All knobs original and in great shape. Some pin point rust spots coming through, but not that noticible. Interior is nice. Actually does fairly well on SSB on lower bands. Not a bad receiver given the General Coverage design.. Big Sound on AM fone. $250 plus UPS fees.

Will sell the pair for $525 and will toss in a Shure mike with connector, a heath vintage VSWR bridge and a J-37 Key. I will ship if buyer pays for double boxed versapack which I estimate to be about 40 dollars for both units. Compute weight from my zip 95827. I have not weighed either unit, but figure 110 lbs on the Valient and 90 lbs on the NC183D (if you have docs that list the weight, adjust the UPS rates accordingly.

I'm looking primarily for the cable alone and not the whole kit
that Yaesu sells for all of their radios. The stand alone cables were
sold before the whole kits. But I'll seriously concider all offers and
all cable kits.

New Svetlana 6550C and EL-34 for sale. These are new in the box and I will not be needing these as my Heath Appache is going too. But these tubes are going now so if you have a need for them let me know. Oh by the way I should put some kind of price on them. How about $75 for all four tubes plus shipping from 48001 Algonac,MI TNX DE AA8WL

443. ARRL Proposal

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-10 00:00:00 UTC
From: Manny@aol.com
Message-ID: <35ce5bc3.39990636@news.clark.net>
Source record: 101045

I just found this at the DXTRA web site:

http://members.tripod.com/~CYBERHAM/

ARRL PROPOSES MAJOR CHANGES!

THE AIR WAVES AND NEWSGROUPS ARE FULL OF STATIC DUE TO RECENT CHANGES PROPOSED BY THE ARRL. IN BRIEF,THE PROPOSAL AMOUNTS TO A 5 WPM GENERAL TICKET WITH OVERNIGHT FREE UPGRADES TO GENERAL FOR NOVICE AND TECH+! THE UPGRADE WILL REQUIRE NO ADDITIONAL CW OR THEORY FOR EXISTING NOVICE AND TECHS+. THE NOVICE-TECH+ AND GENERAL'S WOULD BECOME CLASS C..ALL ONE GROUP.FOR MORE INFORMATION ON THIS KNEE JERK ACTION BY THE ARRL AND IT'S ATTEMPT TO PRE-EMPT THE FCC PLAN..PLEASE VISIT THEIR WEB SITE LISTED IN OUR LINK SECTION UNDER ARRL CONTEST..THEN GO TO THEIR HOME PAGE AND GET A GOOD LAUGH!

FISTS CW CLUB IN OPPOSITION TO ARRL PLAN!

FISTS SAYS..THE CODE ISSUE ASIDE (5WPM=GENERAL,12 WPM=EXTRA),THEY ARE PROPOSING TO GIVE PORTIONS OF OUR CW SUBANDS TO PHONE OPERATION. PLEASE TAKE THE TIME TO LET THE ARRL AND FCC KNOW HOW YOU FEEL ABOUT THIS.THE ARRL IS SUPPOSED TO REPRESENT IT'S MEMBERS:THIS PROPOSAL GOES "AGAINST ALL" THE SURVEYS AND WHAT THEY "KNOW" TO BE THE WISHES OF THE MAJORITY OF IT'S MEMBERS.

SOURCE..FISTS CW CLUB ISSUE 7 1998

Does anyone know if this proposal is true?

Surely not!!

444. ARRL Proposal

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-10 00:00:00 UTC
From: Manny@aol.com
Message-ID: <35ce5c90.40195615@news.clark.net>
Source record: 101046

To be fair to ARRL, I did not find the specifics that DXTRA mentioned in their web site article.

What I did find was this comment at the end of a VERY lengthy article that managed to skirt around most of the specifics! -

"Some members, we know, do not like the Board's decision on restructuring. Some oppose any change; others oppose change that doesn't go as far as they might like. Many say they like the basic idea, including some who have suggested minor changes. Whatever your own opinion may be, bear in mind that we're a long way from a final resolution of the matter. The next step should be the release of an FCC Notice of Proposed Rule Making on the subject, with a window for public comment. As soon as there is further news, we will share it with you. -- David Sumner, K1ZZ"

We may be a long way from the final resolution, but it sounds to me like we are on the fast track to giving Novices a free General ticket. Am I right or did I mis-read something here?

Any TELETYPERS lurking around?

I just came across a stack of originals of one of the very first publications of the "Amateur Radioteletype Society" (which must have been sent out in the late 40s or early 50s). It even has a full-face picture of "the originator of amateur radioteletype" -- John Williams W2BFD -- working inside a rack of rtty equipment...

If you want TWO of this nostalgic booklet, just send a stamped (3 oz. postage) 6x9-inch (or larger) self-addressed envelope and a $1 bill to me at PO Box 73, Paramus, NJ 07653-0073. (for a 72K pix file of the front cover by email, send me an email at jsee@idt.net).

= = =

Also have two boxes of teledeltos fax paper used in WESTERN UNION TELEFAX machines. Each box has two rolls of the special paper. $10 + postage for 5 lbs. to same address as above. (If you're going to order it, send me an email so I can tell others not to send any money after the two boxes are gone...)

I sincerely apologize for posting this issue here. But for those that don't visit the many other web sites, you need to be aware of the new proposal by the ARRL to the FCC. The new proposal amounts to "dumming down" amateur radio to the level of CB radio. There are many opinions on this issue and I urge all Hams to voice yours NOW!. My own opinion of the ARRL has not changed since they sold out to the advertisers and equipment manufacturers in the 1970's. I have no proof, but I suspect this is more of the same. Regardless of the motive, this new proposal cast a permanent dark shadow on amateur radio and I urge you to get involved. 73 & best wishes Bill AF4LE

A ceramic or crystal mike is a good choice. A dynamic mike with
a transformer is OK too. I have an HT-44 and it works fine with
the mentioned mikes.

I have the following Heath items for sale:

SB-610 monitor scope. Working order, but not all parts are original.
Horizontal gain control has been replaced, and has no knob.
Sweep freq knob and tone gen knob are missing the chrome colored ring.
Cabinet is fine -- a bit dirty, but no dings. No feet.
CRT and HV caps seem good, as it is working fine. No manual. $ 70

IB-1101 freq counter. Works great, looks great. As far as I can tell,
everything is original. Manual is included. $ 65

GC-1107 digital clock. Works great, looks great. Everything appears
original. $ 25

I have the following Heath manuals available. All are in good condition.

IO-103 Five inch scope $ 12

GR-2000 TV Set $ 12
GR-2050 TV Set - Five book set $ 30
GRA-2000-1 TV Clock $ 3
GRA-6001 TV Clock $ 6

Prices do not include shipping from Florida.

>I have no first hand knowledge. I just remember once looking in something
>like a 453 and being surprised that there were nuvistors.

You're right, the earlier 453 scopes used nuvistors in the front end, and later ones used FETs. The change might have come when they took the 453 to the A model, but I think it occurred during the 453 original's production run.

I've never seen a nuvistor fail in a 453. Really fine specs, too.

The only place I've ever had to sub a nuvistor in a scope was in the old Tektronix Type W plug-in units......there were pairs of nuvistors mounted up in a little blue shield assembly [so that they were a matched set and were replaced together]. And I don't think I've ever had a set quit on me, but I do remember having a pair with excessive DC drift that I replaced to avoid

chasing the trace up and down with the offset control..... :-)

I'm a nuvistor fan too....

Source record: 101066

This is on page 331 of Fred Osternan's book. A complete double RA-17 RF/ IF strip and audio, but only one tuning control. Works. Will throw in an extra PS (non working). Complete with original manual (the radio is a 7, the manual a 5 or 4 !)

Must be picked up on Long Island, NY. I cannot pack this. Mounted in 6foot relay rack with casters. Relay rack is $50 more if bought with radio.

This is a very very rare radio; in fact I know of only one other working set; it is in South Africa.
The dual RF/IF strips permitted its use of DFing. The phases of the radios were closely matched for interferometry direction finding, but this requires extra equipment.
Price $575

Bill, you're not at all far from the truth. I'm not sure which month or year of ERthe letter was in, but within the last 2 years I think, there was a closed door meeting at Dayton between the ARRL and the manufacturers. The topic was apparently just this - how to get more licenses out there so they could sell more of those $3000-$5000 plug-n-play radios. If you think about it for a moment it makes perfect sense. Make it easier to get a license and you'll sell more radios(CB).

What's worse is in their letter they brag about how 'some wanted to make it even easier, but we fought to keep it tough' or something to that effect. Like publishing books with all the answers next to the questions, creating a no-code license, and creating 'waivers' wasn't making it easy enough!

Now, if you *really* want to be scared, stop and think that an organization whose membership is something like 20% of the licensed amateur population, perhaps 50-60% of whom are active, can make the decision for all of us.

It's pathetic - there has to be a better way. I hope everyone will contact their gov't representatives and fight this 'proposal'.

For sale:

KWM2A RE
516F2 RE
30L1 RE
312B5 RE

All items are in good operational condition and in excellent physical condition. With good first generation copies of all manuals, interconnecting cables, and spare 811s for the 30L1.

$2250 for the pile plus UPS and versapack fees. I want to sell this pile as a package and am not keen on breaking it up at this time.. I know folks need the 312B5s but I'd like to keep it with the packages.

Tnx for the read.

Source record: 101072

I have two left Rockwell/Collins P/N526 9421 000
F500Y70 AM mechanical filters left. 500KHZ IF, and designed for AM reception
(7.0khz bandwidth nominal) No more available after this! This are a
miniature style filter that is similar in shape to those in a R-390. Some
hams have stated these will fit in the 51S1, but I cannot verify this as I
am not a Collins owner. These air military surplus filters NIB. First
e-mail reply takes the last two. $20 each, shipped.

Paul Larson-WA7PXD

BOATANCHORS FOR SALE:

All radios are "Collector Quality" condition electrically, mechanically and cosmetically.

Hammarlund HQ-180
Looks and plays beautifully. All original with original manual and original factory service manual for the entire HQ-180 series receivers. $325.

Hallicrafters SX-28
The premier broadcast receiver of the mid-40's. This radio has been beautifully restored to original condition and is beautiful to behold. It is mounted in a black aluminum cabinet with a trapdoor top. It works and plays beautifully and virtually looks like new. With manual, $400.

Collins R-390A
This radio was built for Manson Labs, Inc. of Stamford, Connecticut. It is in beautiful condition and plays great. It has all original meters, knobs, both top and bottom covers, original name plate, and includes a copy of the original manual for $400.

Will sell all three radios for package price of $1075. These radios are for local delivery in the Dallas-Ft. Worth area ONLY. Will not ship. If interested, please e-mail privately.

473. FS: Radios, antennas, test equipment

We have a mixture of hollow- and solidstate radios and test equipment available to go to new homes. All prices are in US Dollars and do not include shipping. Please call (403.247.4396) or email for details.

ANTENNAS
KIWA Pocket Loop, $75

Palomar base with BCB Antenna, $100

RADIOS

AOR 7030 $800

Kenwood R5000 $695

Marconi CSR5A (general coverage receiver works extremely well, very sensitive, s-meter added to front panel) $150

Marconi Electra (striking receiver appearance-wise, works, very difficult to find, overall cosmetics very good. This receiver has been modified to accomodate a professionally constructed internal power supply which has been fitted inside the original manufacturer's cabinet, works.) $400

Pye Model 39HC (British-made wood cabinet receiver, works, dial excellent, overall very good condition) $250

Hallicrafters SX-23 (Typically very difficult to find especially in fine cosmetic and working condition. This Hallicrafters model was manufactured for a short period of time; I believe one year. Raymond Lowey is believed to have been involved in the design of this uniquely attractive receiver. The gray painted chassis is original and is in excellent condition as is the overall receiver. Easily a 9 on a scale of 1 to 10) $575

Hallicrafters SX 28A (Have seen at least a dozen nice examples of this model receiver. This receiver has the nicest knobs of any SX-28 we've ever seen. I'd call them a 9 on a scale of 1 to 10. The front panel has had a toggle switch added (alongside the BASS toggle)-- it's been extremely well done, tho I don't know what it is supposed to do. On a scale of 1 to 10, the legends, front panel, etc. are an easy 9. BTW, it's also marked SX-28A on the front panel. Internally the receiver has been modified -- one mod is a Collins filter addition, audio mods are apparent as well. Works but needs electrical restoration.) $200

Hallicrafters SkyBuddy S19R (One of the earlier Hallicrafters, still has original speaker grille flocking, very good cosmetic condition) $125

Hammarlund HQ 145A (Double conversion, similar appearance to HQ 180, no clock, chassis immaculate, front panel excellent, perforated-design cabinet ala HQ-180 has some minor scratches) $175

RCA AR88 LF (Black wrinkle boatanchor that carries an equally weighty reputation as one of the best superhets ever. National S-meter has been added, receiver works but has not had cosmetic or electrical restoration, also has a cabinet.) $200

RCA BP61X (Vacuum tube lunchbox-style portable, works, cosmetics 8.5 on scale of 1 to 10) $75

RCA A-3 (Wood cabinet receiver, recently tuned, good condition, works very well) $75

Breting 14 (Newly powder-coated cabinet, mirror excellent, escutcheon very nice, this 1930's vintage radio hasn't been restored electrically yet) $350

Patterson PR-16 (Cosmetics very good, recapped, suprisingly sensitive receiver with a unique look) $425

Stromberg Carlson Model 874 (Wood cabinet, battery operated set in good condition, untested) $50

Phillips (Small maroon bakelite tabletop shortwave receiver in very nice condition, excellent reception, great little receiver on SW bands) $65

TEST EQUIPMENT
Hickok Model 156 Traceometer w/probes. Very good condition, works. Manual copy. $150

Hickok 288-X in good condition, one escutcheon is broken off at top edge but luckily it doesn't make it look terrible from a cosmetic standpoint. Very nice condition overall. Manual copy. $65

Heathkit IM-58 Harmonic Distortion Meter in good condition, works, $45

Hewlett-Packard Model 5328A Universal Counter w/HP-IB IO Opt. 011 and Opt. H99 (TCXO) in good condition, works $550

RCA Chanalyst w/probes and manual copy. Works and is in very nice condition. $150

Starkit Sweep Marker Generator is in very nice condition, $15

Simpson Model 480 Genescope with original manual. $75

Singer Spectrum Analyzer, MF-5 w/VR4 Module. Very good condition, works and has manual from Tucker. $135

Heathkit IO-102 Scope (works, manual copy available and is in nice cosmetic condition) $45

478. WTB: VLF phase tracking receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-10 00:00:00 UTC
From: bg998@FreeNet.Carleton.CA
Message-ID: <6qnknf$1cm@freenet-news.carleton.ca>
Source record: 101080

Hope this isn't too far off-topic.

Does anyone have a good, used VLF tracking receiver (VLF phase comparator)
for sale at a reasonable price?? It would be the kind used to compare the
frequency of a local freq standard with the atomic standard at Station WWVB
on VLF 60 kHz.

My faithful Montronics (subsidiary of Fluke) Model 205 VLF receiver has
given up, and not having either a service manual or a schematic I am at a
loss to repair it. Probably built in '50's or '60's as one of its four RF
channels is for Station WWVL on 20 kHz (kc/s at the time of course).
Now I need something else to calibrate my Sulzer Labs 5A freq std.

Thanks and 73
... Martin VE3OAT

Well, it was inevitable, wasn't it? Someone on another group did a
regression model and according to the results, ham radio would
self-destruct in 20 or less years. What's interesting, though, is that
ARRL has only 20% of the licensed amateurs. If that's the case, then
20% of the hams in this country are, for better or worse, influencing
the outcome for the other 80%. Seems to me if one wants change (or no
change in this case), one might want to consider being in a position to
exert some influence. How did Slick pull it off.... Answer: what was
it.....20% of the electorate?

485. FS: Parting nice HQ-170

Newsgroup: rec.radio.amateur.boatanchors

From: Doran Platt <jeepp@erols.com>
Message-ID: <35D0B40E.645E6A23@erols.com>
Source record: 100939

Had to make one perfect out of 2 units. So, I have virtually all parts from a nice HQ-170 receiver via depot-quality, non-destructive cannabalization. There's no clock and a few other misc. parts. The front panel casting is very nice (only one small scratch), same for the cabinet (decal on back fine!. All knobs, controls, dials, pots, caps, pwr xformer, coils, ad infinitum. Again, this was no junker..I needed the parts more for another one! Let me know what you need and I'll give you a quote.

Message-ID: <35d2b77e.41938524@news.std.com>
Source record: 100942

I have a very nice TR-4C for sale.
I would say its at least an 8 on a 10 scale. The face is perfect.
Knobs, glass, dial, lettering all in great shape. Full output on all
bands. (200 watts on 80 meters). I say an 8 only because I think the
cab was repainted. But it looks great.

It comes with the AC-4 PS. That's the one without the speaker.
Also a Turner plus 3 mike. (came with it when I got it.)
Covers all of 10 meters. I think the TRs came that way but not sure.
Just FYI. All works fine and in good shape.
Also have manual.

I'm only selling because I want another drake and can't afford both.
I require prepay and postage. If the rig is not sold by the 28th its
going to Boxbourgh flee. I will pack it in two boxes with the stuff
they sell at UPS. It should get there safe. (I've done it before.)

If you want, make me an offer.

Hello Bill:

I agree 100% with your observations. What I like to do sometimes is to lay out the receiver performance specs done based on actual measurements by Sherwood Labs. Usually, that opens a few eyes, and shows that the old high quality radios still hold their own against the modern rigs...esepecially when it comes to noise floor readings. Lots of times, the sound of noise rushing from the speaker fools the newbie into thinking there is a great deal more sensitivity than the older radios...really they are just hearing a lot of internal static, and think it is the atmopheric noise level!

Regarding the hams with the HT's that do cross band repeat, and ten thousand other functions which require a degree in computer science, or at the least, a college minor in logic, I have to hand it to them for being able to remember the functions and modes! If they put some of that brain power towad learning about radio, they'd have been on the air for months already!

Every month, a group of us get together for supper, and they are about equally split between newbies and oldsters. The topic of the performance

of older equipment comes up regularly, and even the new folks agree (after hearing a good radio)...that the apex of quiet rx development came with the commercial gear of the late sixties vacuum tube technology.

All the best! Hope to hear you on the bands sometime, so we can comiserate over the state of ham radio today compared to when we were kids! That way, we sound just like the old farts we listened to when we were 15...I remember one guy...W2OY in western New York that just HATED SSB operations, claiming that it had no future...I used to laugh myself silly over his views...now, I'm him!!!

Source record: 100945

I sure would like to see those performance figures. They would make most interesting conversational fodder.

They way I see it, is the new rigs are going down in RF quality, but are coming equipped with ever-more digital wizardry - sometimes used to "cover up" a low grade receiver by using DSP (and more tricks).

You don't have to look very far to see examples of my theory.

So far as a BA, I'm looking for a Drake TR4 series that is someplace nearby. That way, there is no shipping involved and I get to look at it before the sale.

Many of the old Philcos were assigned model numbers like "37-660", in
which the first two digits indicates the year it came out. That might
give you a bit of a clue.

Source record: 100950

Rare and collectible 75A4 custom built by Collins Radio for President of Eldico. Cabinet is smooth and painted gray to match the Eldico SSB Exciter and Linear Amplifier that appeared along with this Receiver in Ham advertisements back in the late fifties. Has three mechanical filters and vernier knob. Absolutely mint condition and completely aligned. No serial number - but evidently a late model. Serious offers over $800. KT2L at 914-937-6376.

While my new SX-101 is a nice receiver, it really needs a good product detector. I understand that the SX-101A does have a product detector and I would like to rebuild the existing detector to match.

If anyone could send me a partial schematic of the area of the 6BY7 product detector, I would be very grateful.

A flatbed scan of the area (gif, jpeg, or tif), or a photo copy would be fine. I will be happy to reimburse your costs.

Thanks, Bruce AB7YD

Hello Folks:

I run Collins gear myself (almost 40 years old now), but a good friend Gary Smith VE4YH has the Swan website. I have operated a lot of his radios, and have been impressed with the tuning....do they drift? Yeh, a little, but so what? That's one of the reasons they have a tuning knob on the front!

Here is the link for the Virtual Swan Museum:
http://www.pcs.mb.ca/~standard/

I get a laugh out of hearing guys meeting on a freq...say 14.251.5 MHz for example...and one fellow telling the other that he is 40 or 50 hertz high! As if they were running channelized radios that can't be tuned with the dial until the other station has a natural sounding voice!

Here's my take on it...
The old equipment can represent a great value for the dollar, and can teach you an awful lot about radios and communications for a fraction of the cost of even the cheapest new solid state rig. I talk with lots of new hams on 2 metres that lament that they'd like to go HF someday, but they can't afford it....meanwhile they are using a $400 HT!

A lot of these radios like the Swan's Heathkits, Nationals, Hallicrafters, etc. will get a newbie on the air very cheaply, and provide many, many

hours of enjoyment. No, you shouldn't buy junk that has been butchered by every previous owner who used nothing less than a blowtorch to do the mods that he dreamed up himself!

Frequently, you'll hear "yeh, but it's got tubes, and you can't buy them anymore" well, first, tubes don't burn out every three weeks needing replacement.....many of my radios still have the original tubes after 40 years, and are still making original performance specs!

Next, tubes are available through many sources...and pretty cheaply too. All you have to do is put forth a tiny bit of effort and look. They are still out there by the hundreds of thousands. I would venture to say that I will still have no problem finding an RCA 6146B 30 years from now far more easily than a replacement transistor...or heaven forbid, a CPU for a TS-940!

A fairly long time ago, I was the Chief Engineer for a small AM and FM radio station. I had always been exceedingly sceptical about this "Tubes sound better than transistors" crap. I'd say look...here are the waveforms on the scope...see any difference? No! Now get lost with that garbage! Now, I can say that I find listening to my tube radios for the entire day to be far less tiring than listening to my Kenwood, or a buddy's Icom for even a few hours. To me, it just sounds smoother, more pleasant, and less fatiguing to operate. Also, the wider filters make a big difference. These very same wide filters often draw comment..."you're pretty wide, but you sure sound good!" In all conditions of "normal" operation...general QSO'ing, the filters have been quite good enough for my use. If the band is exceptionally crowded, say Field Day for example, yes, the older radios suffer. Realistically, the new radios that I operate during my shifts for the club station also suffer under those conditions. So, as they say in Britain, "It's different horses for different courses!"

Although I don't ride a motorcycle, I like to describe it this way:
A twenty year old buying a racing bike has a completely different set of criteria than a 55 year old Shriner looking for a Harley to ride in the parade! I'm in the Harley stage, but for some folks, nothing but the race bike is good enough, and they feel that anyone with a Harley is riding nothing but an old piece of junk!

I leave you to your deliberations!

Cheers to all,
Lee Smith

^^Tube police radio worth Keeping?^^

Well the Tube Police have become somewhat inactive lately, largely they've confined their raids on owners of tube-based equipment who modify them instead of keeping them the way they left the factory, or worse, throw them away.

BTW in England they're called the Valve Police.

I think that the number of law enforcement agencies seems to be growing exponentially.

507. WWII German tubes

I have found a collection of WWII German receiver and transmitter tubes. Can any let me know where I can find details of their connections and characteristics?

They vary from small "acorn" types to about 75w tx tubes. Some have pins and others side pins and many have screw-in knobs to insert them into their holders.

Thanks

Attention SGC Collectors - For Sale: SG705 portable/mobile type-accepted low-power HF rig. Covers 2-10MHz, USB on 11 channels at better than 10W PEP out. Similar in appearance to SG715 models except no battery box or waterproof case. In like new condition except paint has flaked off volume knob escutcheon. Has high-stability oven option which can be unplugged for very low 12VDC current consumption (must re-net channel crystals). Also has front panel up-down control and limit LED for motortuned ("screwdriver") antenna. Internal space for LSB and squelch options, but unfortunately no manual or schematic. Includes SGC microphone. Originally shipped for maritime service, here are the crystals installed (some set up as half-duplex):

1 - 2182.0 (S)
2 - 2096.5 (S)
3 - 4125.0 (S)
4 - 4385.3 (HD)
5 - 4090.9 (HD)
6 - 6218.6 (S)
7 - 8241.5 (HD)
8 - 8765.4 (HD)
9 - 8291.1 (S)
10- 8740.6 (HD)
11- 8216.7 (HD)

Asking $150 plus shipping from St. Louis, MO.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday August 16th 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)

512. FS: WW II Aircraft Interphone NIB

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-11 00:00:00 UTC
From: Craig Smith <ip500@roanoke.infi.net>
Message-ID: <35D05DDE.1084@roanoke.infi.net>
Source record: 101023

Picked up six of these BC-709-C aircraft interphone amplifiers.
They are NIB w/the manual. Neat little self-contained, battery op units.
The whole system was the RC-73[mics and phones were the other parts] and
was used for "for use in primary training aircraft".
The amp is natural aluminium finish, has jacks for 2 ea. phones
and mikes and is mounted on a shock mount. Marked 1942, mfg Andrea Radio
$35/ea + ship for 6 pounds from VA 24012.
Craig

513. Re: Looking for Yaesu FT/DX 560 or 570 transceiver in good condition.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-11 00:00:00 UTC

I have a YAESU FTDX 560 being returned from YAESU USA for repairs.
It has been completly restored to original condition. It has a pair
of 6KD6 for finals, not 6146. I also have a FL2000B amplifier that
was also at YAESU USA for restoration. I am asking $400 each or
$700 for both plus shipping.

Ya know, no matter what the ARRL does, people won't like it. I
remember when the so called incentive licensing was reinstated back
in the 60's. Everyone was cursing the ARRL for messing up their
license. Generals and Conditionals were complaining about losing
privileges. Because the ARRL is so pervasive in Ham radio, I don't
think it could do anything without stepping on a lot of peoples toes.

>Actually, they did ask for comments - at least twice in the past year . . .

Yes, they did ask for comments, and even conducted a poll.

What they have not done is supply a reasoned explanation for what motivates their recommendation. There is a clear divergence between the military use of the electromagnetic spectrum and amateur use. The military no longer sees the need to train operators to overcome the limitations of radio communications. Use of the amateur spectrum as regulated by the FCC requires operator training. The ARRL fails to recognize this, and is acting blindly without any reflection of what an amateur radio operator is, should be, or what the value of the hobby might be.

Morse code has retained its value as a training tool, and the proposals the ARRL has made do not address the elements which would be lost if the code were not part of the licensing structure.

The ARRL is a self-appointed representative of the hobby.
Self-preservation is their declared first priority according to the vision they announced in the January, 1998 QST.

Apparently the metal is unstable. I have seen several meters that have the problem you describe. Only solution I know is to find a hose clamp that you can fit around the outside of the meter and tighten to pull the case back together.

Date: 1998-08-12 00:00:00 UTC
From: adicker113@aol.com
Message-ID: <1998081218415500.OAA03196@ladder01.news.aol.com>
Source record: 100902

Well I finally hear a couple of guys using AM on 20 meters last night.
Im using a Hammarlund HQ-150 and a simple long wire antenna.

I only hear AM on 20 meters but I checked them all. One big problem I have is the bands are full of buzzing staticy noise, I was having a hard time copying the guys on 20m.

Is it this noisey everywhere or is it because of my old reciever? Will earth grounding the set help? Or is it the time of year? I tried to listen to 160 meters but it is so staticy I couldnt hear signals.

Anybody have any input?
Im in Louisiana if that makes any difference.

I've just completed building my latest project... the BA guys will love this... a tube-type crystal-controlled CW transmitter for 80/40/20m using a 6V6 oscillator and an 807 PA with plug-in coils on 5-prong coil forms for the osc and PA tanks. It looks like it's right out of the 1950s! I painted the front panel with a black wrinkle-finish paint (I can't recall which brand I used and I tossed the empty spray can). Does anyone have any good suggestions on how to label the panel? For the time being, I am using Dymo labels, but they look tacky and don't adhere to the paint very well.

Dean, K5DH

542. Large Glo-bar resistors for Rhombic antennas

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-12 00:00:00 UTC

I have 5 left. New in the box 600 ohm glo-bar resistors. Perfect for
terminating rhombic antennas. These are about a foot long. $25 each
I also have 5 large vaccuum capacitors 50pF at 60Kv $20 each.

: >PROPOSING TO GIVE PORTIONS OF OUR CW SUBANDS TO PHONE OPERATION.

"They" being the FCC and not Fists I presume?

: To me this is the biggest issue.

Maybe to YOU, but the rest of the world is more concerned with the CW
speed issue. A future WRC isn't going to worry one wart about CW -sub bands-
They are going to deal with CW requirements themselves.

: They are going to give away part of the 40m CW allocation to SSB.

Oh - stop whinning! How do you think the Generals of past thought when
the FCC took large portions of the bands that they had and told them they
had to take additional tests to get them BACK?

: The rest of it is all overdriven, splattering SSB signals and constant
: blurpping AMTOR, RTTY and PACKET signals all over the place.

Perhaps you're trying to receive SSB with your CW filter setting? So join
the 1990s and burp with them!

: I can't BELIEVE that they want to give away 40m CW space!

"They" want to do a lot of things. Better start believing it.

I use DATAK dry transfer lables which I get from a local electronics distributor. They are essentially a paint which transfers to the metal when you rub on the paper backing. After putting on the labels I spray the whole panel with Krylon clear plastic coat.

Speaking of Swan rigs, did any of you guys ever run into the problem of the Swan (specifically the 500CX in my case) having distorted receive audio (or IF?) on strong signals, usually over the 10db level? The only way to improve this annoying problem is to back off on the RF gain...is this a design problem? Is there a fix?

Harry,

Are you looking for new, used, solid state, BA? $1,000 can
buy a lot of radio in the used market. Look at Ten-Tec rigs
for some great used values. You can get an Omni-C for $500 +/-
and Ten-Tec can still service it, should it need it. Should
be all the radio you need for a while.

Have you calculated antenna(s), mike and/or key, watt/SWR meter,
and/or tuner, etc., etc. into that thou dough? Or are you going
to sneak that in later under the xyl's nose? ;)

73 es congrats on the ticket,

I need the TM/FM/Org maint manual/depot maint manual, or just a schematic, preferably with alignment procedure. Will buy whatever you have that contains the needed data, or pay reasonable repro costs & shipping.

FYI: This is an 8-tube AM-only radio receiver covering 540-1500kc, 3.5-8.5mc, 8.5-19mc. It operates from 110/220V AC/DC and internal battery pack. Has no built-in antennas, but has terminals for long-wire antenna and ground. Must be pretty sensitive, because it appears to have one stage more IF gain than the contemporary top-of-the-line, no-expense-spared Zenith Trans-Oceanic Clipper receiver. The R-100"s OD crackle finish steel case is not nrarly as pretty as the Zenith"s.

The R-100/URR is the radio the troops used to listen to Armed Forces Radio, when they couldn't get the Zenith.

I'm pretty sure that's a whole lot more than most of you really wanted to know :-)

If you can help....or if you want to know what little more I've found out by examining the R-100 e-mail me at:

rogerlts@aol.com

Thanks, Roger Bigger, N2NHY

> 73
> Harry Reed, AB7YF

There are 3 logical choices:

(1) Ten-Tec Scout: With the hand held mike and 3 extra band modules, it costs around $700 (new). On the plus side it performs very well AND is VERY easy to operate. I have the Scout and love it. Right now, I have to 10 meter, 15 meter, 20 meter and 40 meter modules for the Scout. If I ever decide to move to a "bigger" rig, the Scout will be moved to my car. On the minus side, the Scout doesn't have AM, FM, and can't receive all of the Shortwave frequencies. For me, this is no big deal. Also, if you purchase all the Band modules, the cost is about the same as some other rigs.

(2) ALINCO DX-70T, HF 100W/6M 10W $749.95 (HRO Price); DX-70TH, DX-70T W/100W 6M & EBC-9 $849.95 (HRO Price): A friend of mine has this unit and he loves it. The big plus is that you get the 6 meter band with this rig. There's also the ALINCO DX-77T, 100W HF $799.95 (HRO) Price, but I don't know what that unit is like. I heard that Tech-America is selling the Alinco DX-70T at a close-out price, but I don't recall the exact price.

(3) USED EQUIPMENT: This is one area where you need to do your homework. Are repair parts available for this unit? What to other Hams think of the unit? Having a fellow Ham who knows equipment might be a big help to guide you. If you could go over to the seller's house and have them show you the rig in action, you should be able to see if it's in good working order. Most Hams are honest and fair about their equipment, BUT there are some rotten Apples out there who will take advantage of others.

Remember to count all the costs; Does the unit come with a mike? What will the power supply to drive the unit cost? What other "extras" are needed to get it up and running?

I was able to put together everything for under $1,000. While I'm limited to 4 bands and I don't have a big tower or yagi; I still have fun working DX on the bands I'm set-up for. Just think how much better it will get as the sun spot cycle makes DXing even better. :-)

73,
Bob

Can an ADMS interface cable be used to program Yaesu FTH-7008 radios, assuming
that the user has the appropriate programming software, and a homemade adaptor to
convert from the 3.5mm stereo plug to a 2.5mm mono plug?
If so, what's the schematic for the homemade adaptor cable to be used with
the ADMS cable?

Yes, but I don't know how well the transfer labels would work on a wrinkle finish. The last time I labeled a wrinkle finish, you could buy water-release decals that worked beautifully, particularly if you brushed over them with a solvent that dissolved the label's ink directly to the wrinkle paint. Looked like silkscreening, but I haven't seen the decals in years.

You might try looking in your Yellow Pages - a good decalcomania shop can generate most anything digitally.

I would recommend getting a used Kenwood TS 850. They are just about $1000
on the used market. There were many made so you could find one in
excellent condition. I have compared the TS 850 to many top end rigs and
the receiver (the most important part of a rig in my opinion) matches or
tops them all, including the Yaesu 1000MP (my other radio), the Ft 990,
The Icom 756 and the 775, among other earlier models. Get the most rig for
your money because you will grow into it. Personally, I would avoid the
new tiny hf rigs unless you were going to use it mobile. Best 73s and
welcome to HF! John, K7JY.

They work great on a wrinkle finish (actually better than a smooth finish).
I use them all the time. Have for the last 20 years.

If you can afford upto $1,000, you have a whole lots of choices in used market. What I recommend is, you get an used TS-830S or IC-735, and spend some money on your antenna, tuner, and other accessaries such as keyer. You can get a TS-830S in good condition for less than $450, and a IC-735 in good condition for less than $550. These two are excellent radios and still in demand in used market. I am using TS-830S and Drake C-lines (I have two sets), and I am really happy with them. I don't have IC-735, but this is a damn good radio and if you ask anyone who owns one, they will say the same thing. Don't spend too much on radios. I only buy used radios, and if you are a little careful in buying used gear, you can get a good deal and get a good radio.

You should remember that there are lots of things to buy beside the transceiver.

Good luck and hope you can make yourself and your wife happy.

Hi Dean
The only think that makes sense is to use a stencil cut out
and spray with a Badger or Paash type air brush.
Color of your choice and G/L sounds neat!
Mike
Never liked the look of Dymo's anyway

Message-ID: <26028-35D25B1E-124@newsd-153.iap.bryant.webtv.net>
Source record: 100928

I was on the ham bands when SSB was4 just beginning, and we all were told that you back off the RF gain, bring up the AF, swing the BFO each side of center till voice was normal, then don't touch anything, just cruise around the band! When Swans came along later, thats still the way we did it, so what you mention is not a Swan phenomena.

In an earlier post on this subject, I have already confessed my pro-Swan bias, so consider the source.

Keep those filaments glowing....

HHHHEEEELLLLLLLLOOOO!!!!, Anyone at home?

They ARE keeping the code requirement for ANY HF operation.

Besides, we STILL have several months in which to reply! Any takers or
are you all just going to sit there on your butts and bitch?!

a grand is a heck of a LOT of money for a transceiver. i suppose i would ask these questions of you:

which rigs have you seen others using?

what kinds of bells and whistles do you REALLY want to use?

is that built-in automatic tuner REALLY necessary?

how often are you gonna use the rig?

have you USED any of the newer/older rigs? sat down in front of them and twirled the knobs and dials?

do you want to maintain it (calibrate/tweek/retune) yourself?

can you deal with occasional transistor fails? do you want to?

what bands do you want to work?

what mode? CW, SSB, AM, RTTY, FM?

the older rigs suggested by VE3UVT are good choices (TS-830 and the Drake C-line, tho the Drake R4B is a good choice for receiving). If you really want to be budget minded, an HW-16 (75 watts CW on 80/40/15 meters) can be had for about $60. it's an older tube-rig but gets you on the air. you'll need a VFO for it, tho, as it was intended for xtal-only operation for novices (VFO plug on the back for the Generals, etc).

570. R-648 Query...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-12 00:00:00 UTC
From: Jeff Anderson <jeffa@ix.netcom.com>
Message-ID: <6qqm25$4is@dfw-ixnews8.ix.netcom.com>
Source record: 100954

I recently picked up one of these receivers at a swapmeet -
much smaller than an R-390A, but with a similar mechanical
dial readout (I'd imagine that the performance isn't up
to that of an R-390A, either).

Can anyone give me additional information about it? It
needs alot of TLC - what should I look out for, etc?

Many thanks,

- Jeff, WA6AHL

Bill:
I'm not aware of a capacitor kit, but have heard it is a big job. One person estimated about 40 hours. The really tough area is the capacitors in the RF deck. Per the manual, you must set the band switch between bands, or you can break some of the turret connectors. While in there, also check other components; for example resistors to verify they are still in spec. Also identify the wires going to the RF deck. They probably have faded over the years, and you want to reconnect them correctly.

Recently, I bought a SP-600 that had been re-capped. The previous owner (two back) had replaced capacitors in the RF deck, because I could see a Sprague Orange-drop inside. After a few hours of use, the receiver developed a not-to-high resistance short in the RF deck, so I must go inside. I'm guessing some of the original capacitors were not black beauties, and one of these shorted. I'll see.

I put a query on the Hammarlund-qth.net, and received a number of tips, which I'll pass along if you are interested. Answer to my e-mail address, because I don't check this newsgroup daily.

They didn't ask me!

I heard that the ones that they DID ask. had voted overwhelmingly
to KEEP the code requirement for a General class HF ticket!

Yes, like ARRL, only in HIS case it was 40% of those who voted,
but that is FAR less than 20% of the electorate. More like 10% I think.

>PROPOSING
>>TO GIVE PORTIONS OF OUR CW SUBANDS TO PHONE OPERATION.

To me this is the biggest issue.

They are going to give away part of the 40m CW allocation to SSB.

This is coming BEFORE they expand 40m to a more usable allocation and add to the width of it.

40m CW has become almost unusable here just like in Europe.
Our friends across the Atlantic have to deal with a lot of SW BC QRM and so they are limited to being below 7100 kc - a major headache for them.

We on the other hand, enjoy a CONSTANT barrage of XE and VE SSB stations inching lower and lower down the band to where you have to have an Extra ticket to work CW any more, because 7000-7025 is the only place you can go!
The rest of it is all overdriven, splattering SSB signals and constant blurpping AMTOR, RTTY and PACKET signals all over the place.

I can't BELIEVE that they want to give away 40m CW space!

595. Re: WTB: Eimac 3CV1500A7

I have been kind of interested in this tube but it does not appear to be in the current catalog, but if the tube is/was worth $600 or more Eimac will rebuild it and give the tube a new tube warranty. If you have a defective tube this may be your answer. I understand that "Stanley Steamers" made very quiet amplifiers.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.cb

I have a Lafayette HE-43C tube-type CB radio that I bought as-is through an eBay auction (yes, the price was right; I would have paid the same amount at a swap meet -- $20). The power cord and mic are missing, and it didn't come with a manual or schematic. I'm looking for copies of the original owner's manual, factory service manual, Sams Photofacts, whatever you might have. Will pay reasonable price for copying and postage. At the very least, could someone tell me the power and mic connector pinouts? I'm hoping to get the baby working and convert it to 10 meters for a-m operation on 29 MHz with the other BA users.

73,
Dean - K5DH

I remember quite clearly how I felt.....I was upset at losing my favorite frequencies. So many of us proceeded to do what was necessary to get them back. Others, well.... Some are still complaining and will be for as long as they are still breathing.

For your $1000, you'd better be factoring in an antenna, coax, tower, rotator and lightning protection. Of course, the tower and rotator are optional if you will be using a wire antenna.

Stay away from the TS-8XX and TS-5XX radios (as well as other pre-80's radios) unless you fully understand the art of dipping and tuning of tube rigs. Although they are fine radios, most new hams are unfamiliar with those techniques so they are best left to the old timers out there. Also, they require retweaking every time you change frequency a little bit.

If it were me, I'd settle for a used Kenwood TS-430S or Icom IC-735 (oh, you'd better figure on the price of a 12 volt supply for those radios). Those "all solid state" radios require NO tweaking when changing frequency (unless you've also purchased an antenna tuner). If you get a newer rig with a built in tuner, you can even avoid THAT inconvenience. Plus, you get memory channels for jumping back to an old favorite.

Hope this helps.

Radio Randy

Radio Randy wrote in message <35D3BDE9.4326@plix.com>...

>For your $1000, you'd better be factoring in an antenna, coax, tower,
>rotator and lightning protection... <snip>

A decent tower and rotor, plus the associated costs of raising it, will
easily exceed $1000...

>Stay away from the TS-8XX and TS-5XX radios (as well as other pre-80's
>radios) unless you fully understand the art of dipping and tuning of tube
>rigs... <snip>

Funny, my TS-850 and my friends' TS-870 both seem to be missing their
tubes... also, the TS850 was only recently discontinued, the TS-870 is still
a current model...

Got this off the fcc website: an e-mail form for commenting on the
big proposal:

(cut this line and all above)
<PROCEEDING> put-docket-number or rulemaking-number here
<DATE> filed-date-in-mm/dd/yy-format
<NAME> applicant-or-petitioner-name-last-first-mi
<ADDRESS1> address
<ADDRESS2> address
<CITY> city
<STATE> state
<ZIP> zipcode
<LAW-FIRM> law-firm
<ATTORNEY> lawyer-name
<FILE-NUMBER> file-number
<DOCUMENT-TYPE> 2-letter-document-type-code (use 'CO' for comment)
<CONFIDENTIAL> y-or-n
<PHONE-NUMBER> sender-phone-number
<DESCRIPTION> short-description-of-document
<NOTIFY> e-mail-address-response-destination
<TEXT> actual text of message...
Dear FCC...

(cut this and all below), email to ecfs@fcc.gov
Keep the <>'s and the stuff between < and >, replace the rest of the lines
with real info. AFAIK, the docket number is 98-143. Got this off the top
of the ../fcc98183.txt document. I don't know what to put for "file number",
I used "1". Think it refers to *my* file, not an FCC one.

Edit using an ASCII editor, then e-mail it to ecfs@fcc.gov

An automatic email receiver takes it in, and it needs all the <TAGS> so it
can make sense of it.

I have a Hallicrafters SR 2000 "Hurricane". It needs rest. It is in fair cdx cosmetically. Electrically receice works O.K. transmit does not work. Plate voltage problem.

I want to keep the radio and am looking for someone to restore it for me.

Please E mail me.

Thanks to all who replied to my earlier post. Several recommended these drop in replacements as finals:

6JE6, 6GJ5, 6JG5.

Would like to know if anyone is currently using any of these as replacements and if they work okay.

Ham License plates for sale

All are Ohio plates, with no year listed (Ohio has not put the actual
year on the plates for some time), except the last one.

Several different plates are available, as follows:

W8EK - Blue lettering - good shape $ 20

W8EK - Red lettering - not quite as good condition as the one above $ 18

N8AJU - Blue lettering - looks almost new $ 15

WA8ETX - Red lettering - slight rust at bottom - 1965 year on the plate $ 15

Prices do not include shipping from Florida.
Thanks.

73,

Ken, W8EK

I have a 1956 vintage TeleMatic "Tele-Check" unit for sale or trade. The Tele-Check unit is used to check, both quickly and accurately, whether or not the yoke or the picture tube of a TV set, regardless of its make or model, are defective. The unit consists of a 5AXP4 picture tube (CRT), a universal-type yoke, 6-foot CRT socket extension leads, and anode-yoke connecting leads, all of which are housed in a lightweitht leatherette portable carrying case with handle measuring 12 inches (depth) x 7.5 inches (width) x 9 inches (height). Includes original instructions, original TeleMatic catalog and a TeleMatic product line brochure. Minor surface rust on case hindges otherwise museum quality. Cost is 90.00 USD plus shipping. If you are interested, contact me by my EMail. Will consider trade for tube tester. Thank you.

I forgot to mention -- check the datecode on the labels before you buy - these dry transfer labels have a finite shelf life and the manufacturer won't guarantee transferability longer than five years at room temperature storage. You can pre-release old labels by lightly rubbing onto the original backing sheet, then transferring to your work. I have some dry transfer stuff that's almost 25 years old; some will transfer, some won't. You can recognize the datecode by a four digit field; e.g., 9411 = 11th workweek of 1994.

Happy homebrewing -

I'll second this opinion. I have had a TS-850 for four years, and it is
a very nice rig, particularly the receiver. At roughly $1000 on the used
market, it's one of the best deals out there.

If you need to leave some money for other items, and you don't mind a
ham-band-only rig, the TS-830 is a good choice. I have one, and use it
quite a bit. I wouldn't part with it (or with my TS-850).

73,
Jeff, KC1MK

Ok, everyone has contributed their inexpensive solutions. Now for the more expensive one: you could have small white on plastic labels engraved by one of the vendors that does name badges. Then screw or glue the labels onto the front panel. Yes, it is expensive, but on old homebrew gear, this "military" look is first rate.

Source record: 100873

I have a very nice TR-4C for sale.
I would say its at least an 8 on a 10 scale. The face is perfect.
Knobs, glass, dial, lettering all in great shape. Full output on all
bands. (200 watts on 80 meters). I say an 8 only because I think the
cab was repainted. But it looks great.

It comes with the AC-4 PS. That's the one without the speaker.
Also a Turner plus 3 mike. (came with it when I got it.)
Covers all of 10 meters. I think the TRs came that way but not sure.
Just FYI. All works fine and in good shape.
Also have manual.

I'm only selling because I want another drake and can't afford both.
I require prepay and postage. If the rig is not sold by the 28th its
going to Boxbourgh flee. I will pack it in two boxes with the stuff
they sell at UPS. It should get there safe. (I've done it before.)

If you want, make me an offer.

Source record: 100874

I have a problem with my 530.
40 and upper part of 10 meters has reduced output (70-80 watts) and
no ALC meter movement. All other bands are fine.

I have neutralized the finals and aligned the driver cans. On 40 and
28.5 I had to tune for max output because I couldn't get an ALC
reading. The ALC meter will jump on key-down and go back to zero.
I also repaired the coupler for the band switch.

Anybody got an idea what I should check next?

Thanks and 73s

Roger KB1ZJ

A bit off topic, but some advice for anyone shipping SX-28s or SX-42s.....

Versa-foam does work well, however, if the SX-28 was only secured
by the front rack screws you could have been in for a big surprise.
I received an SX-42 that shipped packaged in foam, the screws that
held the chassis to the cabinet bottom were missing. During shipment,
the box was obviously dropped several times, and resulting kinetic energy
tore the front panel from the rack rails, causing considerable damage.

Those rear mounted power transformers can cause a lot of damage if the
chassis is not fully secured. The front panel rack screws do not provide
sufficient support on their own.

Pete

Let me clarify a bit more. This query was posted in the Boatanchor
newsgroup.
The original shipping boxes are long gone. If I was shipping an S-38, I
could
easily handle the boxing and other materials. However, if I am shipping a
vintage
relic that weighs over 40 pounds, the buyer can count on paying for the
crating or
packaging...

Pete

>choosing to advertise and make use of a "global" market, the seller should
>cover the cost of packing the item.

When packing and shipping costs approach 50% of the cost of the item, it is
silly to expect the shipper to absorb the charges. Charges vary by
distance,
can you guarantee that the buyer will be local, or across country, before
you
price an item? You really expect the older gentleman who sold me an SX-28
for $250.00 should have absorbed the $121.00 crating and shipping costs?!
>
>>
>In any case, any delivery costs should be agreed upon prior to shipment to
>avoid any surprises later. If the seller chooses to use a Mail-BoxesR-Us
type
>place for packing and shipping because he is either too inept or lazy to do
the
>packing himself, the packing cost should be borne by the seller.
>

You obviously have no experience or knowledge in shipping larger
boatanchors,
such as a 75 pound SX-28 or SX-42 receivers. If you happen to have the
proper shipping
materials on hand to PROPERLY package these items, your are the rare
exception. If you don't, you are in for a rude awakening when you have
need for
them.

>To highlight this, let's say you were going to a hamfest to sell an item
and it
>took 5 minutes to load your vehicle, 30 minutes driving time, 25 minutes to
>park, unload, setup, etc, $25 for the table and/or admission and so on.

Now,
>how far would you get if you put a sign on a $200 item that read "$200 plus
$25
>plus one hour labor plus 32 cents a mile"?? Before you answer, remember
that
>the buyer has very similar costs just to be there to have the opportunity
to
>buy your item!! Of course, if you only wanted $150 net for your $200 item,
you
>might be able to "break even"!!!! : -)

If you are running a business, and conducting sales at hamfests, the price
of the
item reflects your operating expenses..... And that is part of the sale
price.

>
>Selling and buying is a two-way street and sometimes I get the feeling the
>"professional" seller has a tendency to lose sight of this . . . If you
are
>concerned about the cost of packing materials, you just might be operating
on
>too tight a profit margin . . . If so, you may have ceased being a hobbyist
and
>you just may be operating a business!!

Anytime your "hobby" is making a profit, you are legally subject to
Self-Employment taxes, Social Security taxes, and income tax.

Is your
>"business" income reported to the proper agencies? Are you paying the
proper
>taxes on this income?

Yes, and I hired a CPA to do my records.

Hello all,

I'm looking for a good used RCA VTVM to add to my vacuum tube radio workbench. Please email me at k3458@leo.infi.net if you have one for sale. Please post a photo if possible.

Thank You,
David

In any state, the FCC license allows you to get the Ham Call REGISTRATION. The plates are just a visible symbol that you have the registration.

Old plates without the registration in your name are worthless and unusable as license plates. However, some "collectors" will buy anything!!

680. R390A vs Hallicrafter SX100

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-14 00:00:00 UTC
From: Richard D'Avy <rdavy@delrio.com>
Message-ID: <35D39A68.A2D9F2DA@delrio.com>
Source record: 100798

I am looking to use an older receiver for general purpose listening. I have a Hallicrafter SX100 which is inoperative at present (minor) and I know where I can get a R390A in good condition. It's been years since I've used radios this vintage, and I can only have one, per the xyl (space reasons), so I ask what is the better radio all around. Any comments appreciated.
Richard

681. Viking II - Viking 250w tuner - Nc 173

Newsgroup: rec.radio.amateur.boatanchors

Source record: 100808

Richard,

I have both the R390A and SX-100 receivers.

For general purpose listening and space reasons go with the SX-100. It is an outstanding receiver for general purpose listening and with a good antenna will provide you with excellent reception. SX-100 is fairly easy to align.

The R390A is a much more stable, sensitive, and capable receiver -- though complex, large and heavy. The R390A is much harder to align since it requires a fair amount of mechanical and electrical alignments.

From a collector standpoint -- both are currently desirable.

Ben -- WB8HUR
San Diego

695. Shipping costs Am I wrong?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-14 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <35D40BE2.84BBEDAF@erols.com>
Source record: 100813

I am the only one finding that shipping costs (not the "postage, per se), boxes, bubble wrap, tape, etc. is really going up (and the fact that the Delivery Fairy no longer delivers your parcel on ider-down clouds). Am I being unreasonable to add these direst costs in? I used to be able to scrounge peanuts and old boxes, but the competition is now fierce! For example, to ship an HQ-180 using bubble wrap, peanuts, double boxes, etc, it cost about $17-$20 in materials to do it right. This is opposed to a Valiant I received (took delivery of the cadaver!) once in a Brawny paper towel carton from Wal-Mart and some old foam rubber strips from some rusted lawn furniture cushions (yeah "Wayne"... you remember... I do!!!) Any thoughts?

National Radio Company, Inc. HRO-60 tuning strips:

Nice reproductions of the plastic tuning strips used in HRO-60's.
I have masters for all coil sets available.
These are the flat HRO-60 type, but I believe they will also fit
the HRO-50 series.

I have all of the following:

A Combination general coverage & band-spread type.
A Band-spread only for A coil set.

B Combination general coverage & band-spread type.
B Band-spread only for B coil set.

C Combination general coverage & band-spread type.
C Band-spread only for C coil set.

D Combination general coverage & band-spread type.
D Band-spread only for D coil set.

E/F Both E & F scales on same strip.
G/H Both G & H scales on same strip.
J J scale only on strip.

AA 27.5 - 30.0 MC Scale on strip.
AB 25.0 - 35.0 MC Scale on strip.
AC 21.0 - 21.5 MC Scale on strip.
AD 50.0 - 54.0 MC Scale on strip.

$10 each (specify type) 2.00 S+H per order, including 1st class
mail and a padded mailer...

Money back guarantee!
If your not happy for any reason, just send them back.

I also sell some HRO and coil-catacomb National parts.
e-mail or write for current National parts list for sale.

One of my local Antique Radio collector friends....used to work for
a company that sells peanuts/bubble wrap etc....no cardboard boxes
but all the other stuff to pack with...due to recent retirement I
am now buying and selling more radios...and have lost one of my
suppliers of shipping goodies...namely "The Company"...as stuff
came into the place....I scrounged to boxes and packing before it
was put into the dumpster...anyway...this friend tells me that the
stuff is NOT THAT EXPENSIVE....if you go to a company that sells
it and buy a resonable quantity.....if you go to a packing store
or a truck rental place...yes....you will pay big bucks for it!!
just my $.02 worth...hope it helps!

Shipping costs should be borne by the buyer. However, it always
best to be upfront about shipping costs when the deal is initially made.
I recently had an SX-28 shipped from the West Coast to New England.
Since the seller was an elderly gentleman, he was unable to ship the
radio himself. It cost me $121.00 to have the radio crated (full wooden
case, with bubblewrap and foam plastic sheets) and shipped. I will admit
this a rather steep to price to pay, but the radio arrived via UPS with
minimal
damage. The top of the cabinet was bent down (easily fixed) and the main
tuning flywheel was angled due to a bent shaft. The radio must have been
dropped in excess of seven feet onto a hard surface to substain this damage
considering its excellent packaging.

Hello, guys..relief is as far away as your local 24 hour supermarket!!! The boxes are VERY sturdy, come in all sizes, and shapes.
AND THEY ARE FREE...go there about
4 A.M. whilst the stockboys do their thing,there will be boxes ALL OVER the place, and they'll be glad to see them go.. ! I use shredded newspaper, and O.P.P (Other people's peanuts!) Shhhh! Don't tell no one, my suppliers will cut me off! Use the water bottle and pet food boxes, those are tested to 200 lbs. per square inch. The American Tourister Gorilla couldn't smash these.. Never had a breakage yet, some 2,000 packages later.... Happy boxhunting.....
Joe at Tubecntral@aol.com
Thank you,
Joe Pratt, Tubecntral@aol.com

Doran is correct. Materials is going up. Takes a bit of reusing and scrounging to get good boxes these days. And yes, some folks don't seem to know how to pack -- or maybe just don't care. I have had the most luck (both send and receive) with "foam in place" packing. Just received a nice and heavy SX-28 via UPS that had been "foam in place" packed and it was perfect. You've probably all seen Larry Asp's name on this list -- he uses foam in place exclusively with no problems.

CommQuart" <commquart@erols.com wrote:

>Shipping costs should be borne by the buyer.

Since the context of this thread is "packing" costs, I am assuming you included those in "shipping costs." If so, I must ask - Why should the buyer pay the packing costs? When the seller advertises an item, he knows that completing the sale will require shipping in almost all cases. Knowing this, and still choosing to advertise and make use of a "global" market, the seller should cover the cost of packing the item. After all, he has just as much interest in the item arriving in good shape as does the purchaser. And the seller reaps the benefit of marketing his item to an immense audience. If the seller does not want to bear the packing costs, perhaps he should only advertise locally . . .

I think a lot of this so-called "problem" has to do with guys who throw away, lose, etc the original boxes in the first place. Most original boxes are sturdy and well designed. But, there are some folks who can't seem to hang onto manuals much less boxes!! While I realize this particular comment may be somewhat of a stretch for many BAs, it most definitely applies to newer equipment.

In any case, any delivery costs should be agreed upon prior to shipment to avoid any surprises later. If the seller chooses to use a Mail-BoxesR-Us type place for packing and shipping because he is either too inept or lazy to do the packing himself, the packing cost should be borne by the seller.

To highlight this, let's say you were going to a hamfest to sell an item and it took 5 minutes to load your vehicle, 30 minutes driving time, 25 minutes to park, unload, setup, etc, $25 for the table and/or admission and so on. Now, how far would you get if you put a sign on a $200 item that read "$200 plus $25 plus one hour labor plus 32 cents a mile"?? Before you answer, remember that the buyer has very similar costs just to be there to have the opportunity to buy your item!! Of course, if you only wanted $150 net for your $200 item, you might be able to "break even"!!!! : -)

Selling and buying is a two-way street and sometimes I get the feeling the "professional" seller has a tendency to lose sight of this . . . If you are concerned about the cost of packing materials, you just might be operating on too tight a profit margin . . . If so, you may have ceased being a hobbyist and you just may be operating a business!! Do you have a business license? Is your "business" income reported to the proper agencies? Are you paying the proper taxes on this income? Are you properly insured? These items can be considered "costs of doing business" - why not include them along with the packing costs?? ; -)

Randy,

With barely my ticket in hand I had a TR-3, a DX-40, a 2-NT. It
really is not that hard to learn to tune these rigs. You are making
it sound like a black art or something that takes months of experience.
I learned to tune mine with either or both help from the manual
and tips from BA enthusiasts in the NGs. It's just not that hard.

Of those rigs, however, the 2-NT is probably the most rugged and
easy to tune. Those can be had, by the original poster, for around
$100 +/- and add a Heathkit VFO for around $50-75 and a 2-C receiver
for another $100 and he'd have quite a nice starter rig, a poor
man's C-line, for about $300.

Source record: 100828

Gentlemen,
I have a couple of tips: If you like to save money on the cost, I find local radio communications and computer stores have the best boxes free. I usually ship in new boxes and absorb the cost but whenever possible I use real radio boxes. The packing of radios is an art that takes practice. I like to buy 1/2" -3/4" insulation panels from Home Depot and build a survival box around the unit cutting holes and using tubing cut to fit over the knobs. Then place it in one box full of peanuts. I fill the bottom of a second much larger box with peanuts and then place the first box inside. I use a combo of foam and peanuts to pack the sides. On the top I use the same till it's over packed and I close the lid using alot of strong packing tape. I then turn the box over and
re-tape the bottom and all gaps. I label it and then I remember that I forgot to put the manual in. So I start alover again!
Cost of material is HIGH, but wrecking a Valiant will send you to Hell and immediately upon arrival you will receive a 706 with bad audio, no AM filter and not enough wire to make an inverted V for 3885. No, Doran you are not wrong, your price is a net price and in the packing you do what you can to keep the cost down by doing it yourself properly. I try not to use UPS anymore. I heard that the heavier the box or if it says fragile on it, they drop it for fun. It's called UPS frustrational relief. I use US Post or Fedex. I shipped a large transformer in a new 3/4" plywood case that I built using 75-2.5" screws. This was so strong that I thought it would last forever. WRONG! UPS destroyed it somehow. Transformer was saved.
If you want it to arrive safely, discuss the cost with your client and explain clearly the cost of proper packing and shipping. The alternative is to just drop it off at a Pack and Ship center and have the client phone them with a Visa number for shipping charges. I have done this many times also. Works well, but costs the client more.
One more thing, INSURANCE. This can put any BA fan in a potentialy dangerous situation. Stuff that nightmares are made of. Imagine this, you had a mint condition A4 shipped to someone insured for $1000. It comes back destroyed!. You take it to the the office of the shipper only to be told that this SW radio built in 1954 is only worth $100 and that it was over insured. If you think this is bad, it gets worse when they tell you that they don't know if the damage happened on the return trip so they have to check with the other office. These answers are given by a twenty year old pimple-faced punk with a Time Square sleazzy smile and SDony Walkman headphones with direct connection to what little brain that he may have left. You have to ask yourself.....is it worth 7 years????? Nah, it's just an old radio, OR IS IT REALLY???

Complete station for sale in perfect working condition. 9.5 on a scale of 10 for cosmetics (a few very small scratches on case top).

Kenwood 820s with digital readout with matching microphone, external speaker (with filters), external (Second) VFO, and antenna tuner. Also have original manual and a Xerox copy of the tech manual for the radio. Most all the original boxes and manuals for the aux.. equipment.

Best offer takes it away. I am in western Wisconsin (70 miles east of Minneapolis) for pickup or will ship anywhere in the U.S. if the price is right.

Alan,

Welcome to 20 meter AM !

From the North Texas area, I work stations all around
North America. The band has many up's and down's. Sometimes
you don't always hear all of the stations in the toundtable.
This is very different then on 75 meters.

The signals lately have been weaker then they were a few months
ago when stations were running around +60 DB/S9.

Don't give up yet on 20 meters and I hope
to work you soon on 14.286 kc.

I have to disagree strongly. The older Kenwoods (TS-520,530,820,830) are
excellent rigs and would be great beginner rigs. If you had the intelligence to pass you
novice or tech-plus exams, you can easily master "the art of dipping
and tuning" tube finals -- especially if the finals are 6146s like in the
Kenwoods. Also, you don't have to tweak if you change frequency a "little bit" (of course,
an undefined amount here).

Don't stay away from those older rigs -- there great.

The seller should always figure the cost of packing into the price of the
item he's selling. Figure out what your bottom dollar is on the item for sale.
Factor in the cost of packing. That is the 'least' amount you should take
for the item. Then post the selling price at some reasonable amount over this
so people have room to 'haggle over' the price and shipping costs.

If you (seller) wan't to pay for the shipping, along with the packing, factor
that into your 'bottom dollar' and set your 'absolute lowest price' accordingly.

BTW: when I sell an item, I never ship until I receive payment in the form
of a certified check. I don't do COD's.

When I purchase an item I always send the seller a certified check first.
I never expect the seller to send the item before he receives payment.

Harry OM,

I highly recommend the TS820 or TS820S. They are easy to use, rugged
and reliable, have pi-net output (can match anything within reason on
coax feed), cover 160-10M plus a spare band position, can be modifed for
WARC bands if you find you really want them (I modified mine for 30M),
has BUILT IN power supply, has FSK built-in (For AMTOR, PACTOR, RTTY),
is REPAIRABLE if needed, and automatically selects the narrow CW filter
for FSK receive, something the TS430, TS440, TS530 cannot do (they all
have no FSK, the button labeled 'FSK' on the TS430S notwithstanding).
The tuning of an output pi-network is a trivial process you will learn
in about a minute or so of practice. You can find them for $400 and it
will be worth about that whenever (IF) you want to sell it in years
hence. I have been using mine for CW and FSK daily for 19 years now,
and I would not part with it.

'Nuff said?

73 and GL,
Don, W6JL

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.antiques.radio+phono,rec.audio.tubes

We've added a ton of new radio listings at the BONEYARD.

"What IS The Boneyard?" you may ask!

This is a list of observed asking prices for (mostly older) amateur radio and shortwave etc. equipment. Hence the name "Boneyard."

The latest additions are for some VERY obscure radios that you have probably never heard of. Some of them were a big flop and never made it in the amateur market, but you never know, there MIGHT be a few floatijng around out there in a dusty box under a table at a hamfest... ah the joys of digging under those folding tables!!!

Visit the BONEYARD today for a free guesstimate on a radio's price (no guarantee of accuracy, use at your own risk etc. etc.)

http://www.mnsinc.com/bry/ham/boneyard.htm

ENJOY!! 73 de AF4K 'Bry'

739. FRG-7 for BCB DX[ing?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-15 00:00:00 UTC
From: Tim Cook <timcook@erinet.com>
Message-ID: <6r44q6$54f@eri.erinet.com>
Source record: 100671

Hi,
I am going to buy a FRG-7 SW receiver and wonder if anyone has used this receiver for BCB Dx'ing? How is the selectivity? Is it possible to use ECSS using the USB/LSB function of this radio? Is it stable enough for this and are the filters good enough for ECSS? Just a shot in the dark that someone may be using or has used one of these for BCB dx'ing. Even though it is analog readout, I assume the wadley loop circuit provides for good enough dial accuracy to determinie the station frequency....
Thanks for any information please email direct if possible....
Tim

Many of us pick up equipment that just doesn't have the original packaging.

> In any case, any delivery costs should be agreed upon prior to shipment to
> avoid any surprises later. If the seller chooses to use a Mail-BoxesR-Us type
> place for packing and shipping because he is either too inept or lazy to do the

Too inept or lazy? A bit rather capricious commentary? How about those of us that work, and end up doing so at least 12 hours a day? It becomes a necessity that we use these folks facilities to get the packing and shipping done. BTW, I do use them, and I DO bear the cost.

> To highlight this, let's say you were going to a hamfest to sell an item and it

>all your criticisms?!

He doesn't, he lives in a very dense RF environment shared with
commercial and military users. But even if he were in a rural
environment, that's no excuse for operating a dirty radio. The
spectral purity rules apply wherever you are. It is very unlikely
that he can get that radio to comply with current spectral purity
limits, but for little money he can get an ex-LMR radio which
will. Not only will it transmit cleanly, it will receive cleanly too,
and that will be very valuable to him in the location where he
operates.

The HR-2B was about the nastiest amateur radio ever built,
in the post-spark era anyway. I'm really trying to be helpful
by suggesting that the appropriate place for it is either in
a museum of horrors or the scrap box. It is not a radio you
want to operate in Honolulu.

Dear All,

I have for sale a Signal Electric KOB (Key On Board). This is a telegraph instrument for learning the radio code. On a single finished board are a Signal Electric telegraph key, buzzer for generating code, and a brass plate with the International Code listed. In addition to showing the International code, the brass plate also says "Signal Electric MFG. Co. Menominee, MI." Three wire terminals are also on the board for hooking up a battery. The terminals are so wired that the key may be used independently of the buzzer (for example with your ham rig).

Some of the old timers on this list may remember using one of these devices to learn the radio code.

This piece is in excellent shape and works well (I can demonstrate it over the phone if any one likes!). The only flaw is that the buzzer mechanism is missing its' cover. However, this does not affect the operation of the instrument in any way.

$25.00 plus shipping.

Thank you for the read!

Also had one around about the same time. I remember these things about it.

1.- Very hot receiver
2.- Very flashy looking with all the chrome
3.- The top of the unit got Very hot when in use
4.- Got Very good audio reports
5.- Thought it was a Very nice rig :)

Probably be useful for the 6 meter AM revival going on today.

There is nothing gentlemanly about your carrying on about a transmission mode that has many adherants around the world.

If you want to promote the many benefits CW/AM/FM/digital mode activity in the Amateur Service, go ahead - amateur radio will be the better for it.

On the other hand, if all you want to do is complain about SSB (which many people enjoy) and do nothing positive about promoting the other modes, then you should seriously think about handing in your amateur licence - we have enough whingers and knockers without you contributing to the melee.

Some people enjoy SSB. Anything you say or do will not change this one iota. Get a life and do something positive!

>Radio Randy

Humm,

The Kenwood TS850 is a very good rig and is totally solid state... no tune
but it does cost about $900 used.

But I do tune my amplifier to this day and learned on radios you have to
tune. In fact most HF amplifiers sold today require tuning. It's a good
thing to know and is easy. Also makes you able to operate almost any
station in emergencies if you get into the emergency communications part of
the hobby.

I'd stay away from the Kenwood 430 as it had slow switching and did not work
well on digital modes like Amtor.

I would emphasize the radio with what available money you have and then
build around it as you get into the hobby and more time to save up. Don't
skimp on the radio too much inorder to have lots of other gadgets at this
stage of starting into the hobby. I would do with out is a radio that has
the WARC bands, 30 meters, 17 meters, and 12 meters included.

My all time favorites that perform well are Icom 765, 735, Kenwood 940, 440
and 830 or even the well known 520 and 530's ($350+). The 830, 940 and 850
were very notable. If you want to go mobile someday then get a solid state

this time around and when you upgrade, use the old radio for your mobiling needs. You will save money in the long run and generally the 440 or 735 fit well into this category.

Good luck.
Have Fun

You lost me here. How is it that outdated modes are the cause of people being rude and stupid? I've run across rude and stupid people who don't work any modes at all.

ATTENTION ALL

If anyone has downloaded the 1 kilowatt amp project from the Southside Amateur Radio Web Site please scan the linear.doc as it contained a CAP family macro virus.

I have provided a macro scanner on the web site if you do not have virus scanner capable of checking for macro viruses

The current file that is online is clean and is date stamped 8/16/98 8:43am.

Thanks to Bob Bethman N0DGN/4 for the alert

My sincere apologies for any inconvenience caused

773. Prop pitch motor

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-15 00:00:00 UTC
From: Vaclav <vaclav@premier1.net>
Message-ID: <6XoB1.7$94.716335@news.premier1.net>
Source record: 100705

Just acquired what seems to be some variation of prop pitch motor,
allegedly used in " dumbwaiter " in some Boeing aircraft.

Need some help.

It is a 24V DC motor, however it has THREE power leads plus chassis
connection.

Why are there THREE connection?

The (visible) connection to brushes shows them NOT opposite to each other,
as I have expected.
The third connection is isolated from the body of the motor and on the motor
cover it is between the brushes.
I cannot see where it goes.

I have attempted to "move it" with 12 V 15AH gell cell , connecting across
the brushes.
Got lots of sparks flying from my clip leads! (I guess good connection is
must !)

The inside of the motor is covered with black residue, hopefully from
brushes. There is no "after fire " smell.

There is a wooden reel attached with some 1/8 inch stainless steel cable
and I am having a heck of time trying to remove it.

It also have some auxiliary mechanical connection on the motor side. A
fellow ham looked at it and showed me a real prop pitch motor. This one is
definitely smaller.

There is a small level (about 3 inches long) on the motor side, but it
seems to be frozen.

Any idea, besides using it as a boat anchor ? I was hoping for quad
rotator.

Ok guys:

I expected a LOT of feedback on that post. I'm not condemning radios with tube finals, hell, I still own an FT-101ZD and am currently using IT in my shack instead of the 735. But then, I've been around tube rigs for awhile now and, other than tube replacement cost, am quite comfortable with them.

There are a number of advantages to solid state rigs including general coverage receivers and no tuning requirements. These are coupled with lower power requirements while running mobile (you CAN'T argue THAT) and a compact design. Let's not forget memory channels (No, I know you can plug crystals into an old radio, but why?)

You guys can talk all you want about the virtues of tube finals but I would STILL insist on a solid state rig for our club station. That way, all new hams (even the ones who can't program the local repeaters in that new handheld) can operate with a minimum of assistance.

Besides, I've NEVER owned a tube rig that could run 100 watts on RTTY like my 735 can.

I would agree with getting solid state over tubes if the money outlay is even close or you hope to do any mobile HF work. But if money is tight, there are lots of good inexpensive tube rigs out there that allow you to get into the hobby without shelling out a lot of dollars. If you do any CW, I would hold out for a rig that had WARC band ability in solid state or tube.

The 735 may run 100 watt RTTY well because it does not have a power supply built in to cool and the Kenwood 850 runs cool on RTTY and SSTV too. But power supply ability needs to be adequate for long duration transmit times. It should be noted that a power supply (or batteries with a battery charger) is an extra cost item in the equation of buying a solid state rig, something that was not mentioned in the previous posts and needs to be considered as one looks at all the options and cost tradeoffs.

Either way, jump in and have fun.

>> no ALC meter movement. All other bands are fine.
>>

>I have neutralized the finals and aligned the driver cans.

This is surely a problem requiring a re-peaking of the coil pack. Your refering to a "can" has me wondering, as none of the coils to be adjusted are shielded by a can..

It is important that all the coils be adjusted, and in the proper sequence, ie, OSC, then MIX, followed by DRIVE. It is possible to adjust only the MIX and DRIVE coils with good results. The manual does, I believe, give a good step-by-step instruction. This has always been the cure for no alc indication in my T-599's, and the TS-520.

798. WATCH OUT FOR WB6OHV JOHN BARNHILL

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-16 00:00:00 UTC
From: dsrighello@aol.com
Message-ID: <1998081608160700.EAA03477@ladder03.news.aol.com>
Source record: 100730

CAUTION!

Watch out for a John Barnhill WB6OHV. He has made false accusations about me.

I used incorrect information to accuse me of writing a bad check. He did not take the time to follow-up on why the check did not cash. The party who received the check waited almost 3 months to cash the check and the account was closed due to a Divorce. I wrote the party a new check the day after She called and there was not problem from there on.

Now he has a very big Hard-On for me and will not discuss the matter with me.

Just a word of caution in dealing with such a person. Especially if you are looking for equipment and He responds.

My attorney is looking into the matter in Case John decides to try an make any trouble on the swap nets for me. Defamation of caracter is not looked upon lightl by society these days.

This was all done to set the record straight and John, If you read this an apology will settle all. I have always belived as a Christian, to forgive so wether you apologize or not you are Forgiven.

Ron

Sorry for getting the name wrong (oops)

I am not doing this to make enemies from anyone (besides you look like a pretty big bloke <g>)

I am glad that you had the courtesy of warning everyone, but like I said it would have been nice to be told about the problem at the same time via Email (I don't normally browse the news groups).

If I had know of the virus prior to uploading it it would not have gone on the site, but these things happen. I know, I know I should have checked it but I didn't, an oversight on my part, and now I have to wear your (and everyone else's) wraith.

You are entitled to your opinion about me, however, uploading a virus was not premeditated and I have learned to "scan everything" (no matter who the trusted source of the file might be)

The problem has been fixed. If you don't believe me DL the new copy and test it.

Like I said I don't want to make enemies, my sincerest apologies if I have offended or caused any grief to you or anyone else.

Regards
Adam

Don,

You point out a common problem with purchasing over the 'Net. I waited 10 months for a $10 check to clear, even after multiple E-mail requests to the party in question. I STILL have a check, floating around out there, for over $100, that was written about a YEAR ago.

It doesn't pay to do a "stop payment" on a $10 check as the fee is more than the check itself. Also, a "stop payment" is only good for 6 months! After that, the check is good again, but it's assumed that most banks won't cash a check that old (that's a laugh and disproven by the fact mine was cashed after 10 months). I'm told, the ONLY way to fully stop payment on an old check is to close out the account (yeah, THAT makes sense)!

Money orders are the ONLY way to go to eliminate this problem. Then, the BANK can worry about it when they try to balance THEIR account!

Thanks for letting me vent.

I will point out that Word macro viruses DO NOT give ANY symptoms to the person that is infected. The only possible warning is when someone with a virus detection program happens to try to work with that file. That is why the viruses are so malicious. Your view, Ron, is a misinformed one. I work at a government facility and see these things constantly come in. ONLY by a mandated and enforced policy of virus scanning software installation can they be thwarted rapidly and easily.

The only people deserving of such language are those that create these things.

> if you if you have a goddamn problem about me telling EVERYONE ahead of time
> not to download a viruses program then your probly the shithead that put it
> up !!!

Personally, I have no problem with notifying everyone. However that includes the person with the problem DIRECTLY. If not, the problem will not be stopped.

Unfortunately this is simply a sign of these high tecnological times.

I have for sale a very good condition Heathkit HG-10B VFO. It's in great shape, except that at some time a previous owner had hit it with a little blue over-spray from a spray can. It was probably in the line of fire when something else got painted. I think a bit of thinner can remove the over-spray. It isn't too objectionable, and does not obscure any of the panel lettering. It is working fine, and comes with a separate outboard power supply, so it isn't dependent on a DX-60 for operation. Price for the VFO and power supply: $50., plus $10. for shipping.

My point was more the following. Suppose his call is re-issued and the new holder wants call letter plates. He will then be the only one authorized to have them in use on a car. I was not thinking in terms of a collector, which was probably me being dense (not uncommon)!

**I just finished the EMtech kit and it's the easiest to build since
it's done in steps and you step after each step. I recommend a
freq counter and/or an SWL radio w/bfo+ digital readout.

I was short a FET by mistake and one PNP Xstr was bad, but
easy to work around.

It also puts out 5W easy, I got 7W out on 30. Recommend
tha audio filter too, but move one of the poles a bit
lower in freq to prevent oscillation and use the 300K
resistors for gain setting. The option box is nice and
decals for tuning glues on nicely.

858. Trade T-T Triton IV for R4C

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-17 00:00:00 UTC
From: zeitler@ibm.net
Message-ID: <35d838fe.0@news1.ibm.net>
Source record: 100595
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This 544 digital was just completely aligned by Ten Tec a year ago. But now either the dial is loose or the PTO may need rebuilt, not sure which. The dial tends to slip.

No optional filters with the rig. Has the stock T-T mic and the 262G metered/VOX power supply. The VOX circuit in this works very well.

Cosmetically it is around an 8. The front panel itself is okay but the top trim is scratced. This is aluminum say may clean up. heat sink has some scratches and the top cover has some marks.

Other than the slippage in the PTO it is perfect electrically.

I do not want to sell. I want to trade it for a loaded R4C. Something like an R4C with noise blanker and optional crystal filters.

May consider other BAs in trade but really want an R4C.

864. SX-28 filter cap query

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-17 00:00:00 UTC
From: CommQuart <commquart@erols.com>
Message-ID: <6r9rhl$l7a$1@winter.news.erols.com>
Source record: 100601

I am currently restoring a SX-28 receiver. Surprisingly, the filter caps (circa early 40s) appear to be working quite well. I am going to pull them and test for leakage and capacitance. The radio has been playing for several days, so I am sure they are reformed by this time.

My question. If the caps pass leakage and still show rated capacitance, would it be safe to leave them? There is no sign of electrolyte leakage at the seals. I would normally trust most metal electrolytics made during or after the 50s with reforming. What is the groups experience?

I have another SX-28 that has several dead shorts in the power section, maybe papers or filters, haven't dug into that one yet... One reason I am leary...

Peter

867. TS-830S & FL-2100B info. needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-17 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <35D8850F.4752@vbe.com>
Source record: 100604
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I recently purchased a very nice Yaesu FL-2100B amplifier. I intend to use it with my Kenwood TS-830S. The amp specs are as follows: 12 volt keying relay, -5 volts dc max ALC, 100 watts peak to peak max. rf input. The TS-830S specs are: Keying relay rated for 100 volts @ 1 amp, ALC is <-10 volts dc.

I have been advised not to utilize the ALC hook-up but rather to add RF NFB resistance (20 to 30 ohms) in the line which controls the input to the cathodes of the 572B tubes. This reportedly allows the rig to drive the amp without overdriving it by limiting rf input to the tubes. Ordinarily, the rf output of the rig can be lowered by the carrier control in CW but in SSB the only control is the mic gain which may drive the SSB ALC but which does not really control output. The TS-830S puts out about 120/130 watts peak to peak RF on SSB.

Interested in information from those who have done this mod to lower rf to an amp or those with other ideas on this amp/transceiver pair.

Hi Peter,

I don't have an extensive amount of experience with old electrolytics but those that HAVE leaked, caused some interesting corrosive effects below the chassis.

With all I've read, over the years, concerning old electrolytics (and the advice of restorers) I feel it's better to be safe than sorry. Of course, if you have an ample supply of cash, it doesn't hurt.

If you don't feel like blowing another $20-$40 or more, replacing those caps, use your own discretion. After all, YOU will be the one doing future repairs on that radio, nobody else.

Radio Randy

883. VF-1 with DX-60B???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-17 00:00:00 UTC
From: wmeara@erols.com
Message-ID: <35d778f1.384644443@news.erols.com>
Source record: 100783

I just finished re-building a Heath VF-1 VFO. Lots of fun. It's up and running.

I want to use it with my DX-60B, primarily on AM phone.

The VF-1 was designed to be used with the DX-40, DX-35 type transmitters that used cathode keying.

The DX-60B uses grid block keying.

I'm trying to figure out the best way to interface the VF-1 with the DX-60B. The accessory plug on the DX60B provides HV and filament voltages, no problem there. However, pin 8 of the accesory plug on the 60 provides -60 volts key up and (a think) 0 volts key down. The VF-1 is really just looking for pin 8 to go to ground on key down, and to be open on key up.

I'm looking for an easy way of doing this. How about just putting the -60 volts on the VF-1's 6AU6 grid, thus shutting it down while in the receive mode. Will this be harmful to my health?

Anyone got the adjustment portion of the VF-1 manual?

Thanks,

73 Bill N2CQR

There aren't a lot of good new rigs in that price range, but some very
good used equipment can be had around $900-1100.

Some candidates would be Icom-761, 765, Yaesu 890, 990, Kenwood 850, 940,
early 950's.

Shop around, including places like Burghardts, AES, etc.

73 and tight lines,

Hans, K0HB

899. Sams Photofacts, low as $0.25 ea

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-18 00:00:00 UTC
From: vintel@aol.com
Message-ID: <1998081818454900.OAA09751@ladder03.news.aol.com>
Source record: 100549

I'm way over stocked on some Sams Photofacts sets & I want to get rid of them so the following prices apply until the excess Sams are all gone. ONLY $1.50 PER SET (per SET, not per folder). 10 sets $7.50, 25 sets $12.50, 50 sets $20.00 & 51 or more sets at $0.25ea. All + S&H.

For a list of available numbers please visit my web site at
http://www.vintage-electronics.com
click on "Schematics" & check out the RED SALE SECTION down near the bottom of the page.
While visiting the site you may also find a radio or two that you'd like to have among the 2-300 sets that are listed. Also have some tube audio equipment, communications gear, test equip, vintage tubes & other collectible electronics.
Thanks
John

Hi Harry,

One of the most popular transceivers ever made is the Kenwood 520 series. Thousand of hams still use them today. You can buy one for $300. Where? At any hamfest, or on the Net. I suggest that rather than spending $1000, you start out by buying a good older, inexpensive rig like a 520. Get your feet wet first, get experience, enjoy yourself, find out what you like and dislike, and what you really want, before you spend a lot of money.

Good luck,

Bruce Sugarberg, WA8TNC

Antique Electronic Supply in Tempe AZ has replacement decal sets for
many of the old tube radios and generic ones too, and perhaps dry
transfer as well -- useful front panel words and numbers and logos,
not just letters.

(to whoever mentioned it: Thanks for the remark about date-codes on dry
transfer. I'd noticed that my 25 year old sheets weren't working so
well. :-)

915. BC-348N info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-18 00:00:00 UTC
From: Walter Spector <wws@w6ws.corp.sgi.com>
Message-ID: <35DA1584.AFA9615E@w6ws.corp.sgi.com>
Source record: 100565

All,

A Wells Gardner BC-348N recently arrived in my shack.
It is in pretty good condition, a few obligatory
scratches and some worn paint on the knobs. Other
than that it seems to be in ok condition. Also, it
was converted to 115 VAC sometime in it's past. I've
not turned it on yet, but the PO claimed "it worked
last time he turned it on".

Anyway, does anyone have a manual for such a beast?
Photocopy is fine. Or should I simply call Fair Radio?

Hitorians: FWIW, the Ken Corwin web page on BC224 and BC348
states that the highest serial number he has encountered
on a 348-N is 8913. Mine is somewhat higher at 10036.

916. FIRESTONE FIRE CHIEF??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-18 00:00:00 UTC
From: Tim Cook <timcook@erinet.com>
Message-ID: <6rd88a$j6o@eri.erinet.com>
Source record: 100566

I have an old Firestone Fire Chief (small 5 tube table radio) that I forgot I had while cleaning out the garage. It says it is made by Firestone Tire and Rubber Company, Akron Ohio
I can't find the original model number, the part of the sticker that has that is missing. It has a CODE NO. 307-6-9030-A. The case (bakelite?) is in good shape, although it appears to have been repainted. it has a slide rule dial on the front and 2 knobs. The dial glass is good, and the radio plays fine. I would like to know more about it such as when it was made, how much it might be worth, I am selling off everything I am not using. Thanks for any information..

925. Re: replacing tubes with FETS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-18 00:00:00 UTC
From: Tom Mills <tmills@flash.net>
Message-ID: <35DA497C.244F@flash.net>
Source record: 100575

Yes it can be done. you need to watch the voltage rating of the fets
or run them on reduced voltage. You will have to check the input
capactance, and if the type 30 is a pentode (I don't think so) the
Miller capcitance of the fet might hurt at high frequencies. You
can cascode two fets to reduce miller capacitance.

I replaced the tubes in a BC frequency meter with fets and
it worked out just fine.

Basically look for a fet that has the same approximate gm, and bias
it at about the same current as the tube was biased. An N channel
FET biases exactly like a tube. You can adjust the bias with the
size of the source (cathode) resistor.

Many years ago my company (National Semiconductor) made high voltage
FETs and sold them as tube replacements (packaged in tube sockets).

Good luck

Tom

926. WTB: Old tubes!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-18 00:00:00 UTC
From: Steve Rimsa <srimsa@eclipse.net>
Message-ID: <35DA4AD1.205B@eclipse.net>
Source record: 100576

Hello!

Do you have an old box of receiving tubes laying around the shack you'd like to get rid of? I am looking for old pulls from radios and tv's preferably mostly 6 an 12 volt types both minature and GT styles as well as older 4, 5 and 7 prong 2 digit types. Buying tubes "as is" at realistic prices for untested "pot luck". Let me know what you have. These tubes are for helping me to estore old amateur tube equipment and not for resale. Not looking for audiophile pricy stuff or collector bottles..."just plain old tubes".

Will respond to all who reply. Thanks for reading my posting & 73's

Steve

Because binary files can take a long time to download, occupy lots of space on the service provider's system, and a newsgroup is not the place for them. This is a Usenet convention. Some ISP's will discontinue carrying a newsgroup if people make a habit of binary files, or they have software that detects binary files and will not carry the posting. If you want to post a pic then find one of the alt.binaries groups or a web page and place it there and post a pointer to it from the newsgroup.

From: mmagill@gte.net
Message-ID: <6rala8$b90$1@news-2.news.gte.net>
Source record: 100623

Someone gave these to us, they're a couple of (probably commercial?) radios marked "G.E. Century II" and operate at several frequencies in the neighborhood of 466 Mhz. We're wondering if they're useful for anything in the Ham World, or just suitable as anchors... :-) They're about 10 inches square, a few inches tall, and have a mass of pins coming out of a connector at the back.

Anyone recognize these critters? Please E-Mail, or reply here.

Thanks -

Mark Magill

This is a kind of tail wagging the dog question. I live in a very small apartment, so when I get around to buying my first radio, it is going to hve to have a "small" antenna and a power output that won't fry my brain. So, what frequencies (tech level) should I consider?

Just to clarify...

If a check is cleared after 6 months you have the right to have it returned to the payee or be reimbursed by the bank if they don't want to return it. The bank people will probably tell you otherwise but don't believe them. They'd rather you ate the loss than themselves. I might add that a stop payment is only good for 6 months because after that the check is considered "stale dated" and is no longer valid. Again, the cashing bank is a fault for accepting it and the original writer can insist on reimbursement. As above, the lower level peons will argue with you. In the event of a disagreement, always ask to talk to the operations manager. A telephone call to the auditing department works wonders also.

957. FS or Trade: Rare Mosley Speaker for Mosley CM-1 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-19 00:00:00 UTC
From: davek2dp@aol.com
Message-ID: <1998081904045300.AAA15148@ladder03.news.aol.com>
Source record: 100494

Matching speaker for the Mosley CM-1 receiver in moderately good condition. Cabinet would need to be repainted to be considered a 10. Asking $30 plus shipping or would trade for a Hallicrafters or National Speaker. Obviously, I am not trying to gouge pricing (as with other speakers that people are asking $100 + for. So lets bring this hobby of ours back down to earth and do some horse trading !

73,
Dave, K2DP, St. Louis, MO

Wade,

I thought that the Techceiver was a superhet. I seem to remember WRL point
that out as a comparison the the popular Heath sixer lunchbox at the time.

Hi Bill,

I have forwarded your request to Hallicrafters group,
in the hope that someone there may be able to help.

You might want to subscribe yourself. If so, send the
following message:

subscribe hallicrafters william.m.michaels@lmco.com

To: Majordomo@qth.net

Then follow the instructions you receive.

Good luck,

Bruce Sugarberg, WA8TNC
bsugarberg@freewwweb.com

I was going to say that too, but I was't absolutely sure. There was
an article in 73 in the early sixties about the rig, from someone
connected with the design, and it went on about how they got the local
oscillator to be reasonably stable. If it's got a local oscillator,
it must be a superhet.

The only other thought is that World Radio Labs put out a similar rig
that did have a superregen receiver.

Of course, the superhet in the rig was probbly not the world's best
receiver. Better than a superregen, but probably lacking in selectivity
and stability and maybe even sensitivity.

Just a quick note. The 30 tube is just a simple triode. You should have no problem coming up with a suitable solid state circuit.

There are 3 models of the FT-101E. No, I don't mean the E, EE, or EX. There was an Early E, Mid E, and Late E model. The Late E is about the same as an F.

Only the Serial number will tell you. A Late is worth more than an Early.

Know what you are buying!

Al

Still have some parts left from this radio. Lots of IF transformers, dials, power choke, selectivity switch, spinner weights. Re: the selectivity switch - someone asked for this and did not send the money so its up for grabs here. If that person contacts me in time,he can claim it, but if someone comes along and wants it, it will be sold.

1007. Looking for Robert Fowle, the "Hammarlund Historian"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-20 00:00:00 UTC
From: dpatton@bellsouth.net
Message-ID: <MPG.1045420b251a01f2989685@news1.lig.bellsouth.net>
Source record: 100389

I ordered a set of HQ180 manuals from a Robert Fowle (KC8DBC), who bills himself as the "Hammarlund Historian." I sent this fellow a check for $65 for these manuals back on 5/27. That check has been cashed, but I received no manuals, nor any answers to my numerous email inquiries. The only info I have on the fellow is this:

Robert Fowle KC8DBC
1215 Winifred..Jackson, Mich. 49202-1946
ICQ #649056
Email address: hammarlund@acd.net
or hammarlund@qsl.net
WebPage: http://www.qsl.net/hammarlund

The web page is still up and running.

If anyone knows or is in contact with this fellow, I would very much appreciate them advising me of his whereabouts or asking this guy to either ship my order or return my money immediately. If anyone is looking for Hammarlund manuals, I'd advise them to look elsewhwre.

\Doug

1008. fs-WRL Globe Scout 680 $99.99+

Date: 1998-08-20 00:00:00 UTC
From: rlucch2098@aol.com
Message-ID: <1998082001265500.VAA14907@ladder01.news.aol.com>
Source record: 100390

Hi Guys;
I have for sale a Factory Wired WRL Globe Scout model 680.
I have a nice copy of the manual, the front panel is excellent, correct knobs, etc.
The cabinet has a few normal marks, but no dents or real bad areas, quite presentable. NO Corrosion on the chassis! The wiring is excellent of course, I had a kit one and believe me, theres a big difference in the wiring. The S/N ends in "W", which means its a factory wired one.
The Scout is putting out power and all seems normal. This does'nt mean that a little TLC is not in order. Maybe a cap here, a resistor there, you know!
Price is $99.99 Plus shipping from Long Island, NY 11758.

Message-ID: <1998082001442200.VAA17833@ladder01.news.aol.com>
Source record: 100394

Hi Guys;
Here is an unusual Central Electronics item. Its called an GC-1 Gated Compression Amplifier.
It matches completely, the 100V & 200V transmitters, same color and size.
The paint and condition is exc. but there was a resistor smoking up. I tried to "jumper in" another but it too started to get hot. All this while bringing up on a varic at 55 vac.
I removed the tube which was being feed by this resistor(53 ohms) and it did'nt get hot then.
I am not a tech and have no idea wat the cure is so i just stopped, marked the resistor and put it back in the case.
I have no manual and have no idea wat its worth to a fellow who would like to add it to his CE collection!
Oh, it has an "eye tube" to set up the gain!
Will someone make a reasonable offer please?
Thanks es 73....Rich WA2RQY (1961)

Yup, I prefer my 600A to a TV7- mainly for the fact it'll read in actual
umhos.

I need to make some room so I'm considering selling my pair of Collins R391 receivers. They are both in very good condition and complete with meters and covers. I'll also throw in 1 set of the remote control units. These units let you remotely control a number of 391 receivers. One is directly connected via a cable to a 391. The second is a remote unit that hooks up by a single twisted pair of wires to the first. Both units can control the 391 using a telephone like dial. I don't remember the model numbers right now but Fair Radio sold them back in the 70s. I also have 1 original manual. I'll sell the whole package for $1000 however you must arrange local pickup. I don't want to ship. I'm in Tampa Florida.

1032. Looking for basket case CW transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-20 00:00:00 UTC
From: troglodite@aol.com
Message-ID: <1998082017060000.NAA23611@ladder03.news.aol.com>
Source record: 100414

Hi,

I'm trying to get back on 40 meter CW after an absence of 33 years. For nostalgic purposes, I'm trying to re-create a station similar to what I had back in the late 50's. To this end, I already found and restored a Hallicrafters SX-120, and have an SX-117 as a standby. Since I built all my transmitters back in the 50's, I'd like to do the same again, but finding such parts as variable caps for a pi-network, a ceramic plate cap for a 6146, and some other goodies that were common in the 50's is more difficult. Unfortunately, I'm on a very limited budget as well. Does anyone have a homebrew or old kit CW transmitter they would part with cheap? If it isn't too bad I'll rebuild it - else I'll use the parts.

If you're a trading sort, I work with computers and have loads of 486 motherboards, chips, drives, etc. that I could trade. Even have a few complete 100Mhz 486's less monitors.

I'm also into restoring all sorts of ancient vacuum-tube gear. Have some test equipment, old audio amplifiers etc.

Doug Moore

1038. FS: WRL, Clegg, Tube tester

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-20 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <6rhn7c$tb7$1@camel29.mindspring.com>
Source record: 100420

Trying to scrap together the funds to pay for the next round of college for my daughter and must sell a few items:

WRL Globe DSB-100 Double Sidebander, looks good outside with manual , rare find today $100.

Clegg Thor VI 6 meter AM/CW Transceiver (have two so will sell one). This one has a manual and a file full of notes and the Rf piece looks good inside and out. The Mod/PS deck is also good altho someone painted the case white. Working with crystal for 50.250 altho full VFO control. Perfect for 50.4 AM and does CW too. $100.

Philco 9100 tube tester (Philco version of the Hickok 600 series) with book and several update rolls. With cover and handle for carrying and the top cover comes off when in use. This is a nice one $75.

Prefer pickup in the Atlanta area. Any shipping and packing extra.

Might drive 100 miles or so if that will help.

Buy all three and I'll throw in a D-104 mic with PTT stand.

As always e-mail answers directly to me not the newsgroup.

I have not been able to find a web page on these mods. But I was able to get my hands on an Oct 74 QST with the RIT mod. The next problem is finding that diode that is called out for it. It needs a VC6615, which every place I have called says they have never heard of it. The source for the diode listed in QST has a disconnected number. :(

1045. Sneakpeek explanation and summary for rec.radio.amateur.boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-20 00:00:00 UTC
From: sneakpeek@talkway.com
Message-ID: <fOWC1.4469$Mw1.927852@c01read01.service.talkway.com>
Source record: 100427

We developed SneakPeek postings as a result of many Usenet users' desire
for a summarizing tool that would help them skim through the most active
threads. Thus, SneakPeek postings are intended to help users with limited
time keep abreast of group discussions, stay in touch with more groups,
and check out new groups quickly.

Usenet is an environment where every voice should count equally. However,
while some users have found SneakPeek postings useful, others have tried
to shout it down, potentially resulting in the tyranny of a vocal few.
Therefore, we encourage all to post their constructive opinions so that we
may democratically decide if there is room for SneakPeek postings in Usenet.

Talkway, Inc.

Sounds like by first novice transmitter that was
built back in the 50's from a schematic in the
ARRL handbook. I didn't have to paint the cabinet
with a black wrinkle finish, they came that way,
from a company called 'BUD' I believe..

I used dry transfer lettering on mine but it took
a lot of time and patience to smash the transfer
into the grooves in the wrinkle finish. The only
advantage was that it did not rub off very easily!

Good luck with the labeling,

Dennis

I will be bringing (not shipping) to the Gaithersburg Fest a working Valiant I (panel very nice, case nice-repaint, insides much rework, solid-state rect. new lytics, etc.) $285. Viking II/122 VFO working fine (insides like-new, panel has some noticable wear at each side but all else vy nice) with coax relay, $275. If any interest, I'll bring an SP-600JX, panel, knobs, dials, meter all look like new! Works fine, xtal channels inop, chassis has silver paint on it (I know... don't ask!!) $225. I'll be looking for an SX-28A. de Jeep - K3HVG
See you all at GAI!!!

I have been given a heathkit Sb230 amplifier . I need the following
missing mechinical parts . .. the care , the plastic piece that goes
over the meter (I think it's red) and the book .If I could borrow
the book or a copy of the diagram . I know Heath sold the cases at the
Maimi store surplus many years ago ..
Any help would be appreciated .

1056. FS: Collins 618T(3) with accessories

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-20 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <35DCBF0A.C2348E68@calweb.com>
Source record: 100438
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Collins 618T(3) RT set with all modules, MRC internal mount assembly and all interconnection cables to include power relays, fuse blocks, Antenna Directional coupler (like S line), connection points for auxilliary 28VDC to 115VAC 400 Hz inverter (runs blowers and servos in set), power cable stub (28VDC), control head cable, control head (MRC-95 style with full mode and frequency selection in addition to directional wattmeter meter, and phone patch, amplified speaker, microphone with connector, and a complete copy of the technical manual. All that is required is to adapt the smaller avionics 400Hz converter, add 28VDC at aroud 40 amps, and press the mike button for a nice 400 watt pep output 2-30 Mhz usb/lsb/cw/data and 100 watts output AM transceiver. This is a hybrid unit with all low level audio and synthesizer hardware done solid state with the transmitter and receive RF sections done with tubes. Transmitter uses a pair of 4CX250B in Class AB1. The master clock is good to 1part in 10E-6 per month, frequency interval is 1 Khz.

The hole pile, RT checked, as noted above $500 plus UPS from zip 95827. Note Fair Radio gets $600 for the RT alone unchecked. I have a few of these sets left and I sure need the room.

Tnx for the read

Bob, KE6F

And don't forget, the TV-7 makes an excellent prop for movies in which atomic weapons are armed by the use of complicated and diabolical-looking machinery. They just don't make diabolical machinery like that anymore.

8/20

For Sale:

Dyna ST-70 / PAS-3 / FM-3
Fisher X-100
Sansiu 500a

ST-70

Fully Rebuilt to stock specifications with new resistors, new film caps, new internal wireing, gold Cardas RCA jacks, binding posts and AC cord. Shiny chrome. Brown cage. Strong quad of EL-34 and pair of 7199. This unit has been modified by replacement of rectifier tube with solid state/ diodes. Quad cap has been removed and idividual sections relocated under the chassis. Includes copy of manual and my personal notes file (180+ pgs). This unit looks and sounds great! Some feel that the changeover to diaode recitification improves the sound; here is a good way to find out !

$325.00 + shipping

PAS-3

This is an original factory wired unit in very good condition. It is stock. In good working condtion and sounds wonderfull.
Includes copy of manual and copy of my personal notes file.

$160.00 + shipping

FM-3

This is a good original and stock unit. Strong eye tube.
Wonderfull sound- makes FM enjoyable! Some scratches and smudgeing of lettering. Includes copy of manual and copy
of my personal notes file.

$135.00 + shipping

I will sell as a trio for $575.00 + shipping

Fisher X-100 integrated amp

This unit is in good working condition. NOS powertransformer from the Fisher Doc. New coupling caps. Just back from tech check up. Includes all tubes. Brass face is overall clean with some corrosion around knobs. Some of the knobs are MIA. No case. Includes all tubes

including strong quad of 6bq5. The 6bq5 series of amps are regarded as some of Fisher's best sounding amps. This unit is ready to play !

$150.00 + shipping

Sansui 500a

Unit is just back from an electical checkup. With case and strong set of tubes. Unit looks and sounds wonderfull ! The transformers in this unit are some of the best ever made. The Sansui transformer group broke away to form Tamura; world renowned in audiophile circles for their quality.

$135.00 + shipping

1065. wrinkle paint any hardware store any color

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-21 00:00:00 UTC
From: lurch@theramp.net
Message-ID: <35dcbbc7.5427850@news.theramp.net>
Source record: 100447

I've been painting motorcycle parts thge last few days with plain old black rattle-can Rust-Oleum. This is a beautiful gloss-finish paint if
baked on while wet [shoot it and run it in the oven at 350 just that quick and bake for an hour and you get black [in my case] "glass" and very durable--slick as powdercoat].

Well, my motorcycle swingarm won't fit in my oven, so what I did was give it [at ambient temp--80 deg F and 80+% humidity] 2 even coats of Rust-Oleum 10 minutes apart, and set it betwenn 2 1500-watt forced-air space heaters out in the shed--the little $20 cheapos you buy anywhere.
An hour later [it says on the can recoat within an hour or wait 24] I pulled it off the heat and re-shot it still hot...and it wrinkled beautifully, nice, even, consistent wrinkle size, a ***perfect*** match
for the paint on my BC-221!
I guess "within an hour" only applies if you're air-drying. Next week I
repaint an old beater BC221 cabinet by the same method to see if the results are repeatable.

"Mike Warren" <mwarren@fs.com> wrote:
>So if you "have been very pleased" with the 600A, why get the TV-7?
>What does it do that the 600A doesn't?

1) You can't leave the 600A out in the rain;
2) You can't as easily over-inflate the value of the 600A; :-)
3) My TV-7 makes an excellent footrest;
4) The TV-7 has that no-maintenance military finish - you don't have to clean it, because this grey gear always looks the same to most people whether you do or not.
5) You will never be a *real* BA-er unless you have at least one complete test bench solely equipped with MIL/JAN equipment, bearing cryptic acronyms conspicuously on its labels; you don't have to *use* it - you just have to *have* it. It's like the six-pack of Bud in your saddlebag if you ride a Harley - you don't have to like beer, but you're out-of-uniform without it;
6) Visible and brand-less numbers like "TV-7", "USM-32", "URM-25D" and "OS-8" evoke your immutable mystical knowledge of the "ether" and its complex, arcane behavior within the vitals of ancient firebottle-bearing boxes, and help to convey that such insight is inaccessible & unfathomable by mere visitors or family members not thusly ordained. On the contrary, monikers like "Hickok" or "Hewlett Packard", however impressive to fellow cognoscenti, will have these folks subtlely suspecting you're into old cowboys, old computers or maybe even old cars - "ho-hum" things that most anyone can understand;
7) The TV-7, with its stock military settings guide, is a far more useful therapeutic tool than the 600A for clinical treatment of those with substance addiction problems or impatience: just give them a dozen assorted sweep tubes, two complete tube manuals, and a quiet, locked room without an internet connection - they will stay out of trouble for at least a week, and test better afterward themselves.

Source record: 100463

I have for sale a very good condition Heathkit HG-10B VFO. It's in great shape, except someone has oversprayed some of the front panel with a bit of blue aerosol spray paint. I think it was in the line of fire when something else got painted. It can probably be repaired with some paint thinner and patience. It isn't too objectionable and doesn't obscure the panel lettering. It is in fine working condition, and comes with a separate power supply, so it isn't dependant on the DX-60 for operation. Price for VFO and power supply: $50., plus $7. shipping.

Sorry - I forgot one of the foremost advantages of the TV-7 over all others: Like all heavily-cased and sealed MIL gear, it is *ideal* for gear-flippers & barnpickers to profitably resell! No packing required - just tape it up & tag it. This is a continued benefit to the user when sending it out for the recalibration it will need.

I have the following items for sale. Prices do not include shipping:

National NC-270 "Cosmic Blue" rx with matching speaker. Works fine, excellent front panel, all knobs, etc., original manual. $160.

Heathkit SB-10. I can't test it, but it looks fine to me. $40.

Curtis CMOS Deluxe keyer (I know, not BA). Works fine. Needs AC cord. $30

EF Johnson 500 RF (desktop) unit. No PS. All there, looks good. $400.

National 6-2 VFO. Looks great. $35.

MFJ 989C Deluxe 3KW tuner. As new. $160.

National NC-300 Converter Box with 6 meter unit. $60.

Hallicrafters TO Keyer. Just fine. $40.

National NC-108 FM Rx. Very nice. $55.

0-5 RF Ammeter NIB. $10.

Thanks for reading,

Gary Youney K5QT

I also have an SX-28 receiver and had to replace the filter caps when I restored the unit. The SX-28 has an octal accesory socket on the back which is not used when the radio is used with the standard Hallicrafters PM speaker. However, this socket was used to furnish magnetizing current to an Electrodynamic Speaker used in the Jensen/Hallicrafters bass reflex speaker system. The presence of this speaker provides better power supply filtering and places less stress on the electrolytics. My SX-28 sits atop one of these Jensen speakers and also has the metal-cased speaker. In any event, my experience with old radios of all types is that the really-old original electrolytics may work for a while but will catastrophically fail a short time later. They will begin to run hot before overheating completely and eventually shorting-out the power supply. In some cases they will cause the vacuum tube rectifier to fail or overheat the filter choke possibly damaging it. Often they will leak causing corrosive chassis damage and in extreme cases have been known to pop, i.e. explode, making a real mess. The worse case situation is where the line fuse fails to prevent the power transformer from overheating and failing!

It is simply not worth the risk of leaving the original ones in unless you intend to use the radio very occasionally or not at all. The only filter capacitors that usually do not need replacing are the oil-filled type.

While on this subject, it is worth recommending that the vacuum tube rectifiers should never be replaced with diodes even when equalizing resistors are used. The vacuum tube rectifier provides a gradual build-up in B+ as a result of its filament warm-up time. This reduces the stress across and the surge current in the filter capacitors as well as the other components in the radio.

From: Jack <friday@ccnet.com>
Message-ID: <35DE3538.E844CA02@ccnet.com>
Source record: 100484

Looking for a receiver to use for my "AM" operating position. I don't want a cap job waiting to happen (e.g. SX-28). Have become interested in the NC-270 and the like. Would rather not a Hallicrafters model. It should be in very good cosmetic and operating condition (re-capped a plus). If you have anything that you think would fit the bill, let me know please. A manual included would be great too.
73's,
Jack

Source record: 100338
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono

Friends,

I have a Signal Electric KOB (Key On Board) for sale. This is a key mounted on a wooden board with a buzzer and a brass plate. The brass plate has the International Code as well as the text "Signal Electric MFG Co. Menominee, MI". This was a device for learning the radio code. I believe this dates from the 1950s.

There are three binding posts on the board too. The terminals are wired so that the telegraph key can be used without activating the buzzer (for example if you want to use it with your ham rig). Device looks good and works well too. Properly adjusted, the buzzer puts out a nice sound. Only flaw is that the buzzer is missing its' cover (which is typical of these sets and does not affect the operation of the set in any way).

$25.00 plus shipping.

Thank You!

Hi, Hamish ....

Thank you for the information and look up. The rig is built like
Collins military gear. When I tested it years ago, the receiver section
worked good but had bad distortion. Some day I will get back to it and
repair it. Sorry for the delay but we have had bad lightning stormes.

> W3GEO

Hi, George ....

Thanks for the reply. An earlier reply identified the model TR-9 as "a
1969 built solid-state 10-watt VFO controlled AM/CW transceiver covering
2 to 12 MHz .... for 12VDC operation, with optional power supplies"

The unit is built like Collins gear with rotary inductor antenna tuners.
This is then a Viet Nam era radio although I never saw one back then and
I was there twice .... Hi.

Hi I wonder if anyone has any info on the following
pieces of Collins Equipment, also comments etc.
Collins CT-580 Tx/Rx ?
Collins RT980
Collins GRC-171 TX/RX ?
Also any thoughts on the Collins 651S-1 Receiver
I have 5 of these in various conditions.

Many Thanks
Alec Fraser

1118. SBA 301MS help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-22 00:00:00 UTC
From: EC Therapy <docshok@sunlink.net>
Message-ID: <35DEE28B.372D@sunlink.net>
Source record: 100351

I was given an SBA 301MS. It xmits in the MARS bands, and I would like to return it to a usable freq for me. THere are the "OSC ADJ" controls inside, and I was wondering if anyone could give me information on changing this over. If anyone has any info about this rig, I would appreciate it. I will be donating this to a school in the area for club activities, and I would like to have it in working order.... also, it is making a constant "humming" noise.

Thanks,

Paul

1119. FS: More Vintage Microphones

1121. FS: TR-4C Last chance B4 flee

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-22 00:00:00 UTC
From: Cufaude@world.std.com
Message-ID: <35deae6b.14340368@news.std.com>
Source record: 100354

I have a very nice TR-4C for sale.
I would say its at least an 8 on a 10 scale. The face is perfect.
Knobs, glass, dial, lettering all in great shape. Full output on all
bands. (200 watts on 80 meters). I say an 8 only because I think the
cab was repainted. But it looks great.

It comes with the AC-4 PS. That's the one without the speaker.
Also a Turner plus 3 mike. (came with it when I got it.)
Covers all of 10 meters. I think the TRs came that way but not sure.
Just FYI. All works fine and in good shape.
Also have manual.

I'm only selling because I want another drake and can't afford both.
I require prepay and postage. If the rig is not sold by the 28th its
going to Boxbourgh flee. I will pack it in two boxes with the stuff
they sell at UPS. It should get there safe. (I've done it before.)

If you want, make me an offer.

Frequently, RARE is in the mind of the holder.

The numbers, as suggested about the SX-88 in that listing have recently been called into question.

It certainly is an interesting piece. However, the piece itself may be less interesting than the outcome of this event.

Hello, My name is Hugo Holden, I'm very interested in pre-war tv for example the Andrea 1-F-5 or kitset Tvs of the time. I will pay well for one but better than that look after it properly and restore it to perfect order.I have some radio stuff if a part trade was required eg a rare S.G.Brown horn speaker 1922 and a NIB (beautiful box) Arcturus Wunderlich A tube. Kind Regards Dr. Hugo Holden

I've seen these units being "offered" for sale on the <group>
before--often with the seller looking for offers over
1400 bucks. Sure glad Mr. Halligan made 50,000 SX-28
receivers! At least I can afford to own of those beauties, and
an SX-42 as well....

From: Craig Smith <ip500@roanoke.infi.net>
Message-ID: <35DF5F21.CBB@roanoke.infi.net>
Source record: 100380

I'm always looking to purchase early Navy radio/wireless [1900-
1920's vintage] equipment. Was strictly into shipboard stuff, recently
started to add aircraft and shore based stuff to the pile.
Just finished installing a 1 KW shipboard station in my office.
Been in storage since my move a year or so ago. SE1075 quenched gap
transmitter w/ the SE-143[IP500] receiver setup. Even have the motor-
generator [all 600 pounds of it]!
Anyway, I like the big huge spark stuff as well as the smaller neater
sets. The bigger and heavier the better.
TIA, Craig

Paul:
I'm pretty sure there was no service manual as such for the 22s.
The only manual was the one which came with the rig that had
operating instructions and some service information in it, all had
a dark brown jacket and were small format.. If you don't have that
manual I might be able to come up with one. Also I think I have
some other service info on them in my files.

I need some help for a friend. He just picked up a FT-73r, and wanted to mod
it so that he could listen to his businesses freq but not x-mit on it. However, the
radio dosen't work much outside of it's designed limits. RX drops off pretty fast. He
says that there's a pot inside that'll widen the radio's RX and TX up. But without
the service manual, figuring out which it is isn't easy. Can anyone help him out?
He dosen't have internet access, nor even a home computer, so I'll relay
messages for him.
P.S., if you think he's doing this to mess around with other freqs, he's most
definately not. He's 67, and he's a Vet who strongly believes in not breaking the
law. I've known him long anough to know that he's straignt. Besides, as a precaution,
he's going to set the Tx freq to something so far out of band that TX power will be 0
watts. With this ht, that's easy.

> Anyway, does anyone have a manual for such a beast?
> Photocopy is fine. Or should I simply call Fair Radio?

from my 4 decades of index cards...

a manual on the BC-348 is AN08-10-180 (for the RCA version)
AN08-10-112 (for J, N and Q versions)

see also 73 magazine, Sept. 1976, p.84 for circuit update;
73 magazine, June 1964, p. 88
Surplus Radio Conversion Manual, Vol.1, p.22

(I probably have the 3rd item on the above list)

200 to 400 KHz, 1.5 to 18 MHz in 6 bands; AM and CW
power input
28VDC (or modified for 115VAC)
220VDC @ 70 mA
audio output is 300 ohms or 4000 ohms
has crystal filter, AVC-MVC-BFO

1158. Teletype stuff

Newsgroup: rec.radio.amateur.boatanchors

Any TELETYPERS lurking around?

I just came across a stack of originals of one of the very first publications of the "Amateur Radioteletype Society" (which must have been sent out in the late 40s or early 50s). It even has a full-face picture of "the originator of amateur radioteletype" -- John Williams W2BFD -- working inside a rack of rtty equipment...

If you want TWO of this nostalgic booklet, just send a stamped (3 oz. postage) 6x9-inch (or larger) self-addressed envelope and a $1 bill to me at PO Box 73, Paramus, NJ 07653-0073. (for a 72K pix file of the front cover by email, send me an email at jsee@idt.net).

= = =

Also have two boxes of teledeltos fax paper used in WESTERN UNION TELEFAX machines. Each box has two rolls of the special paper. $10 + postage for 5 lbs. to same address as above. (If you're going to order it, send me an email so I can tell others not to send any money after the two boxes are gone...)

73,
Jim W2JC ex-W2BVE

Hello Bruce

I am indeed impressed. I wonder how well that
receiver performed? Sounds like its market is more
"investment grade" than "boatanchor collectable" driven.
Also makes me wonder about the other 300 or so still sitting
in garages or cellars waiting to be found!

Pete

Web Site Update!

THE PHILCO REPAIR BENCH now has an expanded Cathedral ID Guide section.
Besides the previous model charts, there now are:

* Color photos of models 20, 70 and 90
* Chassis & tube locations
* Knob styles used
* Serial number decoding
* Cabinet date stamps

and all the rest of the Philco Survey categories to help you identify your set.

Source record: 100321

Hello, time to do a little shop cleaning over here.
I have parts on a drop in chassis for a Collins, I don't know what
it's from, but I'll describe as best I can. It's chassis is about16 inches
long,
about 8 inches wide, at all 4 corners there's it has component filled boxes
that
say "Type 356 C1, amplifier 522-0395-003, there are four adjustment screws
in the center top and bottom, one side says line input gain, LSB, USB, the
other sidesays line output gain, LSB and USB. Has a variety of caps also on
board.
The wires were cuty to facilitate removal. Whatever it is, it's yours for 20.00

Also One Heath scope,# 10D-4540-31, series # 00511, as far as I can tell,
missing the cover, transistor# Q-207, and IC chip# 301, although the socket is
there.
Has nice appearing CRT tube still there, great to fix or for parts, 15.00
Shipping for both together should be 10.00 or less in USA,
about 5.00 if separated...
Thank you,
Joe Pratt, Tubecntral@aol.com

Gustavo:

You have the honor to have built the largest signal generators I have ever seen! Your Polarad FIM-B, a 1-12 GHz monster that needed 4 plug-ins to span the range, was such a behemoth that it had two fold-out foam cushioned steel handles on each side so that two guys wouldn't loose circulation in their fingers when they had to move it from bench to bench. It was about 24" wide by 24" high by 30" deep, and used another identical sized box for a power supply. The plug-ins were a marvel of mechanical complexity, with something like three cam-followers riding on circular ramps created by side-by-side rows of set screws. Now there was a design that didn't need no stinkin' synthesizers!

Ed

I have for sale a Hallicrafters SX-101 Mark 3. This one is a great example of Hallicraftersï¿½ first receiver produced to exclusively cover the Ham bands. Covers 160 thru 10 meters, 14 tubes, dual conversion, crystal calibrator, S-meter, selectable sideband, ANL, BFO, and Notch filter. This SX-101 MARK 3 is in beautiful cosmetic and operational condition, chassis is very clean. Less than normal top scratches, faceplate is beautiful. Tuning knob has two small chips in the outer rim, otherwise, front panel appearance is near perfect. Overall, I rate 9.5+. With original ownerï¿½s manual. This receiver is very heavy, approximately 75 pounds. Guaranteed not DOA, otherwise sold "as-is". No warranty implied.

This receiver is not for bid at eBay Auction, I am selling it direct. I am asking $275 for the receiver, but feel free to make an offer. To see several photos of the SX-101, please follow these links:

http://mh102.infi.net/~k3458/index.html/front3a.jpg

http://mh102.infi.net/~k3458/index.html/chas2a.jpg

http://mh102.infi.net/~k3458/index.html/close.jpg

Note: yellowing in photo along edge of faceplate is a camera problem, not actually on the receiver.

Please email me to make an offer.

Thank you,
David

A fine ad and a fair price, but do you REALLY mean "kc" for all of them?
I know "kc" is an archaic term, but some of those frequencies are pretty
strange.

For Sale: My parts collection for an 813 final amplifier consisting of
the Following:

2 each NIB RCA 813 tubes, serial numbers match the boxes
2 each Johnson ceramic tube sockets for 813s
1 each New 10volt at 10 amp CT fil xfmer, vertical shell mount
1 each 2 Pole 12 position Ceramic Band Switch Many KV insulation
like new removed from HV test set
1 each Jennings 500 Pf at 5Kv vacuum variable, 1/4 inch shaft, very
nice condx
and compact design
1 each 4 section closed space variable cap for loading in excellent
condition
approximately 1600 pf all sections in parallel
6 each 1/2 inch ceramic slug tuned coil forms for pi input network
GG
2 each 500 pf/20kv Cermic Door Knob coupling caps
1 each Alumitronics 195-1 plate tank assembly 80-10 meters, used but
styrene in
good shape. Will need added inductor for 160 meter and
will include
separate section of new coil stock for that band
2 each Matching panel meters, square design kind of like S line
meters only next
size up, 500 MA and 300 Ma or shunt to desired value
(1 ma basic movements)
1 each 54 Ufd/3500 volt Oil cap

1 assortment 3 amp/ 1kv diodes on ceramic terminal assemblies for
either a
full wave bridge or voltage doubler.
2. each KRP style relays, 12VDC coils, DPDT contacts (10 amps each)
with
mating flat mounting octal sockets with screw terminals

2 each Amperite 30 second thermal timer relays N/O 115VAC fil. NIB

2 each open frame relays for t/r switching, good insulation and modified
for RF
work, 12VDC coils

1 each Cloned BW-800 plate choke--not checked on WARC bands or 160

2 each SO-239 connectors

2 each N type chassis mount (if you prefer N)

2 each 1750 volt/270 MA ccs plate transformers with 115/220 primary with FWB and the oil cap noted the unit will send out around 2250 volts or more at 400 ma all day long to the 813s.

I'll include copies of 813 amplifier designs from various sources including input network design information for gg tuned circuits etc.

The metal work is your challenge. hi hi.

The package as noted $275 plus UPS ground on around 70 lbs from my zip 95827. take off $75 and about 50 lbs if you don't want the plate transformers and the oil cap. I want to keep the rest of the package together if possible.

tnx es 73

1217. FS: Murch UT-160M Transmatch antenna tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-24 00:00:00 UTC
From: w7ycn@aol.com
Message-ID: <1998082404483400.AAA29758@ladder01.news.aol.com>
Source record: 100249

Hi and thanks for reading. The tuner was part of a package deal and I have no need for it. It's a 2KW tuner with massive caps and a ceramic wound inductor with a tap at every turn. In-out/dummy load/ground switch and D.C Ma meter. Size is 12" wide, 5" high, and 15 1/2" deep. A few minor scratches on cabinet but perfect panel and in very good condition. Not really sure what this is worth but seems like it should be a good deal at $125 plus shipping from Olympia, WA.

WANTED ALIVE AND IN WORKING CONDITION
AN/UPX-6 CAVITY AMPLIFIERS. NO I DO NOT WANT THE 2C39 TUBES ONLY THE CAVITIES.

I know someone out ther in Radio or Swap land must have some of these units they have been kicking around the surplus yards for years. There maybe even some in the Garage or Attic or in a corner of your Ham Shack.

I'm building 1296 amplifiers and need these units for drivers. If you have any or know someone, or the whereabous of any of these units please let me know ASAP. My project is nearing the close and it's about ready for a 25 watt driver which a single cavity will do with 2 watts drive.

I desprately need some of these units so ask around and see what you can do, mabye you can make a little of money too.

Regards
Don W6PJJ

Why is this on the Boatanchors list??

Sure would be nice if we could all play by the rules here, as loosly as they can be interpreted. This is not the place for Yaecomwood gear unless it has tubes. Vintage tube gear and related accessories(coils, meters, crystals, mics, etc.).

I know, I don't administer the list, just putting in my simply two cents worth. ;)

1231. WTB: Collins 32V series transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-24 00:00:00 UTC
From: kk5fe@communique.net
Message-ID: <6rsgm5kbd1@nntp.gulfsouth.verio.net>
Source record: 100263

Hi All,

I'd like to purchase a 32V transmitter. Preferably the 32V-3, but wont pass up another. Would like it to be in good shape. Now the catch is I would like to pick this up, so driving distance will play a part. I don't want to trust UPS to handle such a heavy rig, and shipping would be high.
I am located about 35 miles north of New Orleans, La.

If you have one, please let me know condition and price.

Thanks,

Keith, KK5FE

Oh opppps. Read the ad carefully. He is SELLING that receiver, not auctioning it.
It WAS on auction, and he obviously didn't get his reserve, Despite the fact the photo link takes you the EBay auction the auction for that receiver closed last week with no bidders. Man plainly states for sale with a fixed price.

Pete

Bob Plumskey wrote in message <7083-35E193D6-14@newsd-153.iap.bryant.webtv.net>...
Hey, Honeycutt, kindly write this ad as "FA" not "FS" to indicate its an auction, not a straight sale.

If you are a regular on this group, you should have noticed thousands of words written in anger on this subject.

Thanks,

Bob, w6lac

1245. "Fixes" for SX-28 broken tuning shaft??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-24 00:00:00 UTC
From: CommQuart <commquart@erols.com>
Message-ID: <6rt4k1$3k4$1@winter.news.erols.com>
Source record: 100277

I've seen this one before. The tuning shaft on
the SX-28 is a coaxial affair and is easily damaged
by shipping or resting the RX on its front panel.
This usually causes the shaft to snap at the transistion
from 1/4" down to the smaller shaft diameter.

Has anyone devised a good fix for this problem?
I can use a shaft from an old volume pot and hide
a 1/4 to 1/4 coupler inside--but that defeats the
slip clutch that protects everything from forced over
travel.

Ideas? Anyone have a junker with a good shaft to
part out??

Pete

Message-ID: <35E35BEC.D840D43D@freewwweb.com>
Source record: 100139

Gentlemen,

I am alarmed by the fact that personal attacks are happening more and more often. Yesterday alone, I saw postings on 3 different incidents. This is a serious matter, which deserves serious consideration.

When you accuse a person of something on the Internet, even if you later retract your complaint, you cause that person irreparable harm. How is this? For every person who asks you if the accused should go on their "bad guy" list, there are several who have already done so. And these well-meaning people will tell their friends, they'll get on Swapage or QTH and post warnings about the accused, etc. (QTH even has a separate category just for this). So, when a person is accused of anything on the Net, it should only be for something really serious, or criminal. (Not, for example, over a difference in opinion). And even then, only after you have 1st contacted that person, confronted him, and given him a chance to defend himself. (Unless, of course, the person refuses to respond). Because once you're accused of anything on the Net, you're "guilty until proven innocent".

As one who has sold over the Net, I can say from hard learned experience that just because a person says that they want to buy your radio/whatever today, it doesn't mean that they'll still want it tomorrow, or the next day, or next week, etc. They could buy one from someone else, change their mind, etc. So if a seller asks you if you're still interested in what he's selling, he's just using common sense, and doing you the courtesy of not assuming that you haven't changed your mind. By no means is he calling you a liar by doing this.

If you have any kind of restrictions on your e-mail, or your phone, it is common sense to make the seller aware of this. (Suggestion: Find a neighbor, or a local friend, to whom your messages could be sent during your periods of restricted access). If you're going to be away for the weekend, or going on vacation, you need to make the seller aware of this. If the unaware seller is unable to contact you, and moves on to the next person, whose fault is it?

Lastly, the "too quick on the trigger" issue. This is a question for which there is no easy answer. If only 2 or 3 people 1st responded to the seller, he could afford to wait a day or two for each one to respond back. But what if 10, or 20, or even more responded?

(This is not at all uncommon, remember THOUSANDS of people
are reading these postings). Now, what is the seller going to do?
If he gives each person a day or to to respond back, it could take
many days or weeks. Is it reasonable to expect the seller to do this?

73,

Bruce Sugarberg, WA8TNC

Source record: 100196

Hi, I found a much cheaper printer that has the same High-resolution
LASER duplicator, so I am able to pass along the savings to you. IF YOU HAVE
ALREADY ORDERED and sent out your money for these, the you will get a rebate on
the difference in price, so this is fair to everybody. Thanks, the amended post
follows:

Hello, I have the following literature that is out of print,
and very hard to find. These are very high resolution LASER
monochromatic reprints of the rare originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices INCLUDE POSTAGE, in the
continental USA. Others by actual quote.
Thanks, and if you need tubes, visit our sister screename,
Tubecntral@aol.com

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2,069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"

price update for Dec. 6, 1946.Another excellently illustrated info source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951 25 pages crammed full of information IN DEPTH! Has everything you ever wanted or needed to know about running these tubes, a real nicely illustrated easy to understand manual, Price 10.00
Thanks for reading, if you have any questions or need to order, Please respond to my mailbox...
Thanks, Joe Pratt,
Tubelit@aol.com

Well, Don, sorry you are offended. It's the first time I ever used eBay.
You look at it as "bait and switch", I look at it as a courtesy to let
others know it is available. Guess the old saying "You can't please all
the people all the time" is true. :-)

Regards and 73,
Carter

You should still be able to get it from RL Drake. They have a page
with all the listings. All crystals only $10.00 a piece + shipping.

1286. buzzing power xfmr in Hallicrafters S-40B ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-25 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <6rul7l$35e$1@supernews.com>
Source record: 100210
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

The other day I fired up my Hallicrafters S-40B for the first time since I bought it a couple of years ago.

The radio works wonderfully, but I hear a distinct buzzing from the power transformer. This is not the usual tube radio hum. It's not terribly loud, but you can notice it if sitting close to the radio and playing it at lower volume.

I tested the voltages at the rectifier tube pins, and all are within 5% of the values given in the schematic. None of the transformer mounting screws is loose.

Does this just mean that something dried out inside and has begun to vibrate a little? Since the radio seems stable and reliable, I'm inclined to live with it unless someone tells me the buzz is a sign of imminent meltdown. I will recap the set during the next week or so.

Thanks!

Phil Nelson

Pete,

On my screen, the "FS" ad appears three times with three different dates. Upon re-reading, I find the last paragraph of the third ad does indeed say, as you note, NOT for auction but straight sale.

Sorry, but as Bill would say, it was that dirty Independent Counsel that made me do it !!!!

[Here I should also confess my extreme predjudice against "auctioneers" who head ads in a misleading manner.]

Tnx es 73,

Bob, w6lac

Carter -

Please be clear about your listing being 'For Auction', not 'For Sale'. For sale implies you are asking a price and anyone is welcome to purchase it for that price. For auction implies pitting folks against one another to extract the maiximum amount possible.

Most folks on the newsgroup post as 'F.A.' if their item is actually being auctioned, so those who aren't interested in EBay(or making this a free advertising sight fo them)can just delete the message without reading and move on. If you post it 'F.S.' you should be ready to deal one on one with whomever responds to sell the radio, not try to send them to another sight somewhere else for an auction.

Hope this makes sense to you and helps out.

73, Todd, KA1KAQ

It's probably just a loose lamination vibrating. The varnish can become brittle with time and heat, and the end lams can come loose. While you have it out of the case recapping, use a wood wedge and press on the core stack from the top, midway along each side, and then wedge up from the chassis along the bottom edges. This should find where the loose one is. Inject some adhesive such as epoxy into the gap to lock the lamination from vibrating.

Try tightning the four corner bolts that hold the laminations and shield together. These are also the mounting bolts. Have had cases where one or more of the nuts had worked loose or a lock washer had relaxed a bit.

The SX-115 and SX-88 are priced like they are both made out of
gold, but other than that they aren't alike at all !

Working from a potentially faulty memory:
The SX-88 is a conventional double conversion rcvr
with tuned HF oscillator to give a fixed first IF (and conventional
bandspread via a padding cap in parallel with main tuning cap).

The SX-115 is more like a Drake or S-line arrangement with fixed HF
oscillator for the various bands to produce a variable first
IF and then tuning is via a master oscillator to give
a fixed second IF.

The SX-115 is about 70 lbs lighter than the SX-88 too!
The SX-115 construction resembles the S-line as well.

I think the SX-115 is also in the hernia producing group of boat anchors, maybe a tad lighter than the SX-88, but still a lot of good old Hallicrafters sheet steel. Actually if you want to compare the SX-115 to a later radio, the SX-117 is perhaps the closest design and is actually quite close and probably performs as well and is a darn sight lighter. The SX-117 is also quite a bit cheaper on the market. But it is not a Purrrrrty as the SX-115.

1312. Re: SX-88 over $1K ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-25 00:00:00 UTC
From: CommQuart <commquart@erols.com>
Message-ID: <6rvj27$pv3$1@winter.news.erols.com>
Source record: 100236

For a real "boatanchor, the SX101 would be
a closer match to the SX88, except for its
ham band only coverage. Can anyone answer
if the tuning capacitor cover assembly
(shown in the SX88 photos)
is indeed identical to the one used in the SX-28A
models??

Pete

Stu, I have what I think to be a BC 221 with power supply. The book says type CRR-74028. I also have 2 SX 25. One is just a parts rig, but isn't missing anything. The case is rough. I'll take $60.00 plus shipping, and make an offer for the BC 221. Thanks , James

Todd,

I've a breadboard style 6L6 transmitter construction "article" on my
National Radio web page. Go to http://www.io.com/~nielw/index.htm and
follow the link to "Constructing a One Tube Transmitter". Another
possibility is old issues of "Electric Radio" magazine.

What does it do? Depends if its the Monica Model. If so, you have found something of note..

If not, it probably is a low power rig (a la Johnson Ranger), used to drive a California Kilowatt. Too bad.

I have a bunch of ARRL handbooks I'd like to sell, here's a list with prices:

1934 - covers worn at corners but really pretty nice. First few pages have minor edge fray. Pages clean and v.g. - $45.00

1936 - HARD COVER. Some corner wear of covers, but overall v.g. $45.00

1937 - covers poor and completely off. Pages clean and very good. $20.00

1942 - Special Defense Edition. Covern worn on spine, binding good, pages clean. $20.00

1943 - Covers worn, pages excellent, binding starting to loosen a little. $20.00

1945 - Front cover torn in lower left (missing 2" piece). Pages good, some starting to come loose. $15.00

1946 - Back cover and spine cover gone, front very worn. Spine repaired with book repair tape. All pages there and clean in v.g. condition. $15.00

1947 - Cover on spine very worn at corners. Pages tight and very good. $20.00

1950 - Spine repaired with tape, covers worn. Pages all intact and v.g. $15.00

1951 - Tape repair on spine cover, but covers very good. Pages very good, but about 50 of them look water stained in one corner. $20.00

1952 - Front cover has what looks like sun discoloration. Very good condition. $15.00

1953 - Covers worn at corners and edges, pages tight and excellent. $15.00

1954 - Corners worn, pages clean. Small piece gone from front cover corner. Binding good.$15.00

1956 - Some cover wear and wrinkles. Pages excellent $15.00

1957 - Like new. Some small stains on outside edge of pages, but can only see with book closed. $20.00

1958 - Moderate cover staining, especially on spine. Pages excellent. $15.00

1961 - Covers stained and coming loose. Looks like one corner of whole book has been wet, but still very usable. $5.00

1962 - Some slight corner wear on covers - excellent overall. $10.00

1969 - Covers worn, spine has book tape, pages v.g. and clean. $5.00

1972 - Very good condition. $5.00

1974 - Very good condition, antenna diagram drawn in ink on back cover. $5.00

1978 - Some cover wear, very good. $5.00

1979 - Very good condition. $5.00

1980 - Some cover wear, otherwise very good. $5.00

1985 - Very good condition. $5.00

All prices plus shipping from zip 93401
Thanks.

Hello Group,
I have an Apache TX-1 that I'm ready to start working on.....the
question is what to do?
The Apache seems to be functional, but dirty , Do I just remove all the
front panel parts and clean? Re-Check the alignment? What about the old if
it works, don't fix it?
I'm considering using the Apache along with a national NC300 for my "new"
station. The Kenwood TS450 will sit discretely off in the corner.....

Source record: 100153

Hi Guys;
I have for sale a Factory Wired WRL Globe Scout model 680.
I have a nice copy of the manual, the front panel is excellent, correct knobs, etc.
The cabinet has a few normal marks, but no dents or real bad areas, quite presentable. NO Corrosion on the chassis! The wiring is excellent of course, I had a kit one and believe me, theres a big difference in the wiring. The S/N ends in "W", which means its a factory wired one.
The Scout is putting out power and all seems normal. This does'nt mean that a little TLC is not in order. Maybe a cap here, a resistor there, you know!
Price is $99.99 Plus shipping from Long Island, NY 11758.

Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

I just acquired from an Ebay auction a "transistor" AM radio that uses
submini tubes in its RF and IF stages and transistors
for the audio output stages. Made by Emerson, model 838. See pictures
of it (inside and out) at
http://www.geocities.com/CapeCanaveral/9178/radios/e.html
about halfway down the page.
(No, not for sale).

This radio is the only consumer product I've seen that used sub-mini tubes.
Anyone know of others? (I know hearing aids used submini tubes in cigarette
pack sized boxes, but any radios?).

Hi,

I picked up and old key at a local antique shop. It is a Speedex straight key on a plastic (could be bakelite) base. It has a shorting bar. Looks like a bottom-of-the line cheapie key. Color of the base, knob, shoriting bar knob is brown.

Worth anything?

From: Dave Werner <w2qa@execpc.com>
Message-ID: <6s0uo4$15t@newsops.execpc.com>
Source record: 100161

As clean as you will find!

With original manual, and still in the original half rack-width case. (These beautiful cases are often "missing" when GSB-1s come up for sale.)

If you have an GPR-90, 92, R-390, 392, or any other 455Khz IF receiver from the AM era, the TMC GSB-1 Sideband adapter will vastly improve your SSB capability (and will look great next to your rig!)

$150 plus shipping

Thanks,

Dave, W2QA

P.S. I also have a Panadaptor for sale....

This is one of the things I find wrong with eBay. It is not simple to communicate with the seller (in my opinion), so misunderstandings can occur. If one potential buyer learns something surprising, the information does not get easily spread as in the newsgroups. There are no public messages on eBay.

While the seller says to contact him for a crystal list, I think it is misleading to say this is a CP-1, which has 126 crystals when complete.

This is really the plastic pouch from a CP-1 with 96 asssorted crystals and, if you want to know what is missing, you had better contact the seller. It depends on the buyer knowing what the "96 crystal" description means. This is like trying to sell a 75S-3C receiver without disclosing that the cabinet and some of the IF cans are missing - just "contact me for full description". These sort of things would be publicly challenged in the newgroups - not a one-on-one exchange between the seller and one buyer who was smart enough to ask.

I noticed the bid is already at $123.00, which is more than I would want to pay for a complete CP-1 - but maybe someone out there really needs 96 assorted crystals more than I would.

Caveat Emptor - Let the Buyer Beware!

Todd,

I can think of a few single-tube wood-based transmitters, using those tubes, from ARRL publications. Pre-war (c. 1938-1941) there were one or two 6L6 rigs. After the war there was one that used a 6V6 (or 6F6 or 6L6) that appeared around 1947, and another using a 6AG7 that appeared around 1951.

Mike, KK6GM

1352. National speaker ID

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-26 00:00:00 UTC
From: nick@cs.unc.edu
Message-ID: <6s17gdncu1@altair.cs.unc.edu>
Source record: 100170

There is often confusion over the National speakers that were sold as
matches for the NC-300, 303, 400, 109, 188 receivers. I think I have
got this figured out, from old ads, and from speakers I have seen.
I maintain a page of vintage receiver-speaker info at
http://www.cs.unc.edu/~nick/speakers.htm

Here's a summary of the late model National situation...

NC-300TS goes with the NC-300. Has a National logo in lower right of
grille cloth and a lightning bolt in upper left. Two-tone paint
line is about 25% of the way down on the sides. No chrome strips
on the side. Early models were smooth/glossy (just like the NC-300 front
panel) and later ones were wrinkle finish. You can see a photo on
the cover of the Sept. 1998 CQ magazine.

NTS-1 goes with the NC-188 and NC-109. Looks similar to the NC-300TS but
lacks the lightning bolt. The paint line is about 40% of the way down
the sides. The grille cloth is also somewhat different from the NC-300TS.
You can see one at:
http://www.cs.unc.edu/~nick/spkrs/nat_nts1.jpg

NTS-2 goes with the NC-303 and NC-400. Paint shade is darker to match
NC-303 trim. Also has chrome strips at the two-tone paint line which
is about 25% of the way down the sides. There is a script logo in the
center only. Grille cloth is also different from other speaker.
You can see one at:
http://www.io.com/~nielw/nat50/nat50_12.htm

There were matching converter cabinets for the NC-300TS and NTS-2,
but not for the NTS-1.

So there you have it - if you have some other info or photos I'd really
appreciate it. I think I have got this right as I have looked at a lot
of ads and a lot of speakers, including one of each in my shack. (and
having said that, I am sure to be proved wrong pretty quickly!)

The model railroad shops have decals for alphabets-and "settling fluid"
which softens the decal stock so they settle over details. Test it first
of your paint, though.

I have a 8 inch light grey wrinkle steel speaker cabinet that perhaps someone could ID for me.

It has three vertical bars in the center with a small red NC logo attached to the center bar.
The grill cloth is 'kindova gold color' and the cabinet has chrome trim at the bottom on the sides
and part way on each side of the front. The feet are felt. Looks like the speaker might be original
but someone has added a high Z tapped matching transformer.

I looked at Nick's page but didn't see anything that resembled it. Any suggestions?

Hi Marc OM,

Why are you concerned about what others might suggest you do? You are
the owner, so use the rig! If and when you become aware of something
you do not like, then it will be obvious to you what you then need to
do. No need to rely on others (whose opinions, including mine, will, of
course, all vary, so you would still be unsure anyway).
Just a thought.. FWIW.
73 and enjoy!

But the Datak dry transfers come with complete electronic related words so
you don't have to try and line up one letter at a time. Much easier! Someone
said that dry transfers won't work on wrinkle finish but I did it again last
night without a hitch.

1359. Re: How to letter a wrinkle-finish panel?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-26 00:00:00 UTC
From: jangus@netcom.com
Message-ID: <jangusEyBB0u.Bwr@netcom.com>
Source record: 100177
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

Some thoughts on wrinkle finish and lettering.

Back in the early 70's I used to buy Gray and Black wrinkle paint from
General Cement at the local store. Put on one coat, let it dry for
about 10-15 minutes, spray on a second coat. I'd put it in the oven
in the kitchen and bake it at 250-350 for an hour or so. Nice tight
even wrinkles. I suspect some paints will do this even though it doesn't
say so on the can. :-) (As mentioned in a previous article)

For lettering, I used Datak dri-transfer letters. Use an orange wood
stick (available in most drug stores in the fingernail stuff section)
to transfer the letters, then use the tissue paper that comes with them
to lay over the lettering and burnish it into the paint/panel. They
stay where you put them then.

As for Dymo labels, heh, I still use them when I'm in a hurry. Or
out in the field. (Network ID numbers, Telco etc.) Besides, Fair
Radio sales has been using them since the beginning of time to lable
thier catalog. (As an aside, does anyone know how to make TrueType
fonts? I'l like to come up with a set of "Dymo Font".)

Another item I picked up at a Swap meet, was a Kroy lettering machine.
Not really good front panels, but works great for letting tool boxes
parts cabinets etc. (Unless you're really lazy like I am and use
Avery stick ons. Oh, and for parts cabinets, use the perminent file
folder lables, the "removable" ones fall off after a few years.)

Lastly, while you're in the "not really sure if it works" mode, use
a sharpie felt pen on aluminum and painted aluminum chassis. Semi-neat
and it washes off with lighter fluid after you figure out what you
really want to say on the panels.

Since I was inundated with requests for more info, I thought I would post it here. Was posting holding my 1-month old and typing one handed...

The rig was my grandfather's. It was fully functional the last time it was used. I don't have an antenna up or a dummy load to connect it to, but the receiving end still works. I also don't know what, if any, optianal filters it may have.

The cases of both have a little paint chipped away at the edges and a few scratches, but I would still consider them in good condition. My grandfather did not smoke, but I don't know about before him (he bought the rig at a ham fest). I don't smell any smoke and there is no film covering either unit.

As with all my grandfather's gear, he marked each in one place with his initial and a 4 digit number - with a permanent marker as well as a scribe. They nearly overlay each other and are about 1/4 tall by an inch long.

Here's something that might be of unusual interest to some. Best offer for a manual marked: Preliminary Instructions for Radio Set SCR-274-N. Manufactured by Western Electric Company. Published by Authority of the Chief Signal Officer. RESTRICTED. Order No. 6375-NY-41. Missing schematics of the receiver and transmitter but these can be copied from any number of sources. Manual includes photo's, drawings and original aircraft installation details.

On the last Idea of using a sharpie permanent marker to temporarily label aluminum panels : BE carefull. It usually works well, but in a few cases I was never able to completely remove the stuff, even with lacquer thinner, MEK acetone and several other solvents. I suspect It was a result of the specific surface finish or maybe alloy contents or something. Ive used this technique a zillion times and only had the problem a few times, but if you do, youll REMEMBER it!

The buzzing transformer has been fixed! Thanks to everyone for the advice.

I was too lazy to take the transformer out, so I decided against the whack-with-hammer cure, although its simplicity is appealing. Reminds me of the cure for starter problems (stuck solenoid?) in old Volkswagen beetles, which is to crawl underneath and give the starter a mighty whack.

I was able to fix the problem without pulling the transformer. I just loosened the mounting bolts and worked with it loosely attached. When all four corner bolts were removed, the looseness of many laminations was apparent. I brushed varnish on all the lamination edges, let it seep in for a minute, then brushed on some more.

I had also noticed two unused bolt channels on the long sides of the transformer. I got two bolts of just the right size and installed them with locking nuts to help clamp the plates from the middle of the long sides. (The new bolts don't go through the chassis; they are installed upside-down with the heads sitting between the chassis and the bottom of the transformer.)

Then I tightened down all the bolts very hard. In a quick test, the buzzing was gone! I let the transformer bake under a little lamp overnight, to dry the varnish thoroughly.

I'm about halfway finished recapping the S-40B, which will be a lot of fun to use. It's older and simpler than my other boatanchors (which include an SX-122 and some big Hammarlunds), but its performance stands up pretty well against them. The only thing I really miss is a tuning meter. Maybe it's time to find that old magazine article about connecting an outboard magic tuning eye to old radios.

Cheers.

Phil

I need some help for a friend. He just picked up a FT-73r, and wanted to mod
it so that he could listen to his businesses freq but not x-mit on it. However, the
radio dosen't work much outside of it's designed limits. RX drops off pretty fast. He
says that there's a pot inside that'll widen the radio's RX and TX up. But without
the service manual, figuring out which it is isn't easy. Can anyone help him out?
He dosen't have internet access, nor even a home computer, so I'll relay
messages for him.
P.S., if you think he's doing this to mess around with other freqs, he's most
definately not. He's 67, and he's a Vet who strongly believes in not breaking the
law. I've known him long anough to know that he's straignt. Besides, as a precaution,
he's going to set the Tx freq to something so far out of band that TX power will be 0
watts. With this ht, that's easy.

1380. Re: 811A' s ON 6 METERS ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-27 00:00:00 UTC
From: Jack Taylor <n7oo@theriver.com>
Message-ID: <35E597B7.6B753743@theriver.com>
Source record: 100048

According to the spec sheets, 811A's are good to 60 MHz, however whether that also applies to foreign made 811A's is open to question. Seems to me if 100 watts output on six is the goal, there are other more economical means to reach it unless you already have all of the parts on hand. If you don't have the parts, I'd be tempted to look around for an existing used 6M amp. Otherwise if you *really* want to roll your own, check out designs based on dual tetrodes, such as the once popular 829B or 5894. These are good to 200 MHz and often can be found fairly economically at swap meets. For example, a 12V filament version of the 5894 as well as amplifier parts, may be available for next to nothing in old 100 watt Motorola Motrac mobile radios. While a Motrac in the VHF range would provide tube and parts, a 49 MHz Motrac with exception of an AC power supply, would yield 'the whole banana' :-)

Todd - Check out just about any HOW TO BECOME A RADIO AMATEUR an ARRL publication of the 40s, 50s, or 60s. It has a very nice one tube 6L6 series crystal ocscillator rig that was the first for maybe 30% of the amateurs of today.

Also, just about any ARRL HANDBOOK of the same era has some very simple small rigs as the first articles in the transmitting section. Check any library.

Good Luck and Enjoy

Hello All,

I am posting this for a friend. He wants to know how to connect his
Collins 30S1 linear Amplifier (stand up model) to his Kenwood TS-850.
Seems to me he couldn't do it because the Kenwood ALC would not drive
it. Any ideas? Also wants to know where he can get parts for the 30S1.

Thanks,
John Strunck III

Good Evening...

My Grandfather founded and operated Northern Radio Company, NY, NY
and a Canadian division, N.R. Mfg. Co., Ltd. Ottawa.

My father also worked there (VP) until Harris (Intertype) took control
and absorbed in 1972 or so.

They manufactered wireless telecommunication equipment (teletype), esp.
for U.S.Gov't, etc.

I have a single item available for sale....READ ON...
==========

NORTHERN RADIO Type 159 Model 1 Radio Receiver.....

A HAMMARLUND SP-600J Receiver, "...specially modified so it may be used
in dual or triple diversity receiving systems. It will receive any one
of the commonly used modulations, such as frequency shift, CW or Voice
(telephone) communications....can be used for radio teleprinter
reception, undulator tape recording and program reception, Multiplex
teleprinter circuits, or for remote service where the intelligence is to
be transmitted via land line or UHF link."

Freq. Range: 540 kilocycles to 54.0 megacycles in 6 bands.
Output: 2.5 watts undistorted
Sensitivity: 2.3 microvolts or better, signal to noise 10:1

Northern Radio Company Type 159 / Model 1 / Serial No 1147

Hammarlund Serial Number 54716519
==========

I guess that's the most pertinent info. If you need more, e-mail me
privately and I will collect and reply.

I do not know the exact age, perhaps 1963 (date on instruction book).
It may be newer (circa 1970), as it was in my grandfathers lab at home
prior to his retirement and death.

Unit is in GREAT condition, no cabinet - was rack mounted with other
Northern Radio equipment. Has not been used recently - boxed for more
than 20 years (not orig.).

ASKING $600 firm, plus shipping (recommend FedEx).

I'll be up-front: I will only accept Certified Bank Check, pre-paid.
I'll be happy to negotiate Sale Agreement via fax, at your request.

We can chat or chew, however, I expect this to go FAST....

Any further history about N.R.C. would be appreciated...

I appreciate your interest, too, (and reading all this)!

I've never given it much thought until now, but I had the use of one for years that I think had the modification.

There were jacks on the back for the local oscillator(s) and BFO. Normally, these were outputs. But there was also a switch on the front, and if you turned that, the jacks would act as inputs. So if you ran cables between the jacks of two of the Super Pro's, and turned the switch on one, they would both use the oscillators of the one receiver.

There was also an article in QST about improvements to the SP-600, in 1969 or '70, and it showed a picture of a Northern Radio Company unit that was a whole set of oscillators, more stable than that built into the Super Pro, which would plug into those jacks for more stable operation. I think it also had a better dial, which would have been a good thing, since the SP-600 was somewhat lacking in the dial department. But it did have a great fly-wheel.

Hi Al,

I thought I'd send a quick note in reply to your post.

My reason for listing the crystals as I did was for purposes of identification, not to mislead a potential buyer. I surmised that it would be much easier for someone searching for Collins accessories to find these crystals by listing them as a "CP-1 with 96 crystals" than to list them as "A grey vinyl pack with 96 crystals for radios". Since I intended to sell them for use with an S-line, I wanted to make the item easy to find. It also seemed logical to offer the listing via e-mail, instead of putting the entire list on my item page, as many people would want to print the listing and review it at their leisure.

>I noticed the bid is already at $123.00, which is more than I would want
>to pay for a complete CP-1 - but maybe someone out there really needs 96
>assorted crystals more than I would.

This must be the case, as I have had 14 bids, at last count, for the crystals. I must add that this is why I like auctions, both the ones I attend in person and those I participate in via eBay; the buyers dictate the value of the item(s) being sold, not the sellers. In this case, I think 1.25 per S-line crystal makes for a pretty good buy, and I would guess that the buyer agrees.

Thanks for the note.

73,

Tony N8SNC

Oh gee, look everyone, I am being threatened now !!! I'm just a
shakin' in my boots... Whatcha gonna do, pop me in the chops ? Still
with the phony email address I see. Ahh well...
REAL hams don't attend hamfests. They stay home and work contests and
DX on the weekends.

Gosh, According to the email address on this posting and Ebay...you
are the seller, but you just "found" it ?
Good job you suckered me into checking it out for you....

Once you learn what it is will you please add the information to the
items discription so us bidders can be more informed also !

Good luck in the auction !

>When you accuse a person of something on the Internet,
even if you later retract your complaint, you cause that
person irreparable harm.<

One problem (or blessing, depending upon your view) is that "irreparable harm" is a legal standard that, as far as we know, has yet to be met by anyone in USENET - notwithstanding wheelbarrow loads of manure dumped over the years. Until/unless this occurs, unmoderated USENET is largely an anything-goes entertainment place - with all the good & bad that goes with the territory, and where the only truly serious people are queer.

It may likewise be argueable that "thousands" read these posts - this NG has gone in/out of the toilet a number of times in it's short life, and it's readership is more likely in the dozens accordingly.

The "fast trigger" syndrome also goes with the territory - the whole addictive psychology of the 'net has the myth of instant gratification as one of its pillars. That said, there are still far more fine people to trade with then otherwise, and the cumulative experience tends to show that moralizing, lecturing & otherwise trying to "fix the problem", however insightful & well-intended, is counterproductive except for expending additional bandwidth. Don't curse the darkness - it brings even more. People like the illusion of independence that the 'net provides (while they serve their globalist masters everytime they log on), and resent being controlled by others - however reasonable.

I agree with you , Tony, that the buyers establish the "fair market price" at auction. I just don't believe that all the buyers understand what they will be getting until they see your incomplete CP-1.

I think the description should have used the word "incomplete" to describe the CP-1. I don't believe that most people understand that "96 crystals" means "incomplete. Using a model number - like CP-1 - indicates to me that the item is complete.

While it is easy to rationlize the price on a "cost per crystal" basis, I think the fact that a "complete" CP-1 can be bought for less than buyers are bidding for yours indicates to me that they don't all understand what they will be getting. I have a lot of crystals that I will never use - I can't rationalize their uselessness on a "cost per crystal" basis.

If your partial CP-1 is missing any ham band crystals (including the WARC bands), then the rest fall into the worthless category and can't carry the same cost justification as the useful ones.

Good luck. I hope your final buyer is happy with his purchase.

Bill, I don't thik 811As are the answer for 6 meters. They will
probably make better self-oscillators at 50 MHz. If you have access to
any of the older ARRL handbooks, I think you will find some decent
designs there for amps using tubes that are rated to operate at 50 MHz
and above.

That's one of the newly proposed licensing classes with the requirement
that all applicants for the class must be small, blue people. Oops, no,
those are Smurfs! If a person is a "smuck" and practices "smucking" is
he/she considered a Smucker? Hmmm...no that's the family who makes all
those jellies and jams. Boy, I'm really confused now...guess I'm just
one of those ignorant 73s smucks!!

I have for sale a Drake model 2NT Transmitter. It is in very good condition, although there is a little bit of overspray from a blue spray bomb on a corner of the panel (could be removed with some thinner and patience). The chassis has some of the usual discoloration of the copper finish. Operating condition unknown. Price $75., including shipping.

Source record: 99943

I used a 3A5 and built a regen receiver from a article from last years CQ Mag. It was called the Tabasco Radio. It worked really well. Spent a whole $8 - tube and all. Used a breadpan from Wallmart ($0.88) as chassis. Powered by 2 D cells for filament and 3 9V batt's for B+. Always wanted to build a 3A5 transmitter to match it. Got the PE article but no time... (typical...)

Here is Uncle Bry's site with more projects:

http://www.mnsinc.com/bry/hamfiles.htm

Building with tubes is fun and easy...try it!

What's all this brew-ha-ha about 1800-dollar SX-88's on eBay? Come on fella's...if you can't beat 'em...join 'em.

What are we doing listing our stuff on this Newsgroup? We should be at the auction sites with the rest of the crowd getting big bucks for "strong" tested-used tubes and broken transistor radios found at rummage sales! I could attach a few prime adjectives like "rare", "beautiful", "top-of-
the-line" and other eBayisms to any of my garage queens and get big bucks for it!!

$1,800 SX-88's??? Not a big deal.

Pat, WB9GKZ/WPE9JRL

>Hello Group,
> I have an Apache TX-1 that I'm ready to start working on.....the
>question is what to do?

Start with mild soap and water and an old toothbrush. For resistant crud, work with Fantastic or ammonia (use spray bottles and stay away from painted surfaces). I like to remove the knobs and wash them separately, and I use a vacume-cleaner with the hose hooked up backwards as a pressurized air source to dry the cleaned parts. BTW, I reserve a vacume hose for this purpose, to avoid a cloud of dust when I hook it up to the vacume. :-)

> The Apache seems to be functional, but dirty , Do I just remove all the
>front panel parts and clean? Re-Check the alignment? What about the old if
>it works, don't fix it?

Cleaning works wonders. I have found that re-alignment is not all that necessary. However, paper capacitors and resistors have not held up as well with time. If the set works, use it, but be sensitive to signs of distortion and birdies. Both can be cured by replacing paper capacitors. Check resistors as you go, you can easily find a half-dozen or so that have drifted more than 20% from their marked value or have opened up altogether.

> I'm considering using the Apache along with a national NC300 for my
"new"
>station. The Kenwood TS450 will sit discretely off in the corner.....

Oh, I still use mine, but the old equipment is on most of the time.

I am beginning to wonder just how stable and effective paper capacitors ever were. I know newly purchased tube equipment seemed to work much better than gear that had been around a year or better. People used to retube sets as a first effort to repair them - but I haven't found all that many bad tubes in the many sets I have now restored. I just wonder whether paper capacitors really didn't ever work very well, whether they started their leakage game much earlier, or opened up or.. ??

One of these days I would like to replace all the caps and resistors in a set to see how it performs. Surely there are many who have already been through this process. Any comments?

It has nothing to do with performance. As a metter of fact, the SX-88 is a mediocre receiver. Your HQ-170 or SX-101 will do a better job, easily. The only reason they are so expensive is that they are rare....period! And as with most "rare" collectibles, that's all it takes.

Bill

I restore vintage radios from the early 30s and 40s. I rarely find any
paper capacitors that don't exhibit some amount of leakage. If I am
going to keep the radio and use it, I always replace all electrolytics,
and use new mylars to replace the old wax caps. Even in boatanchors,
a wax cap with a few megohms leakage used for coupling between the
first AF and audio PA can wreck havoc with the power supply current,
and shorten the life of the audio output tube. As you suggested, I check
all
resistors for value, and visible signs of overheating.

I rarely find defective tubes, despite what most people believe, as being
the
problems in vintage sets.

regards

Peter

AEROTRON RECEIVER NEEDED

I am in need of an Aerotron 60BR1 Mpac VHF Base Station
Receiver, 132-174 Mhz to use as a test fixture and back up
receiver for two of our local repeaters. I would like to have
the complete receiver but I would settle for the receiver case
with the master interconnect assembly.

You can email me at omega@worldnet.att.net or you call me toll free at
1-888-798-7373
week days or collect in the evenings at 1-919-231-2829.

1458. FS...Hallicrafters SX-101 MARK 3 Ham Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-28 00:00:00 UTC
From: DA Honeycutt <k3458@leo.infi.net>
Message-ID: <35E74E0D.70E0674E@leo.infi.net>
Source record: 99964
Cross-posted to: rec.radio.amateur.boatanchors,rec.audio.tubes,rec.antiques.radio+phono,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap

I have for sale a Hallicrafters SX-101 Mark 3. This one is a great example of Hallicraftersï¿½ first receiver produced to exclusively cover the Ham bands. Covers 160 thru 10 meters, 14 tubes, dual conversion, crystal calibrator, S-meter, selectable sideband, ANL, BFO, and Notch filter. This SX-101 MARK 3 is in beautiful cosmetic and operational condition, chassis is very clean. Less than normal top scratches, faceplate is beautiful. Tuning knob has two small chips in the outer rim, otherwise, front panel appearance is near perfect. Overall, I rate 9.5+. With original ownerï¿½s manual. This receiver is very heavy, approximately 75 pounds. Guaranteed not DOA, otherwise sold "as-is". No warranty implied.

This receiver is not for bid at eBay Auction, I am selling it direct. I

am asking $275 for the receiver, but feel free to make an offer. To see

several photos of the SX-101, please follow these links:

http://mh102.infi.net/~k3458/index.html/front3a.jpg

http://mh102.infi.net/~k3458/index.html/chas2a.jpg

http://mh102.infi.net/~k3458/index.html/close.jpg

Note: yellowing in photo along edge of faceplate is a camera problem, not actually on the receiver.

Please email me to make an offer.

Thank you,
David

Here's a list of a few things folks on this group might have an interest in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Dynaco FM-3 FM tuner. Excellent condition with VERY bright eye tube. Works great! $100

2.) Lambda model 50 regulated power supply. 0-500 VDC @ 500mA Also has bias and filament supplies. $150

3.) B+K model 747 Dyna-Jet tube tester. Mutual conductance type. Excellent condition. $125

4.) Military test socket adapter set MX-1258U. Provides test points for all tube types 4, 5, 6, 7pin, octal, loctal, 7 and 9 pin miniature. In original case. $40

5.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges. Good to 400 MHz. No slugs needed! $125

6.) Heathkit OP-1 professional oscilloscope. One of the best tube scopes heath ever made. MINT condition. (Unit was assembled this year!) 6 MHz bandwidth. 5" CRT $75

7.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable current limiting. Volt and Amp meters. Good condition. $200

8.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm outputs and level meter. $150

9.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to 3 V output (+20 dBM) into 50 ohms $150

10.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM modulation. $150

11.) Racal/Dana 1994 universal counter. measures frequency, time, period, etc. Up to 160 MHz. Dual channel. $125

12.) Hitachi VK-C350 color CCD video camera. Has S-Video and NTSC outputs. Can be genlocked. Professional quality unit. With Zoom lens. $100

13.) 6 foot equipment rack. Gray hammertone. Has RCA logo on it. PICK UP ONLY! $25

14.) Box of used, tested tubes. No useless TV types. Mostly pulls from test equipment and industrial gear. 6 and 12 volt types, lots of Industrial/military types. Some audio types. Approximately 400 pieces total. Prefer pick up. $200

15.) Heathkit GC-1000 Most Accurate Clock. Good working condition. With RS-232 accessory. $125

That's it for now. Thanks Again!

73,
Bob Weiss N2IXK

Hello John:

The simple way to do it is simply to ignore the ALC line connection, but be aware of not driving the amplifier too hard. It will work just fine. I have a 30S-1, and while I use it with my S-Line exclusively now, I have driven it with the Kenwood TS-830 for a few weeks with good results. Some on-air testing will quickly show where the overdive point is...in other words, do it manually rather than automatically!

From: ljrockford@aol.com
Message-ID: <1998082804403800.AAA08941@ladder03.news.aol.com>
Source record: 100075

Just in case you haven't, it is because there is no such thing as 73s. The term "73" means best regards. Therefore, "73s" means best regardses! By using the terms "73s", "73rds" or "73's" you are showing your ignorance. I know that some of you feel it is correct to say "73s" to a group. But, I submit that such usage probably gave root to the use of the incorrect plural form in the first place. So, just say "73 to all" - it really isn't that difficult to use these terms correctly!!

Thus, the reason "73 Magazine" was so named is because "73" is the correct form of the term and even Wayne Green knew that way back when . . .

Now, while I am on the subject, what the f--- is a "guide wire" or a "guyed wire"???? Since both are incorrect, I don't have any idea how to spell it/them! Additionally, how do you think this got started? It's kinda like using a term that was popular (among those who were just ignorant enough to use it) back in the Eighties - "satellite disk." By definition, a disk is flat not parabolic. Kinda hard to focus something when the focal length is infinite!!! By the way, you support (or guy) a tower with guy wires . . . not guide or guyed wires.

The point of all this is to demonstrate how our hobby has been bastardized by a bunch of ignorant smucks. I want to take it back. From this day forward I will correct anyone I see or hear using incorrect versions of "73" - I will do so politely but firmly. Will you do the same?

73,

LJR

For that much money I could get a real nice S-line, or a Drake 4B *and*
4C line (maybe a TR-6 as well)! Someone please explain what electrically
makes the SX-88 worth this kind of money. I suspect that it is just
rarity that inflates prices like this, not performance or design
aesthetics.

While on this topic, what are "smucks" ? Perhaps you should take some of your own advice. I believe the correct term is schmucks.

I've found an old Hickock television tester (model 530 or 560? can't remember) at a garage sale for a couple of bucks. Big, gray, small CRT in the middle. Didn't pay much attention to it, as he had lots of goodies, but then I remembered Hickock stuff was pretty good..... Does this thing have any value to anybody out there? I might just go get it if it's worth the bother....

[rest deleted]

There sure is; the usage "73s" has been common for at least 70 years -- as have pop-grammarian responses to it like yours. It came to be through a process allied to "back formation," which, as Merriam-Webster's Ninth (and, I suppose, Tenth) New Collegiate defines it, results in "a word formed by subtraction of a real or supposed affix from an already existing longer word (as *burgle* from *burglar*). See the same dictionary for a discussion of the plural *kudos*, which came about in the same way.

From: ross@hypertools.com
Message-ID: <35e75161.53182191@news.willapabay.org>
Source record: 99973

BAfolks -

I've got two large long spline cables and want to trade them for a pair of smaller 'Command Set' size cables.

My two cables are each 18 feet in length, and fit either the ARB or the RU series receivers, or a Bendix nav receiver, or who knows what else...
One cable is nice and clean and the other shows a bit of rust. Both work freely (no caked/hardened grease) and both have good threads & splines.

Also have a Bendix 0-360 control box to fit the large cables, an MN 52 H

I'd like to find a pair of 6 foot Command Set cables, or may trade for other interesting Command Set stuff.

thanks and 73

item #27642396. late WE [s/n 46xxx] with RE pto subchassis--a crossover model i reckon. this radio has .8 and 2.4 filters, not a scratch or chip in the front panel, one paint chip on the rack adapter, a little shelf dust on the chassis is all, the knobs paint isn't chipped, the knob inserts do need polishing, and the power cord's a bit dirty but still has the original little green tag. probably a CCA 9 or better, but i'm not sure i fully understand the cca rating system so i've tried to give a comnplete descriptiuon.

1496. WTB:Premimum price for Drake C-Line

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-29 00:00:00 UTC
From: rpeebles@ix.netcom.com
Message-ID: <35e77056.776118@nntp.ix.netcom.com>
Source record: 99978
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I want a late model Drake C-Line (R-4C/T-4XC) in a really bad way. At a minimum the R-4C should be clean with the 5 position crystal filter selectior (not marked AM, SSB, CW1 and CW2). Would prefer at least all of the CW filters, but I would be happy with at least the 500 Hz CW filter to start.

However, I am willing to pay a *PREMIMUM* price for a loaded collector quality C-Line, especially with the Sherwood 600 Hz filter in the 1st IF.

Thanks!

Rob

Hey Zombie-Brains! Do you read anything related to your "hobby?" For more than a year S&S Engineering has been advertising a digital dial upgrade for older gear. http://www.xmetric.com/sseng.

Lets see, you got this receiver as part of an estate(free), and don't have the money to follow up on your hobby?

An even better suggestion is to look at the Virtual Collins Museum site, which can be found at:

http://www.wa3key.com/collins.html

This is an excellent "jumping off place" for anyone with questions about Collins equipment, its use, repair, history, pictures of equipment, etc. I particularly recommend the "Collins Reflector" which is based out of Tempe Arizona, and info on how you can subscribe to that mailing list for free can be found at the Collins Collector Association site which can be reached by following the links on the Collins Museum page.

Surplus Sales of Nebraska perform a great service to Collins equipment folks, but depending on your perspective, you may find his prices to be a little expensive. In my experience, that depends on what you are buying, and how long you have been looking for the item. Many times, it is well worth just paying a little more, and getting on with the project instead of spending six months searching high and low to save $10. To some people, their personality types just won't allow them to spend the $10 extra, and would rather spend 2 hours complaining about the cost of running a business that sells items to hams...take your pick of perspectives.

All the best, hope this helps to get you pointed in the right direction with the Collins.

1532. FS: Hammarlund SP600J (modified) Read-on.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-29 00:00:00 UTC
From: Stephen Salamin <bassalamin@monad.net>
Message-ID: <35E8C0C3.4EF5B215@monad.net>
Source record: 100014
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Good Evening...

My Grandfather founded and operated Northern Radio Company, NY, NY
and a Canadian division, N.R. Mfg. Co., Ltd. Ottawa.

My father also worked there (VP) until Harris (Intertype) took control
and absorbed in 1972 or so.

They manufactered wireless telecommunication equipment (teletype), esp.
for U.S.Gov't, etc.

I have a single item available for sale....READ ON...
==========

NORTHERN RADIO Type 159 Model 1 Radio Receiver.....

A HAMMARLUND SP-600J Receiver, "...specially modified so it may be used
in dual or triple diversity receiving systems. It will receive any one
of the commonly used modulations, such as frequency shift, CW or Voice
(telephone) communications....can be used for radio teleprinter
reception, undulator tape recording and program reception, Multiplex
teleprinter circuits, or for remote service where the intelligence is to
be transmitted via land line or UHF link."

Freq. Range: 540 kilocycles to 54.0 megacycles in 6 bands.
Output: 2.5 watts undistorted
Sensitivity: 2.3 microvolts or better, signal to noise 10:1

Northern Radio Company Type 159 / Model 1 / Serial No 1147

Hammarlund Serial Number 54716519
==========

I guess that's the most pertinent info. If you need more, e-mail me
privately and I will collect and reply.

I do not know the exact age, perhaps 1963 (date on instruction book).
It may be newer (circa 1970), as it was in my grandfathers lab at home
prior to his retirement and death.

Unit is in GREAT condition, no cabinet - was rack mounted with other
Northern Radio equipment. Has not been used recently - boxed for more
than 20 years (not orig.).

ASKING $600 firm, plus shipping (recommend FedEx).

I'll be up-front: I will only accept Certified Bank Check, pre-paid.
I'll be happy to negotiate Sale Agreement via fax, at your request.

We can chat or chew, however, I expect this to go FAST....

Any further history about N.R.C. would be appreciated...

I appreciate your interest, too, (and reading all this)!

I have a front panel complete with VFO cover in good condition for
sale. $50 shipped.
Will include light gray touch-up paint along with the panel, which is
not dented and with all lettering intact. Only has minor edge touch up
required for a few very very small edge nicks.
This panel can be restored to like new.
73,
Jack

1536. FS:Eico 772 11-meter rig w/SAMS -- $25 plus shipping

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-29 00:00:00 UTC
From: jvercellino@sprynet.COM
Message-ID: <199808291732.KAA03560@m1.sprynet.com>
Source record: 100018

Well, I also have too many projects, and the conversion of this radio to 10 meters is just not going to happen. So...it's up for sale.

The EICO 772 is a tube-type CB tranceiver with crystal-controlled transmit and crystal and tunable receive capabilities. It has a built-in vibrator-type DC supply for use in the car.

Works well on 11 meters and it's in good condition. I also have the SAMS book for this radio which I will include in the deal. However, I do NOT have a microphone for it. I have NOT done anything to the circuitry of this radio.

$25 plus shipping from Chicago area (60516).

Please contact me directly at jvercellino@sprynet.com or (708) 431-2693.

73, John WB9OVV

Hi Gang,

I have several panel meters listed on Ebay (currently about $1 each).
They range from 0-50 vdc to 0-500 vdc and 0-50 adc. See them at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=radio_randy

Thanks.

Radio Randy

Dave,

Have I got the place for you! Subscribe to the Hallicrafters E-mail reflector, you won't be disappointed. To do it, follow the directions below:

To join the mailing list, send email:

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe hallicrafters

To be removed from the mailing list:

TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe hallicrafters

To post information/questions to the list:

TO: hallicrafters@qth.net

This mailing list is sponsored by Al Waller (K3TKJ).

Please address any questions to: k7on@qth.net

I have an HA-2 but haven't had more than a few minutes of air time with it. You can get a lot more feedback on the reflector. Good Luck.

Radio Randy

1548. FS: Valiant F/P and Case

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-30 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <35E9682B.44E09E6E@erols.com>
Source record: 99900

I just scrapped my original Valiant I. If someone needs a front panel and/or the case, let me know. Both of the above are in "usable" condition only! If you need these to get an otherwise physical junker on the air, fine. If you're trying to "restore to mint" your Valiant, I don't these will work for you. The case is "ok" (I have one can of new, dated 8/98, paint for the case) but the front panel has some minor deformaties from shipping. The markings and paint are "ok", though. I also have the bezel and calibration dial and may consider letting some of the "innards" go (no knobs or meter, though....yet). I'm open to offers plus shipping. Regards

Source record: 99903

-- I hope to locate a nice HF radio with 10 - 160 meters.
A nice FT-900CAT for around $700 range if possible.
I thought with new FT-100 and IC-706MKIIG about to be released
I to find a reasonable priced rig in the near future.
At present I have only a 40meter QRP CW rig and receivers.
I have no time to repair problems radios, so please do not impose any
problem rigs as possiblities.

Thanks,
Jack

1573. unusual estate sale in Ohio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-30 00:00:00 UTC
From: Bill Strangfeld <bstrang@iac.net>
Message-ID: <Pine.SUN.3.93.980830133509.15495E-100000@crystal.iac.net>
Source record: 99925

There is an unusual estate sale in central Ohio with over 2,000 square feet of electronic surplus. Most of it is from the 1940s and 1950s. There is NOS and surplus military and civilian components, test equipment (some GR), connectors, cables, cabinets, spools of wire, meters, aircraft instruments, waveguides, power supplies, x-ray machines, transformers, etc. There is also optical and mechanical surplus. Substantial amounts have been sold already including most of the tubes, WW2 radar stuff, and electronic counter-measures equipment, and all of the communications gear, and hi-fi items. But there still is so much that you have to see it to believe it.

If you are interested, you must go there to see it. It is in Springfield, Ohio, near Dayton, just off I-70. The seller is NOT able to describe items over the telephone and will NOT ship. Please do not ask him to. But if you go there, he will let you browse to your heart's content and his prices are very reasonable. He will sell one piece or as much as you can haul away. If you want to make an appointment, call Reece between 9 and 1l am, Monday through Friday, at 937-323-6300. (He can also be there Saturday, by appointment.) I have no connection except as a satisfied customer and am posting this for the seller who not have net access.

If you go, plan on getting hot, dirty, and happy. Take boxes. The seller needs to leave by noon on most days so you should plan to end your visit by then.

73
Bill

1575. FS: 1930 ARRL Handbook

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-30 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <1998083000474200.UAA25845@ladder01.news.aol.com>
Source record: 100020

The handbook is missing the covers, but the text is intact. The back page is folded. Price $20., postpaid.

Jon, K1VVC

1576. Re: Adding digital readout to my BA

Newsgroup: rec.radio.amateur.boatanchors

In article <19980829190516 00.PAA15391@ladder01.news.aol.com>, freqpolice@aol.com says...
>
>Hey Zombie-Brains! Do you read anything related to your "hobby?" For more than
>a year S&S Engineering has been advertising a digital dial upgrade for older
>gear. http://www.xmetric.com/sseng.
>
>Lets see, you got this receiver as part of an estate(free), and don't have the
>money to follow up on your hobby?

Hey dummy, not everybody has the money to fill a house with boatanchors purchased for obscene prices on ebay. This is my only BA, given to me when I was 11. I have this group on my newsrc, but I don't follow it very much nor the BA hobby that much-most of the postings here are FS ads for equipment I have neither the money or the space for. SO just cool it, ok?

1577. FS: Drake SW4A and MS4 Speaker (Newsgroup offer)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-30 00:00:00 UTC
From: kyw1060@aol.com
Message-ID: <1998083001442700.VAA03193@ladder01.news.aol.com>
Source record: 100022

I have a SW4A and MS4 Speaker for sale. Both items are in Very nice condition. (Pictures upon request) I know that the value for the radio alone goes from $250 - $350.00(See Shortwave Receivers Past and Present) speaker probably atleast another $30 -60. Make me an offer. What I will do is close this out Tuesday at this time. I will post on this newsgroup if it has sold.

On Sat, 29 Aug 1998 09:48:58 -0400, "MIKE M."
<PROAUDIO99@prodigy.net> wrote:

>Can anyone tell me what these are used for ?

Mike -

They were used in a number of 1,000 watt AM broadcast transmitters,
some of which are still in service, as both RF and modulator tubes.

>Do the have any other uses ?

Yes - folks build high-power single-ended-triode audio amps with them.
I presume that they have also found some use in amateur transmitters.

>What are they worth N.I.B.

Depends on brand and age. Svetlanas are $165.50, Chinese are $105.00.
Since yours are RCA then, if new, they should be worth more than
either of the imports.

>Any interest ?

Depends on their condition and what you are asking.

- Dale

Message-ID: <35E8BC46.275600A8@iglou.com>
Source record: 100024

Kenwood Station For Sale or Trade:

TS-520SE 160-10 Meter +WWV HF transceiver in really nice condition, works great with full output on all bands. Inside looks like a new one (never owned by a smoker). Has CW filter installed. With owners manual and spare set of tubes.

$300 split shipping or trade for a like condition TS-120S or what do you have?
Might be interested in a Dentron HF-200 + Pwr supply

E-mail me if interested crslex@iglou.com

Thanks Mark KB4AEP

1580. Re: Henry Part Needed

Newsgroup: rec.radio.amateur.boatanchors

Source record: 100025

Hello Robert.

Why don't you call Henry Radio in Los Angeles. They closed down their retail store but they still have their Amplifier shop open . Call the store number and ask for the Amplifier service shop. They will probably sell you the switch.
73's de Mike Tyler, K6STU.

1581. FS: Rare TMC GPR-90

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-08-30 00:00:00 UTC
From: wjoew@aol.com
Message-ID: <1998083004564400.AAA27980@ladder01.news.aol.com>
Source record: 100026

I have a very nice (9+ on a scale of 10) TMC GPR-90. This is a rack mount receiver (no cabinet). The radio is in excellent cosmetic condition and works perfectly.

The top shield cover for the RF section is missing, but can easily be made from a sheet of heavy guage aluminum. I will include a template for this shield.

Reason for selling---I have two of these fine radios and only need one.

I want $495 plus shipping for the radio.

Joe

You've hit it on the head, Will - if something is described as 'rare' and a few folks talk about it, it suddenly goes through the roof for the 'collector/speculator' crowd. To an extent this makes sense with the supply/demand logic. But turning old radios into 'rare collectibles' is a double-edged sword - it might make some of your gear more 'valuable' price wise, but it also assures that you'll pay more over time to obtain other rigs you might want.

The SX-88 is certainly a nice radio and somewhat rare to boot, but is it worth over $1000? That's something you have to ask yourself if you want one. I've been after an SX-115 for a while now but haven't gotten one for one reason only: I'm not willing to spend the prices some folks want. They're 'supposed' to be rare also, but in the last week I've had the opportunity to purchase 5 of them if I wanted to pay the price. I didn't. One was listed on Ebay last week with a reserve over $1000 also. Did it sell? No. What was the high bid? $510, if memory serves me correctly. This is more in line with the value as I've seen/been told. I certainly won't spend more. Seems to me this indicates more of what folks are willing to spend since ebay is known for hype, hysteria, and big prices.

It all comes down to how badly someone 'needs'(wants) one of these radios and why. Ego can really inflate prices. The need to say 'I've got one of those' can be strong to some, which is why certain radios sell for incredibly high prices. But to those of use who want them to use and enjoy they aren't worth as much.

It all depends if you're looking for a nice radio or an 'investment' Or, which do you prefer - old radios or money? Sure does take some of the fun out of boatanchors for me, though. Perhaps I wasn't brought up right? Maybe it's just the times we live in now. You use to be able to take folks at their word, too.

This is what happens when you mix business with pleasure. Unfortunately the buyers who pay the prices are just as responsible(moreso in my opinion)as the sellers who price them. This leads into one of those

'chicken or the egg' conversations though.....

This is my own little opinion, but I don't mind sharing. ;)

You'd better hurry before you're overwhelmed! The Amateur Radio Retail Lobby is trying to open the floodgates to increase the sales of those big $3-$5k rigs for their advertisers(guess we didn't buy enough of their books). It certainly won't get any easier if they can push through their lastest scheme.

Got a bad feeling that '73s' and 'guide wires' will seem tame in comparison.

73, TDB ;)

Hello, as promised I'd come through with more complete,
original, good to excellent condition Antique electronic
and audio catalogs.
All are as represented, ALL SALES FINAL on literature.
Prices below are FIRM, and INCLUDE SHIPPING to anywhere
in the lower 48 U.S. states. Others by quote. Some of
these catalogs have stuff YOU ONLY CAN DREAM ABOUT...
Thanks, first come, first served. Much more to come.
Sorry, but this list is in NO PARTICULAR ORDER....
Regards, Joe Pratt

THIS IS WHAT IS HERE RIGHT NOW:

Lafayette Cat.# 740, 1974, 473 pgs. includes order forms,
not mint but real nice, 100% there, 18.00

Lafayette Christmas cat.# 651, 1965, w/order form, 139 pgs.,
very nice,100%, 28.00

Radio Shack "newspaper type" catalog, # 117, Jan/Feb 1962,
"Annual mid-winter sale",near mint except for one small
tear, 40 pgs., 25.00

Lafayette cat.# 670, 1967 100% complete in near mint shape,
511 pages, looks like it did on your coffee table in '67,
yours for 33.00

Key Electronics, Inc. 1963 audio discount cat# A-17, 20
pages, very nice shape and very interesting, 18.00

Radio Shack 1958 "Guide to electronic buying, good shape,
100% complete w/ order form, just CRAMMED with good
stuff, 225 pgs. 35.00

Radio Shack cat.# 96, 1961, 100% complete w/order form,
193 pgs. very nice, 35.00

Allied's 1959 winter supplement #183, 100% there,
56 pgs, very nice 20.00

Allied's March, 1967 winter sale cat# 263, 90 pgs.
100% complete w/ order form, very nice, 20.00

Allied's "festival of values" supplement # 182, 1958
100% complete, good shape 48 pgs, 20.00

Allied's 1960 winter sale book, 105% complete! WITH
original 'Knight kits' glue-on flyer still attached

to front cover, special pull-out Knight kits brochure,
56 pgs, very nice, 28.00

Allied's supplement #133 to 1953 cat.#131, 48 pgs.
of the good stuff, 25.00

Allied's supplement #185 to cat. #180, 1959, 56 pgs.,
"Summer bargains" issue, 100% complete, 25.00

Allied's winter sale cat.#253, 1965, 93 pgs., page
92 a little crumpled in corner, 100% complete
w/ order form, nice, 25.00

Lafayette cat# 660, 1965/66, good cond., spine is
missing a little paper at the top, nice though
100% there w/ order form,511 pgs. 28.00

Lafayette holiday Christmas gift guide # 661,
supplement to the above catalog # 660, 107 pgs.
100% complete, but cover is loose, 1966, 15.00

Lafayette winter cat# 662, 1966 100% there w/ order
form, exc. condition, 107 pgs. 20.00

Lafayette holiday gift guide #671, 1967 107 pgs.
near mint but missing order form, 15.00

Allied cat# 180, 1959, 449 pages of mind-blowing
stuff, 100% complete w/order form, v.good, 35.00

Allied cat# 250B, 1966 505 pgs. of goodies, 100%
complete w/order form, 30.00

Allied radio supllement #132, 16 pgs, 1952,
good shape, 10.00

1960 Federated purchaser cat., 300 pages shows a
little wear, has small hole in the last 6 pages,
but real cool.. lists Genelex KT-66's for 3.50 ea.!!
Try getting that deal these days! 20.00

Radio Shack 1957 cat.# 57, showing some wear but
pretty nice for it's age, less order form, 25.00

Lafayette cat.# 743, 1974, 111 pgs.,100% complete
w/ order form, nice, 20.00

Lafayette cat.#681, 1966, 123 pgs.,100% complete
w/order form, v. nice, 25.00

Lafayette "GIANT Syosset expansion celebration sale
newspaper type cat.# 623, June 1962 64 pgs. very
good cond. and RARE, 25.00

Lafayette cat. # 631 1962 newspaper type catalog,
64 pages, very nice cond, 25.00

Terminal Radio Corp's 1959 high-fidelity audio
digest catalog, straight from "Radio Row"
on Cortlandt street in NYC, 90 pages CRAMMED
full of dreamy items, rare and in nice
shape, 30.00

Thanks to all, I'll post more as I find 'em!

1998 Fall Classic (& Homebrew) Radio Exchange

The Classic Radio Exchange ("CX") is a contest celebrating the older commercial and homebrew equipment that was the pride of our ham shacks and our bands just a few short decades ago. Our object is to encourage restoration, operation and enjoyment of this older equip- ment. A "Classic" radio is at least ten years old (age figured from first year of manufacture), but NOT required to participate in the Classic Exchange. YOU MAY USE ANYTHING in the contest, although new gear is a distinct scoring liability. You can still work the "great ones" with your new equipment!

The Classic Exchange will run from 1900 UTC September 27, to 0400 UTC September 28, 1998. Exchange your name, RST, QTH(state/ province for US/Canada; country for DX), receiver and transmitter type (homebrew send final amp tube or transistor), and other interesting conversation. The same station may be worked with different equipment combinations on each band and on each mode. CW call "CQ CX;" phone call "CQ Classic Exchange." Non-participants may be worked for credit.

Suggested frequencies:
CW: 3.545, 7.045, 14.045, 21.135, 28.180
Novice/Tech Plus: 3.695, 7.120, 21.135, 28.180
Phone: 3.880, 7.290, 14.280, 21.380, 28.320
7.045 and 3.545 will probably be the most popular CX frequencies.

Scoring: Multiply total QSO's (all bands) by total number of different receivers plus transmitters (transceivers count as both xmtr and rcvr) plus states/provinces/countries worked on each band and mode. Multiply that total by your CX Multiplier, the total years old of all receivers and transmitters used, three QSO's minimum per unit. For transceiver, multiply age by two. If equipment is homebrew, count it as a minimum of 25 years old unless actual construction date or date of its construction article (in the case of a "reproduction") is older:

Total QSO's all bands
times
RCVRs + XMTRs + states/provinces/countries
(total each band and mode separately; add totals together)
times
CX Multiplier:

SCORE = QSO's x (Rx + Tx + QTH's) x CX Mult

Certificates and appropriate memorabilia are awarded every now and then for the highest score, the longest DX, exotic equipment, best excuses and other unusual achievements. Send logs, comments, anecdotes, pictures to Allan Stephens, 106 Bobolink Dr, Richmond, KY 40475. Include TWO-stamp SASE for next CX Newsletter and announce- ment of next CX. E-mail reports may be sent to modsteph@acs.eku.edu (Al, N5AIT).

I have for sale a BC-306A Antenna Tuning Unit. This was used with the BC-375 transmitter.
The unit is in fair cond. with a few paint chips and scratches. It comes with the bottom mounting plate.
I am asking $125.00 or best offer.

My ART13 has been my main rig since '89, they will run circles
around a Viking. Between the 10 channel memory, AM/CW sidetone,
built in freq meter and brick sh*t-house construction of a
Collins design, there are very few WWII vintage transmitters that
are as adaptable to "ham" operation as the ART13. IMHO

Please do not destroy these ART-13 transmitters.
There are plenty around that are already hacked,
sawed, and otherwise turned into worthless junk.
These are quickly-disappearing pieces of
technological history and need to be preserved.

Take all the articles you've ever seen about
chainsawing them up for new audio chains, putting them
on 10 meters, creating interstellar ion drives
and other silliness and throw them out the window.
It makes no more sense to try and make a YeaComWood
out of an ART-13 then it does to try to make a
Formula-One racer out of a Model-T Ford.
Far better to enjoy the romance and history of
the old Ford then turn it into swap-meet junk.

I have put several ART-13s on the air in original,
unmodified condition. I even use the dynamotor.
The only thing you need is an external antenna
tuning capacitor and a large-button carbon or
preamplified dynamic mike. No, it won't have
broadcast quality audio. If you want that,
you're using the wrong transmitter. If you
want your friends to smile and say "wow!'
when it tunes itself up, you're in the right place.

Forget all that nonsense about TVI and harmonics.
It's a myth born of improper operation and tuning
and spread by endless bull-hocky articles
printed in CQ and 73 in the 50s.
A properly-tuned and operated ART-13 is an
excellent transmitter and watching that Collins
autotune do its thing is really neat.

If you don't want to keep them original, please
consider trading with someone for a previously
modified unit or for something else you might
enjoy. You can't buy these at Walmart, guys.

David Stinson <arc5@ix.netcom.com> wrote:

>Please do not destroy these ART-13 transmitters.

I strongly agree. I've been using a Navy ATC/ART-13 as my main AM and CW rig for almost a decade. With some TLC and a decent power supply they'll put out the better part of a 1/4 KW. Some easy mods are in order, but they are the original put-a-brick-on-the-key rig.

You might want to take a look at the ART-13 articles that were published in the first five years of ER magazine.

I realize they're your property to do what you will with, but if you choose to, trade them for parts or another rig more to your liking.

Source record: 99806

I have for sale a BC-654A radio set.
The set is in fair condition and looks like it saw some action during WW2.
It has some paint chips around the edges and a small ding on one of the corners.
It also has some numbers and letters stenciled on the outside case. The inside frount panel is in very good condition. It is clean and has all the original knobs but the antenna tuning knob has the spinner broken off. The set has no mods.
When I got this radio I opened it up and discovered that someone had removed ALL of the tubes and the plug in crystal (I hate it when that happens). No other inside parts are missing. The inside chassis is very clean and looks like new. The set is also missing the J-48A that attached to the frount cover.
I am asking $200.00 for the set or best offer.

Cross-posted to: misc.industry.electronics.marketplace,rec.radio.amateur.homebrew,rec.radio.swap,rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Hi Gang,

My selection of round panel meters (ranges 0-50 vdc to 0-500 vdc and 0-50 adc) are still available on Ebay. These meters were built around 1958 and were removed from an Air Force computer system (using tubes!).

The ammeter has a 50 mv full scale sensitivity (could be used for a 0-50 millivoltmeter) but comes without the "external" shunt.

You really SHOULD take a look, prices currently range from $1 to $6.50. Follow this link:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=radio_randy

Thanks.

From: Radio Randy <rjones@plix.com>
Message-ID: <35EB79CD.1538@plix.com>
Source record: 99821

Hi Gang,

I have a (mostly) complete BC-375E transmitting set but don't have any tubes. I'm NOT crazy enough to pay for 211s (at the going rate) but HAVE been looking at the Svetlana 811 and 572 series tubes (without the plate caps).

Has anyone had any experience getting one of these transmitters on the air and, if so, how did you do it? On that same line, the Svetlana tubes come in various gain levels and plate loads. Any specs I might go by to make my tube selection?

Thanks for your help. Oh, since I don't spend a LOT of time on this group (I get plenty of stuff on the Halli E-mail reflector) I would appreciate a direct E-mail when info start coming in. Thanks again.

When I see these postings saying "can easily be made" or
"can easily be fixed/repaired/touched up" I always wonder --
if it is so easy to do, why doesn't the seller just DO it and
then the fault wont be there... if it's so easy...

1634. FS Collins Filter

Newsgroup: rec.radio.amateur.boatanchors

Hello,

I recently got a new receiver in my collection and need some extra
information of it.

It is a B21b and is dated 1944. coverage is from 1 Mhz to 20 Mhz. It has
the bleu front like known from the marine type receivers.

Hope yaou can help me,

Erwin

Used in older plate modulated AM broadcast rigs. 5 kw to 10 kw class.

Worth several hundred dollars each in new shape to the person that
really needs them. Not much to the rest of us.

Here's a list of a few things folks on this group might have an interest

in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Dynaco FM-3 FM tuner. Excellent condition with VERY bright eye tube.

Works great! $100

2.) Lambda model 50 regulated power supply. 0-500 VDC @ 500mA Also has bias and filament supplies. $150

3.) B+K model 747 Dyna-Jet tube tester. Mutual conductance type. Excellent condition. $125

4.) Military test socket adapter set MX-1258U. Provides test points for all tube types 4, 5, 6, 7pin, octal, loctal, 7 and 9 pin miniature. In original case. $40

5.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges. Good to 400 MHz. No slugs needed! $125

6.) Heathkit OP-1 professional oscilloscope. One of the best tube scopes

heath ever made. MINT condition. (Unit was assembled this year!) 6 MHz bandwidth. 5" CRT $75

7.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable

current limiting. Volt and Amp meters. Good condition. $200

8.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm outputs and level meter. $150

9.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to 3 V output (+20 dBM) into 50 ohms $150

10.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM modulation. $150

11.) Racal/Dana 1994 universal counter. measures frequency, time, period, etc. Up to 160 MHz. Dual channel. $125

12.) Hitachi VK-C350 color CCD video camera. Has S-Video and NTSC outputs. Can be genlocked. Professional quality unit. With Zoom lens. $100

13.) 6 foot equipment rack. Gray hammertone. Has RCA logo on it. PICK UP

ONLY! $25

14.) Box of used, tested tubes. No useless TV types. Mostly pulls from test equipment and industrial gear. 6 and 12 volt types, lots of Industrial/military types. Some audio types. Approximately 400 pieces total. Prefer pick up. $200

That's it for now. Thanks Again!

73,
Bob Weiss N2IXK

Randy:
I have extensive experience in putting the honorable,
cranky veteran BC-375 on the air, but it was with
the 211s and 10 and entirely unmodified, as God intended.
The only "mod" needed is a large-button carbon mike.
Don't let anyone tell you all those stories about
TVI and instablity. Military transmitters got a
bad rap for TVI and harmonics because people mistuned
them and then wrote articles about mistuning them.
The "instablity" is a matter of proper neutralization.
I have many mil transmitters and the 375 is my favorite.
Acres of black wrinkle, huge tubes and so primative...
I really enjoyed the challenge of making it work.

I'm also looking-into alternate tubes so more
of these very historic transmitters can return
to the air. I don't have any information
on the 572-like tubes you mentioned that have
no plate caps. Can you send some information
on them so I can pursue?

I chase tornadoes, and vice versa...

There be many a storm chaser in Kansas.
Each hath felt the hellish winds of a F4 and tested his bladder control.
Some wear Depends; still others bare puckered seat covers, stained and dank.
Aye, the screaming winds can make cows fly. They crush and bend yon semi truck.
Though the Hollywood chaser remains undamaged in his red Dodge Ram pickup.

Storms more violent that an Arkansas divorce. Dreams shatter and hope is gone. Be it marriage dissolve or twister's wrath, someone is going to loose a mobile home.

I am posting this for Les Locklear who does not have internet access.
You can write me back or better yet, call Les, (228) 864-8384 who is
in the Central Time Zone.

He want to trade his HQ-180X for an authentic SP-600JX cabinet.

Thanks !

1663. WTB: Good Tube Tester

I am still looking for a mutual conductance tube tester in very good operating condition. I am interested in Hickok units and others. Recent calibration is a plus. Not interested in units in "unkown" operating condition!!! Please email me and let me know what you have. No junkers please as I already have enough of those!!! You must be willing to allow me to return the unit for a full refund if it does not operate as correctly when received. Thanks for reading this message.

Kenwood TL-922A $850
Heath SB-200 $225
Gonset $200

Miscellaneous
Drake Wattmeter W-4 $70
MFJ Versa Tuner 945C $75
MFJ Versa Tuner II $40
Astron RS-35M $100
Astron RS 20A $60
Power Supply PHC 412 $100

1667. 51S1F FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-01 00:00:00 UTC
From: lurch@theramp.net
Message-ID: <35ec63f8.2409307@news.theramp.net>
Source record: 99851

Circumstances force me to offer for sale my pristine 51S1F, very late WE s/n 46XX with RE PTO subchassis, apparently a crossover model. Works good. Not a scratch or chip in the front panel. The only defects are a chip in the paint on the rack adapter and a dirty line cord, which still has the little green tag attached.

$1400 o/b/o, buyer pays shipping.

73, Brian KA9EGW

1668. Gonset Sidewinder 2 help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-01 00:00:00 UTC
From: kc5ijd-NO-SPAM-@sprintmail.com
Message-ID: <kc5ijd-NO-SPAM--0109981623080001@1cust189.tnt9.hou3.da.uu.net>
Source record: 99852

I have recently acquired a second Gonset 900A Sidewinder 2 meter rig and have a question.

Both of these sets have an RF preamp board in them which is not in the manual.

With the first set, I thought that it was an addition by the previous owner(s). However, finding it in the second leads to the conclusion that it is a factory modification.

Anyone have any information about this? Diagram of this particular model? Reason for change (must have had something to do with sensitivity)?

hello,

i read from this group almost everyday, however i have not posted much. i was reading through some old cq magazines tonight and really realized what i missed out on. the years of the magazines were 1971, '72 and '73. the advertisements of the heathkit gear really got me thinking, "why in the world dosen't SOMEONE bring this type of gear back?" i know there are several types of kit mfg.'s around, but what i have seen does not compare to the heath stuff (in my humble opinion.). i also know this subject has probably been beat like a dead horse in this group, but i felt like sharing my thoughts. the money to be made and the great gear that would come from it!! i am working on improving my technical skills and really wish i could call up michigan and order something from them!

one other thing, reading cq from 20+ years ago is more entertaining to me than it is to read it today! man, the technical articles were great! imagine someone writing an in depth, tear it apart and put it back together article on how to "improve the the performance of your jap made, multi kilobuck rig" ???? at this stage of my technical training, i'll admit i don't have the balls to take the cover off the damn thing, much less take it apart! i was born in '73, and man i really missed out!

tnx for reading and replies more than welcome.

Actually, the photo shows an R43 speaker, which is the correct speaker
for this model, though not as attractive as the R42. The set has two
unoriginal knobs, and the seller had set an absurd reserve price of
$350, which was not met.

HI Mike OM,

What you are becoming aware of is the technical 'dumbing-down' of ham radio literature over the years, particularly in the U.S. Quite a contrast, isn't it? And you have only gone back 20 years in your reading. Try 30, 40, 50+ years back!
The demise of Heathkit was a direct result of declining interest in kit building, associated with the availability of complex, factory built gear from offshore, such as Japan. I too join the legions of Heathkit builders who miss the fun of building their kits, and I still have and use some that I have built.
So, we have only ourselves to blame; the marketing research shows time and again that the average ham radio reader today is just not technically oriented (hard for me to think of ham radio as anything but a technical hobby, but there you have it), and magazines, of course, must serve their target market, since they survive via advertising.

To obtain more technically-oriented material on ham radio, you need to subscribe to limited circulation magazines such as Communications Quarterly, QEX, Electric Radio, or QRP-oriented literature such as NorCal's QRPp magazine, and others. I can also highly recommend the RSGB handbooks, which contain more technical material and a wider variety of information than the ARRL ones.
Enjoy your reading, and remember, you can still build excellent performing, cost effective rigs that provide the ESSENTIAL functions today. It is actually getting easier, not harder. All it takes now, as back then, is genuine interest and motivation.

73 and GL,
Don, W6JL

1683. For Sale: Unbuilt SB-1000 Linear Amp with Matching QSK Board

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-02 00:00:00 UTC
From: robcap@aol.com
Message-ID: <1998090220320100.QAA23410@ladder03.news.aol.com>
Source record: 99743

For Sale: Unbuilt Heathkit SB-1000 linear amplifier. Again I'm thinning out my duplicate kits in my Heath collection.

This sale includes two unbuilt kits sold as a set: the SB-1000 linear amplifier, and the matching SBA-2000-1 QSK board. The kits are in pristine unbuilt condition, with original packaging and documentation. The SB-1000 parts carton and transformer box are still factory sealed. The QSK board is particularly rare.

I use an SB-1000 that I built this year in my own station. It puts out approximately 850 watts with less than 100 watts of drive power, and it works on 10-160 including the WARC bands (10 meter circuitry is included, and the builder snips one wire to enable operation on 10). The SB-1000 was also a real pleasure to build, and it is a real bruiser on the 20 meter SSB pileups.

Heath originally sold the amplifier for $739.95, and the QSK board sold for $189.95. I'm selling the pair of kits for $750, which includes UPS ground shipping, insured, within the continental U.S. I'll ship upon receipt of certified check or money order.

You can reach me by e-mail at "Robcap@aol.com".

73,

Rob, W3DX

1686. For Sale: Unbuilt Heathkit Color Television Set

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-02 00:00:00 UTC
From: robcap@aol.com
Message-ID: <1998090220441200.QAA20952@ladder01.news.aol.com>
Source record: 99746

Spring cleaning continues.

For Sale: an unbuilt Heath GR-900 24-inch color television. I'm selling it because it's quite large, taking up four large boxes, and I don't have room to store it.

This is a very, very nice kit. It's private labelled "Bell and Howell", and was offered by Bell and Howell as a color television course. (But otherwise it's a heath through and through) It's built in stages, and each stage constitutes a mini course on color televisons. As I understand it, the unit has internal test equipment, so that it can be aligned with a volt meter. The boxes are very clean, and the components inside are undisturbed in their original state and pristine.

The unit comes with a front bezel, but does not have a case. It's designed to be wall mounted, or built into a console case, which Heath sold separately.

I believe the unit is complete. I acquired it from a gentleman who purchased two units many years ago. This fellow built one and stored the other. However, as with all unbuilt kits, the unit is sold as-is, because it would be impossible to inventory such a complex kit.

I'm selling the unit for $325, plus shipping. I will charge $100 within the Continental U.S. (this is how much I paid for shipping to acquire it). So the total price is $425 shipping included. I'll waive shipping for anyone who can pick this baby up in Charlottesville, Virginia. I'll ship upon receipt of a certified check or money order.

You can reach me by e-mail at "Robcap@aol.com".

73,

Rob, W3DX

1687. For Sale: Rare unbuilt Heathkit Micromatic Keyer

Newsgroup: rec.radio.amateur.boatanchors

For Sale: Unbuilt heath SA-5010 "micromatic" keyer.

This is Heath's last keyer product. The micromatic is a CMOS memory keyer with a membrane style keypad and built-in squeeze paddles (included). This is a real collector's item (of which I have three-- one to build and one for the collection) so it's going into the spring cleaning.

I'm selling this rare unbuilt kit for $175, which includes UPS ground shipping, insured, within the continental U.S. I'll ship upon receipt of certified check or money order.

You can reach me by e-mail at "Robcap@aol.com".

73,

Rob, W3DX

1688. For Sale: Unbuilt Heathkit VLF Converter

This is the last of the seven unbuilt sets that are part of my Spring (Fall?) cleaning. I may have one or two more pieces for sale in the next few weeks.

For Sale: Unbuilt VLF converter, model HD-1420.

This is a nice little kit for exploring the world of Very Low Frequency. It converts CW signals from 3.510 to 4.010 Mhz to 10Khz to 500 Khz.

I'm selling this unbuilt kit for $60, which includes UPS ground shipping, insured, within the continental U.S. I'll ship upon receipt of personal check or money order.

You can reach me by e-mail at "Robcap@aol.com".

73,

Rob, W3DX

Hello, I have the following literature that is out of print,
and very hard to find. These are very high resolution LASER
monochromatic reprints of the rare originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices INCLUDE POSTAGE, in the
continental USA. Others by actual quote.
Thanks, and if you need tubes, visit our sister screename,
Tubecntral@aol.com

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2,069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"
price update for Dec. 6, 1946.Another excellently illustrated info
source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951
25 pages crammed full of information IN DEPTH! Has everything you
ever wanted or needed to know about running these tubes, a real

nicely illustrated easy to understand manual, Price 10.00
Thanks for reading, if you have any questions or need to order,
Please respond to my mailbox...

You said it! I was born at about the time the HW101 was (late 60's), and
I
really miss Heathkit! I built a bunch of their later SS test gear when I
was
learning electronics, and it served me well for a long time (Still have
a
couple pieces) I just recently got a hold of an UNBUILT OP-1
oscilloscope.
(unit is now built, and is FS). I just bought it for the fun of building
a
tube kit from scratch. I have completely torn down (down to the last
lockwasher) and rebuilt many older kits, including an SB-102 , a KL-1
"chippewa" linear, and a couple of DX-100s. The engineering that went
into
Heath gear is still impressive by any standard. Not sure why my hobby
interests in electronics are stuck in the same time as my birth, but I
get
enough of microcontrollers and digital synthesis from 9 to 5, It's great
to
play around with BA gear on the weekends! I have surprized a few
old-timers
at hamfests (who assume due to my age that I must be an "appliance
operator"). Always good for a chuckle! :) Keep those old rigs glowin'!

I can't help but wonder about this talk concerning Heathkit getting
out of the ham market. I remember getting my first ham rig back in 1976
after being an SWL'er for many years. It was a used Drake TR4 w/MS4 and AC4.
When I went to upgrade I considered buying a Heathkit. At that time the
SB-104 or SB-104A were selling and while they looked nice I had heard
too many stories of people building them and then finding missing parts
and waiting over a year for replacements. Also, not being able to get
them to work and having to send them back to Heathkit for fixing, and
waiting along time as well. Turned me off to them after the president
of the local ham club told me these woes. He had worked on his -104
for two years trying to get it to work.

Also, how could an SB-104 compete with an FT-101E selling about the same or even less money, and already to use. Appliance maybe but $729 was alot of money to a new ham wanting his first new rig and wanting to work the DX on 20 meters every night. Same story for the TS-520, TR4 or maybe even the Tempo 2020. Heathkit with a kit that took months to build for the same price or even more just couldn't compete.

And if you ever want to hear horror stories read about the last Heathkit transceivers they put out in the Heathkit book. To complicated for most kit builders (read having to send them to the factory to get them to work). What was the model number, SB1400 or something like that. Not something I pay much attention to now in my hamfest buying and collecting.

There was a time when an HW-101 or SB-101 sold for a couple hundred dollars less than a new Drake or Yaesu or Kenwood and it made sense to build your own and save money. But come the late 70's those reasons seemed to disappear. Like hams today price of a new rig is a big factor although today $3000 is the price of an average high grade rig. Good, better and best just doesn't seem to apply anymore compared to how they listed things in the old catalogs.

Today, I can afford to buy old boatanchors and have the fun of repairing them and bringing them back to life. Yes, sometimes I do a little dance when I solve a real dog of a problem and get an old radio to play again. My lady friend gets a kick out of that. It feels good to know I'm not just an 'appliance op' but I still think Heathkit priced and troubled themselves out of the
market. If back in 1976 they had been selling a good SB-104A for $500 or so things might have been different, but who is going to buy a headace if they can avoid it.

The single tube 6L6 xmtr on a piece of wood was in the 30's series of
QST. It even showed up in some early 40's Handbooks I think. I know I
sent a copy to someone before I sold those issues.

Now I am trying to find a circa 1969 Popular electronics xmtr that
used a single 50C5 !

1697. Ebay Feedback-- Be Careful!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-02 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <35EDE236.300D@ix.netcom.com>
Source record: 99757
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono,rec.audio.tubes

One thing you have to watch-out for on posting Ebay feedback-
there are a few scam artist that target someone
with good feedback, put up an alias name that *nearly*
matches theirs, rip-off people and then disappear.

Here's an example:

alias name of the good guy: "triple 8"
alias name of the bad guy: "triple_8"

So "hamster" just might actually be "_hamster".
It's possible.

The bad guy burns a few people. Since the names are
underlined in Ebay HTML, you don't see the "_" and
the bad feedback gets hung on the good guy!
I got caught like this once.

To avoid the trick, always check the real
email address of the person BEFORE posting feedback!

Kind Regards,
Dave Stinson

Source record: 99759

A problem with kits is the cost associated with writing the manual and packaging the parts, let alone product support and the design engineering involved to produce a product that can be sold in kit form. I do freelance writing, and you would amazed at how many hours it takes to write an assembly manual.

Packaging small parts into numerous bags is very labor intensive. Add it all together, and the price of a rig built on an automated assembly line becomes very competitive. The biggest lure of Heathkit was not so much the monetary savings, but the joy of actually building your own radio. The earlier Heathkits were IMHO much better than their later product lines. The Apache, DX100, Mohawk, and even the AR-15 stereo receiver are legends. Heath never fully adopted to solid state technology and near the end the quality and reliability of their kits suffered to some degree.

I built a similar but two-tube transmitter last year that used a 6L6 as
a P.A. which was driven by a 12AT7 crystal oscillator. It put out close
to 27 watts. I found the transmitter featured in an old book and built
it on an aluminum chassis. I made a lot of CW contacts from north
Alabama including Washington state and California. I think I still have
the info. here somewhere in case anyone is interested. I'd be
interested to know how anyone fares using a 50C5 tube.

I have recently added a Heath SA-2060A antenna tuner to my small shack. I will be running full legal power through it in the near future. Anyone have mods, matintenance and/or operating tips? Any serious concerns about this as a genuine full power tuner?
(It will be primarily tuning into a 160m drooping dipole with doglegs on 160-10m, feedline is commercial 450 flatline, the real heavy duty version (#12 or 14).

Here's a list of a few things folks on this group might have an interest

in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Dynaco FM-3 FM tuner. Excellent condition with VERY bright eye tube.

Works great! $100

2.) Lambda model 50 regulated power supply. 0-500 VDC @ 500mA Also has bias and filament supplies. $150

3.) B+K model 747 Dyna-Jet tube tester. Mutual conductance type. Excellent condition. $125

4.) Military test socket adapter set MX-1258U. Provides test points for all tube types 4, 5, 6, 7pin, octal, loctal, 7 and 9 pin miniature. In original case. $40

5.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges. Good to 400 MHz. No slugs needed! $125

6.) Heathkit OP-1 professional oscilloscope. One of the best tube scopes

heath ever made. MINT condition. (Unit was assembled this year!) 6 MHz bandwidth. 5" CRT $75

7.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable

current limiting. Volt and Amp meters. Good condition. $200

8.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm outputs and level meter. $150

9.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to 3 V output (+20 dBM) into 50 ohms $150

10.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM modulation. $150

11.) Racal/Dana 1994 universal counter. measures frequency, time, period, etc. Up to 160 MHz. Dual channel. $125

12.) Hitachi VK-C350 color CCD video camera. Has S-Video and NTSC outputs. Can be genlocked. Professional quality unit. With Zoom lens. $100

13.) 6 foot equipment rack. Gray hammertone. Has RCA logo on it. PICK UP

ONLY! $25

14.) Box of used, tested tubes. No useless TV types. Mostly pulls from test equipment and industrial gear. 6 and 12 volt types, lots of Industrial/military types. Some audio types. Approximately 400 pieces total. Prefer pick up. $200

That's it for now. Thanks Again!

73,
Bob Weiss N2IXK

I am considering buying an Icom IC-706 or 706mkII. Since my favorite mode is CW I would like to hear comments from anyone on how well this rig performs on cw. How is Icom's optional CW filters in this rig? Good S/N ratio ? I need something more portable to drag back and forth from my cabin and since I am currently lugging seperate rigs for HF, 6 and 2 meters the 706 would better fit my bill. Any comments at all would be welcome please.

Tim-

I cannot give you a fair reveiew on CW, as I do very little CW work. The IC-706 is an excellent rig though for all-around work. The MKII model has anumber of enhancements over the original model, and the current incentives from Icom make it almost a no-brainer as to which model to choose.

Portable, the 706 is very compact, rugged and a good performer on SSB and FM. The menu system does take some getting used to, but it grows on you. I have used mine now for several years, and have just bough tthe matching AT-180 for it. The separation kit is almost a must for mobile use if you are going to actually mount it. I use a Timewave DSP-9+ on SSB and don't miss the filters at all.

I would choose the IC-706 over and over again, but I have to admit I would have waited for the MkII if I had known it was coming.

Go buy one. You'll be hard pressed to find so many features in a small box like this.

1716. FS: Hammarlund SP-600J (Modified by Northern Radio Co.)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-02 00:00:00 UTC
From: Stephen Salamin <bassalamin@monad.net>
Message-ID: <35ECC995.213E6138@monad.net>
Source record: 99872

Good Evening...

My Grandfather founded and operated Northern Radio Company, NY, NY
and a Canadian division, N.R. Mfg. Co., Ltd. Ottawa.

My father also worked there (VP) until Harris (Intertype) took control
and absorbed in 1972 or so.

They manufactered wireless telecommunication equipment (teletype), esp.
for U.S.Gov't, etc.

I have a single item available for sale....READ ON...
==========

NORTHERN RADIO Type 159 Model 1 Radio Receiver.....

A HAMMARLUND SP-600J Receiver, "...specially modified so it may be used
in dual or triple diversity receiving systems. It will receive any one
of the commonly used modulations, such as frequency shift, CW or Voice
(telephone) communications....can be used for radio teleprinter
reception, undulator tape recording and program reception, Multiplex
teleprinter circuits, or for remote service where the intelligence is to
be transmitted via land line or UHF link."

Freq. Range: 540 kilocycles to 54.0 megacycles in 6 bands.
Output: 2.5 watts undistorted
Sensitivity: 2.3 microvolts or better, signal to noise 10:1

Northern Radio Company Type 159 / Model 1 / Serial No 1147

Hammarlund Serial Number 54716519
==========

I guess that's the most pertinent info. If you need more, e-mail me
privately and I will collect and reply.

I do not know the exact age, perhaps 1963 (date on instruction book).
It may be newer (circa 1970), as it was in my grandfathers lab at home
prior to his retirement and death.

Unit is in GREAT condition, no cabinet - was rack mounted with other
Northern Radio equipment. Has not been used recently - boxed for more
than 20 years (not orig.).

ASKING $600 firm, plus shipping (recommend FedEx).

I'll be up-front: I will only accept Certified Bank Check, pre-paid.
I'll be happy to negotiate Sale Agreement via fax, at your request.

We can chat or chew, however, I expect this to go FAST....

Any further history about N.R.C. would be appreciated...

I appreciate your interest, too, (and reading all this)!

Source record: 99873

Hello Jack,

Hook it up so that the normally closed (no coil voltage) side connects to the receiver, the common side connects to the antenna and the normally open side connects to the transmitter. This way, the realy is only energized on transmit.

Regards,

Bill

I "grew up" with much of the older Heathkit gear, Michael, and must
admit it sure would be nice if we could still buy such kits today.
Touring the Heathkit facilities in Benton Harbor, Michigan was an
experience beyond description. It was a very large facility, with
entire departments specializing in various aspects of Heath design,
construction/instruction manual preparation, component testing and
packing into final "kit form", factory assembly of Heathkits for
sale in "fully assembled" form, and more. I assume that high labor
costs (combined with high U.S. electronic component costs) prohibit
this type of operation today; such quality and quality control would
be extremely expensive. But in the 1960's, Heathkits offered great
value, their manuals were terrific, and their products worked well
(many of which are still working well today, after many years).

> the damn thing, much less take it apart! i was born in '73, and man
> i really missed out!

Reading the older CQ and 73 Magazines today can be both entertaining
and informative. Many of us enjoyed "modifying" our equipment, and
sometimes "modifying the modifications"! Not all of the modifications
"worked as advertised", but we attempted many of them anyway, and we
learned from our attempts. Sometimes, we learned "not to attempt",

but darned if we didn't try the next modification that came along! <g>
Our Heathkits were sometimes referred to as "the poor man's Collins".
I, for one, miss Heathkits. And I also (even tho I never thought I'd
think or say this!) miss Knight Kits. Without them, I'd probably
never have learned how to solder (or how to curse!)! ;)

73,

-bill

An unmodified ART-13 (with LF section) was my very first transmitter
back in 1974. Made a teenager (me) very happy!
Worked a lot of CW with it since the SSB'ers didn't like AM in those
days. Thanks to a local ham I built a power supply for it and had a
ball. Still own & use it every once in awhile to this day...

It's ok. I have used one at a field day that had a cw filter. It was pretty tight. But I wasn't overly impressed with the overall audio quality of the rig. Seems to maybe have a tad to much rf gain on the low bands. But I imagine this is due to catering to the mobile ops. It wasn't distorted or anything just kinda flat sounding. But heck, what can you expect from such a small radio, and also I'm spoiled on my 830 and other rigs. Good sensitivity on the high bands. Overall I'd say it's ok. Reliable with a decent track record. And small. I use a old IC 730 in my car, and has been a very reliable radio over the years. MK

It's OK. I have worked a few of them. Thought it sounds kinda of mushy above 35 wpm when in QSK mode. Like it's chopping some of the dashes or something. Don't know how well it RX's. Can only tell you what it sounds like over the air since I don't have one.

I can say, the faster you send, the better your signal must sound due to static and QRM. It's takes too much effort to guess what your trying to say... Best CW still comes from older rigs with a manual PTCW switch.

I thoroughly agree...how on Earth can anything be truly called "mint"
if it's been rebuilt? Granted, it may be truly fantastically restored
but I don't think the definition of "mint" would ever apply in such
instances.

> only 4) claim the company was destroyed by accountants in the management
> staff.

I'd also heard that as one of the reasons Heath disappeared from the scene.
It seemed to happen at a time when they appeared to be doing quite well,
with a very diverse product line...along with many Heath retail stores.
I believe the company was bought-out by Schlumburger, a German firm,
and they seemed to concentrate on scientific and measurement equipment,
and educational (electronic) equipment.

During the late 1960's and early 70's, touring the Heath Company in
Benton Harbor, Michigan (as a teenager) was a memorable experience
(almost as memorable as touring the beer breweries in Milwaukee, WI!).
The Heath factory was extremely "organized", with an obvious emphasis
on quality control. Customer service was also excellent; when you
called Heath with a problem, they would do their very best to help.
Even if you "messed up" in building one of their kits, they would
patiently do their best to provide competent support...and also
would fix any "customer mess-ups" at very reasonable cost.

Heath is truly missed.

Hi All,

Wonder if anyone on the newsgroup can tell me what a Magnum Six RF Speech Processor set up for the Drake line of equipment might be worth. The unit is in
excellent condition, with manual copy.

Thanks for the read...

Regards,

Walt, W2OKF
Foley, AL

Sideband Handbook CQ Magazine 1958, Don Stoner W6TNS. CQ Technical Series
232 pages Good Condition. Very good book for that era. $20 plus postage.

Single Side Band for the Radio Amateur 4th Edition 1965 Good condition $20 plus postage. I also have the 2nd edition 1958 for $20 plus postage. And finally, I have the 3rd edition, no cover and poor title page which I will sell for an extra $10 with either of the others.

Mobile Manual by ARRL First Edition 1955. Softbound 352 pages. $25 plus postage. I love those simple AM mobile rigs of that era, this book is a real pleasure for the old timer.

I remember getting a Heathkit catalog in 1983 and seeing them having a close out sale on the HW-101. For years and years I wanted a HW-101 and that was my last chance. I called the Atlanta store and they had one left. So I drove 2.5 hours that very day to Atlanta to get it. I still have that rig today and made three contacts on it last Saturday on 10 meters.

I can't begin to count all the Heathkit stuff I have bought and sold over the years. And those catalogs had everything for the ham except the muffin pans needed to hold all the parts.

The .05 caps are there to prevent RF from getting into the 129 through the power line which could act as an antenna with a nearby RF transmitter. They simply shunt the RF to ground. You can replace them with .01 mfd discs as well (Rated for 250V - 100% safety factor!).

I have seldom replace these as they tend to not to breakdown unless the power line was hit by lightning... you can test them with a cap checker. They have some good ones built into digital voltmeters nowadays. They could be open, in which case you would not notice unless you had a ham transmitter or something else generating hash through the power line. This RF would leak through the transformer and couple somewhere into the set. If they were shorted, then the fuse would have blown.

You can add a three wire line cord to the 129. Just tie the ground wire to the metal chassis. Just be aware of the fact that it's possible that an outlet is not really going to an earth ground. NEC say's it should... but sometimes electricans get lazy... also not all grounds are grounds to RF, especially about 15 MC.

I always recommend a seperate ground rod attached to the metal chassis of the receiver.

That's really all you have to worry about. The AC-DC rigs you have worked on are far more critical of grounds... (Don't Do It! - BIG SPARK!). That's the price you pay for -NOT- having a transformer!

The 129 is a great classic rig. Enjoy

Let me rephrase... it is not possible if you click on the name rather
than being slow and trying to type in the info manually. If you just
click you will always be sent to the right person.

Kind of like not wanting to click on a link from a website, but rather
type out the address manually. Why would you want to do this?!

To everyone that responded--

Thanks for the help! My dad bought about a dollars worth of darkroom equiptment from the guy at the estate sale, and just happened to notice some equiptment in the back of the garage... The guy said "Go ahead and take 'em!",and with that, my dad loaded up the car and left. The Hammarlund, one of the newer Heath scopes, and something else i can't yet identify were waiting in the car when he got home... Maybe you guys can help... (again)

Its a squareish grey metal case, with a big tuning scale on the front. the only MFG's markings are "VHF-152A" then "Made By Radio MFG Engineers Inc., Peoria, Illinois, USA"
The tuner goes from 27-148 megacycles, in three divisions. Only panel controls are "In/Out","Selector",and "Line". Only four tubes, a rectifier, regulator, and two mini's.

I assume it' some kind of converter? I'm relatively new to the boatanchor game, and I'd really like to get this rig fired up before I ship off to college (EE degree of course ;).

Thanks again to everyone that helped out!

Mike

Tie the ground lead of your new 3-wire cord to the chassis. Remember
that this is a SAFETY ground. You want a solid mechanical connection,
not just a soldered joint to some chassis ground lug. Use a crimp-on
lug on the end of the ground lead and get it under a nut and lock washer
somewhere convenient.

Discard the bypass caps on the AC primary.

The caps are there to decouple the AC line from from the receiver.
They prevent "tunable hum", a condition where the AC line frequency
modulates incoming signals.

Current UL specs call for line-bypass caps no greater than .01 mfd.
250 volt caps will be extremely marginal. The peak AC voltage 1.77
times the RMS value. Typical spikes from induction motors runs as high
as 600 peak in most homes. Use ONLY disc ceramics that are UL rated and
approved for line bypass service. These are available from DigiKey and are
made by Panasonic. They have a 3000 volt rating, and will have approval
stamps from UL and several foreign agencies.

Regards

Peter

Source record: 99698

Two more comments. A three wire ac cord is an excellent idea.
The green ground wire should go directly to the chassis. The white neutral
wire should be tied to one side of the transformer. The black hot lead
should
be fused (if the radio already isn't) and also should be on the side of the
line
that is in series with the power off/on switch. This insures that if the
fuse
blows, or the power is off, AC voltage is removed from most of the
circuitry.

The old filter caps are best reformed slowly. Most cap testers will allow
you to
gradually increase the operating voltage until the rated operating voltage
of the capacitor is reached,
This should be done over a period of several hours. Monitor the leakage
current with a series
mA meter. If the caps show more than a few mA leakage, keep the voltage at
that level until
the current falls off. If the leakage persists at more than a few mA,
replace them.
Use modern axial lead replacements under the chassis. Leave the originals
in place but disconnected (this is important as collectors want the outward
appearance
the chassis to look original).

Aaaah... glad to see there are still a few hams around....

Well here is another source of one tube circuits... "104 Ham Radio Projects for Novice and Technician" by Bert Simon published by TAB Books Book# 460 -Dec. 1969
card number 68-8648. If you can find this little book - buy it!

I built a one tuber from a 117N7GT and this little book. (That's 117VAC for the filament!!). I spent $ 6 including the tube and socket. Built it on a wood plank and it put out a whole 3 watts... enough to get across to work Cuba on a simple 50 foot wire (untuned).

Used a straight J-37 key. Got shocked a lot but then again... that was part of the "fun"... a 117N7GT is not for the faint of heart.. unless you want know 120VAC by feel.

It is a converter. The "Radio MFG Engineers" is a bit misleading,
because I never saw that name before, just the RME that many would
recognize.

That was before my time, but I went and checked for an ad for the
converter. It's older than I thought. They had a later converter, which
I thought it might be, but which wsa quite different.

I thought I'd find an ad in a 1950's QST, but before I found any of
those, I came across the December 1046 issue. The ad is right there on
page 187.

It covers 28 to 29.7MHz, 50 to 54 MHz and 144 to 148MHz.

"all gear, planetary dial"
"new miniature tubes"
"built in power supply"

"voltage regulator"
"sensitivity: on the order of 2 microvolts on all bands"
"image rejection of approximately 54dB"
"provisions made for use of four separate antenna connections"
"antenna changeover switch, band selector, tuning control, line switch"

It doesn't say what the output frequency is. It included the ten meter band because at that time the receivers might not have tuned it or tuned it badly.

It's tuneable, so it can't be too stable.

The address for the company was
RME
Peoria 6, Illinois
U.S.A.
though I'm quite certain it's not good any more.

> Don, W6JL
>

I agree with Don's assessment that Heathkit's demise. And like him, I also think of ham radio as a technical hobby. Here in San Diego, where we have an HRO store available, most new hams don't even make their own dipole antenna. They prefer to buy a vertical or multiband trap dipole, getting less performance. An example of the "dumbing down" of amateur radio. (I blame that on public domain exam questions but that is another subject).

Anyhow, I also miss Heathkit, although some of their designs weren't up to snuff, even for their day. But I STRONGLY agree with Don that building some or all of your own gear is still doable. It just takes "genuine interest and motivation". Homebrewing is no harder now that it was in the 50s. Its just different and requires slightly different skills.

But I am an optimist. I don't see ham radio as a dying hobby and after 24 years I still find getting on the air a lot of fun. In recent years I have had fun with sattelites (homebrewing my antennas and building converters from kits) and, God willing, I reach retirement age I hope to even attempt EME work.

Well I've got an Icom IC-706MKII in my '86 Chevy S-10 pickup.
It's mounted in the space below the AMFM/cassette player.
Don't run mobile CW with it as I only use it for SSB & sometimes FM.

It also makes a great SWL reciever

Antenna is a Bugcatcher. Don't use any kind of antenna tuner.

The following boatanchor radios are for sale. Purchaser to pay shipping and packing costs.

National NC303, working, clean,original, has XC303crystal and WWV Calibrator. $225.00

National NC183D, working, clean chassis, good front panel, great sounding AM audio,some cabinet scratches $160.00

RCA CR91A General Coverage Receiver. Hard to find radio with S meter, Needs a bit of TLC, working. Rack Model, post war version of the AR88LF. $200.00

Am looking for a decent Hallicrafters SX62, working properly, would consider on trade.

I have a Heathkit GR-91 that would be a perfect starter for someone on a budget and new to Shortwave. Please send me your offers..I don't post what I want because anything over .01 cents gets some loser two cents with nothing better to do than comment on what they think is right. I'll let you decide that, the interested party! So ???? plus exact cost of shipping.
Thank You
Everything works and the condition is 8.9 out of 10

It's NOT possible. Before you bid, you have the option of clicking to check the person's feedback before finalizing your bid. It doesn't matter how close someone ELSE has a name similar to it, you will only be reading the feedback of the person who's item you are bidding on.

1760. HELP! Restoring HQ-129X

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-03 00:00:00 UTC
From: mike5751@hotmail.com
Message-ID: <mike5751-0309980107510001@lax-ca69-36.ix.netcom.com>
Source record: 99776

Hey everyone...

I just recently got a Hammarlund HQ-129X at an estate sale, and I'm almost done recapping it. My question has to do with updating the AC cord to a 3 wire grounded one. There are two .05 mfd caps bridging the line on the primary side of the transformer, then they go to ground. The schematic can be found here:

ftp://bama.sbc.edu/boatanchor/downloads/HAMMARLU/HQ129X/P10-11.gif

I'm talking about C56 and C57. Should I replace them with new, get rid of them, or just put a new 2 wire cord on and use the antenna ground? This isn't the first radio that I've restored, but it is the first one thats got a power tranny (all the rest were AC/DC types) It's also alot more complex than the others.

Also, is there a simple way to check the filter caps for leakage?

Thanks in advance,
Mike D.

Oh yes it is. I got positive feed back from two people that I never sold
anything to. When I checked it out, I found that they had somehow put my nick
name as receiving the feedback instead of the person who sold the stuff to
them. As I said, this has happen to me twice.

There was an article by W5LET in Electronics Illustrated about a one tube transmitter which used either a 50C5 or 50L6 (your choice). This rig used a voltage doubler right off the 120 vac line and had a neon bulb which glowed if you had the plug in the wall backwards. I built one and it worked fairly well. That was a few years ago.

For those of you interested in this set it is a 1950 model. "Book value" from Bunis 4 is $30-$40. The chips and missing knob would lower the value somewhat. What it will fetch on eBay is anybody's guess.

That's because those people tried to manually enter in your name the
hard way, rather than just click on it to avoid any mistake like this.
If you do or read the feedback from where you are given the options this
mistake will never happen. Only to people that, for some reason, like
to type out the name manually and do it the long hard way.

1775. Plexiglass cleaning tip.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-04 00:00:00 UTC
From: Jim Mullen <jmullen@map.com>
Message-ID: <35f0b001.0@news.map.com>
Source record: 99643

While restoring a Johnson Valiant, I hit on a great product to clean and polish Plexiglas. Meguiar's 'Body Scrub' paint cleaner. This is an automotive product designed to restore older finishes. Apparently the size of the grit is small enough to do a great job on plexi without leaving scratches. I also tested white polishing compound, but found it to be too coarse.

Give it a try, I think you'll be amazed how well it polishes old, slightly scratched plexi. A light coating of Armorall or like product after the body scrub will leave those old dials looking like new!

As far as other cleaners, I find Simple Green fairly effective in removing the yellow smoke stains from plexi, but not from aluminum. Whitewall cleaner works well here but be careful, it is quite harsh and will remove paint.

Happy restoring,

Jim, WA1ZUH

Message-ID: <6spi9t$k6v$1@hihat.mwci.net>
Source record: 99646
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a Harvey Wells Z-Match antenna tuner for sale. Electrically good, cosmetically about a 7 due to some scratches in the paint around the front of the cabinet. This tuner includes a built-in dummy load, SWR meter, and switching circuitry, plus a manual copy for $150. Kinda hard to find, and considerably ahead of their time....e-mail me for jpg photo if desired.

Thanks and 73,

Bob W9RAN

1785. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6snt0o$3js@news.Hawaii.Edu>
Source record: 99714
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

As an addendum to my post earlier, I would also like to hear about titles in the categories of memoir, autobiography, autobiographical novel, and "creative non-fiction" (i.e. articles that are heavily personal in point of view). BTW, as a number of replies have commented on the subject of my master's thesis, just thought I should say that radio literature is a large part of the project, but not the whole thing. Academia seems a bit silly, I know. I know of one person who did a doctoral dissertation with the title: "The Semiotic Rhetoric of Bob Dylan's _Blonde On Blonde_, or Para-hermeneutics for the Masses." He he.

I have a DX-100 in great shape. The cabinet does show some age. I want to re-paint it the same color as the dX-100 was. I understand that the horizontal members of the cabinet came in 2 colors, light and dark grey. The dark grey matched the sides of the the DX-100. Can someone confirm that the DX-100 horizontal members, top and bottom were both light or dark grey. It will make painting much easier if the cabinet is all the same color.

Well you know how the story goes..boy meets radio..boy falls in love with radio...radio doesn't want to play.
I have a 1935 General Electric A87 4 band console. Let me preface all this by saying I have a limited understanding of electronics and I am at the early learning stage.
Radio did not work/replaced all caps including Electrolytics.
Used a lower voltage rated Electrolytic cap
radio came on...radio lights flickered...cap smoked then popped(Duh)
replaced cap when I got proper rated one. Nothing..replaced 5Z4 with recommended 5V4 nothing. Measured voltage comming off transformer at 56 volts and that was only on two leads(one lead at a time and other probe to ground)
What can I do...I hope I did not blow the transformer by using an under voltage rated electrolytic cap original cap (10 Mf 450V) used 10 Mf 160V(polarity observed) now there is a 10 Mf 450V cap which bytheway there are two. The original caps are 6" high and about one inch wide (Cylindrical) Any help would be greatly appreciated.
Mike

You should probably take this thread over to rec.antique.radio+phono where
repair information is handled.

In any case, assuming the voltage readings were on the AC scale and the
rectifier tube was out of the socket, and you were measuring the plate leads
(pins 3 & 5 ??(from memory)) then the transformer does not look good. If the
rectifier was in socket, pull it and check again for 250VAC to chassis from
each plate pin. If still low, then pull all the tubes and connect a 20W light
bulb in series with the AC input to the radio. Turn the radio on; the bulb
should be very dim. If it is bright, the transformer is shorted. Let us know
what you find, and we can offer further suggestions.

Neil S.

1794. Re: Help needed on old GE A87 Console

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-04 00:00:00 UTC
From: Bis Wichy <wichy@dallas.net>
Message-ID: <6sou1o$2bp$1@supernews.com>
Source record: 99723

OK by the numbers...

1) Check fuse... assumed you did this (duh !)

2) Get voltmeter and set to 120V AC

3) Check the power outlet, you might have tripped fuse there... if OK

4) Get pen and paper and draw layout and wires of transformer

5) Disconnect both sides of transformer and remove from radio.

6) Carefully check to see if you are getting 120VAC where the primary wires used to be.

7) Open metal shell of transformer, if it had one, and sniff... smell burned shellac? Cooked transformer has an very acidic smell. There might be a black spot. If OK...

8) Set voltmeter on continuity and check primary for short. (zero ohms) GOOD. If open... (Infinite ohms) primary winding transformer is BAD... if OK...

9) Carefully attach 120VAC to transformer windings directly. Use an old power cord and insulated alligator clips... Be careful on both sides (primary and secondary) make sure nothing is touching. Use electricians tape to cover bare wires. Is transformer smoking or smelling? If not...

10) Set AC voltmeter to 1000 V AC and attach to secondary leads. Secondary usually have three leads (one is a centertap). you should get a voltage on any combination of the three. You should see an AC voltage (150 - 175 - 210 - 250 - 275 is typical) (end to centertap)
If not then secondary winding is bad... If OK

11) Check filament leads. These are usually 6.3V AC or 12.5V AC. Depends on the tubes used. Without it, tubes won't light up. If OK...

12) Then transformer is good...

Post if you get this far... and don't worry, replacement transformers can still be had..

1799. FS/FT: RME DB-22A preselector

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-04 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6sp845$ktl@sf18.dseg.ti.com>
Source record: 99728
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have for sale or trade an RME DB-22A preselector. It is complete, but untested. The cabinet is in good shape, not dented and not rusted but the paint is in awful shape. Inside, it is clean and shows no serious corrosion or rust, no burnt-up parts, no obvious modifications. Now, the bad news. There are NO markings on the VFO dial! Big dummy (that's ME) disassembled the unit to clean it, and used (an unnamed brand) spray cleaner on the VFO dial, which instantly dissolved the markings! D'OH! Yeah, I felt really stupid, but the damage was done. If'n you have another dial from a parts set, this one's quite restorable (or maybe you can make your own?). BTW, the little paper Factory Test slip is still glued to the bottom cover (I managed not to mess that up!) and it was tested 3/1/49! The original interconnect cable and line cord are in good shape and still attached. I haven't tested the toobs.

Cash offers? Trades? I'm always looking for CW and novice transmitters (fixer-uppers, of course).

This is my work email address, so if you <REPLY>, I won't get it until next Tuesday. If you want to reach me before that, catch me at home:

Just a suggestion, but small isolation transformers are cheap. Also many surplus transformers have dual 110 windings to permit 220vac operation, they can also be used as cheap subs for isolation transformers. You can still have fun with those old circuits without shock hazards.

regards

Peter
-
Used a straight J-37 key. Got shocked a lot but then again... that was part of the "fun"... a 117N7GT is not for the faint of heart.. unless you want know 120VAC by feel.

Does anyone have any idea what a Collins RT980/GRC171
UHF Airband Transceiver is worth.This unit covers 220-400MHZ
AM with 100watts of RF Out and has thumbwheel switches to set
the frequency and is all solid state weighing in at 32kilos! .

For Sale Kodiak Two, tube type base amp. Looks are an 8.5, and inside a 9, it was just checked out
and all tubes are in excellent condition. It has 1 6LF6, driving 3-6LF6's, driving 6-6LF6's, this
is one big strong amp, it will produce big numbers, has a black case, brushed aluminum face, looks
very good.
$425.00 + shipping

Good for about 1800 watts.

Should cost you right at about 550.00 to retube it when it comes time.

This radio (the older 183, *not* the D model) is a very nice specimen that has been stored in a clean, dry finished basement for about 15 years.

Radio: front panel an 8 or better, cabinet 7 or better with a few small blemishes and nicks, nothing serious. I tend to be conservative--you may think it's nicer. Original knobs. Innards unknown, but the top of the chassis is clean after I got rid of superficial dust and dirt. I hooked a clip lead to the antenna screw and everything seems to work okay--S meter functions, stations come in, dial lights come on. The controls and wiping contacts are noisy and could use a spritz of DeOxit (big surprise). The center locating key on one 6J5 broke off at some point in the past and remains behind in the socket when the tube is removed, but this has no electrical effect. Someone more ingenious than I am can figure out a way to remove the key without pulling the chassis.

Speaker is the right match. I'd give it about an 8 for cosmetics.

Please note: I will not separate and will not ship.

From what I've seen, $225 for the combo is very reasonable considering condition and that the speaker isn't easy to find, but if the consensus of the group is otherwise, I'll reconsider.

I'm in Potomac, Md., a few miles outside Washington, D.C., and could deliver to Gaithersburg Sept. 13 if desired. Email, or call 202-955-2609 (office) or 301-983-2407 (home).

Very Clean! NO RUST! Great candidate for minimal effort restoration
to museum quality. There is no manual but there is a very LARGE
wooden speaker/stand that would be included free.

This radio is located in South Central Wisconsin (near Madison).

It has not been used for many years. The cord is deteriorated to the point
were plugging it in might be lethal. I do not have the time to do this
rig justice right now but, if you have the time and the cash, make me an
offer.

Thanks,

Dave, W2QA

You raise a very interesting point here, Don!

I recall as a young teenager "snooping around" the basement of my parent's house...and "discovering" electronics magazines from the late 1950's and early 1960's...perhaps my first introduction to the world of electronics (and ham radio). We won't mention the Playboy magazines that I found...that's another story altogether! <g>

I carefully read, and re-read the old electronics magazines; there was much I didn't understand, which served to "spark" my further curiousity. Also "discovered" books, including some old ARRL Handbooks, and an old copy of Terman's "Radio Engineering". Wow, even more to try to figure out! This was "pre-internet" days, so it meant many trips to the local library...to obtain more books which perhaps would assist me in understanding this "strange" field of radio and electronics. Soon, my trips were taking me (on the bus) to Allied Radio in Chicago...and Newark Electronics in downtown Chicago. There, I found bins of parts as far as the eye could see...individual parts...resistors, capacitors, knobs, metal chassis, more types of tubes than I could ever imagine... tools I'd never before seen ("Nibbler" tools for cutting metal, for example). Snooping around a bit more, I "discovered" two hamshacks that rivaled most hamshacks of the day...the hamshack at Allied Radio, and the hamshack at Newark Electronics. Both of these places sold ham radio gear...manufactured by companies I'd never heard of...including some names we don't hear too much today...names like "Central Electronics", "Multi-Elmac", even transmitters and receivers manufactured by "Geloso". The ham radio "bug" bit...and seemed to have "bitten" me in a big way! It wasn't long after that when I had the opportunity to drive from Chicago to the Heathkit factory in Benton Harbor, Michigan. Another "amazing place" to visit...yet another aspect of the hobby to enjoy...building electronic kits. There it was, everything I needed to build a complete ham radio station, all nicely laid out in a cardboard box, awaiting my soldering iron! My "curiousity" made me wonder..."how does this thing work, anyway?"...altho the instruction book told me how to

assemble and solder the kit, how to "put it all together" and
align it...I wasn't satisfied with the usually rather brief
explanations in the assembly manuals which told "how it works";
I wanted to know a bit more about "what makes this thing tick?".
Enter the local ham who introduced me to the neighborhood ham
radio club...weekly meetings and theory lessons...the fun of
events such as Field Day and transmitter hunts...ahhhh...the
"good old days"! <g> Sure am glad I found those old magazines
in the basement, Don! (yep, the Playboy's, too!). <g>

According to the factory rep, for "real" plexiglass, they recommend Turtle Wax as a cleaner (not scratch remover), as the molecular structure of the wax provides the correct bond with the plastic. I'll try the Meguiar's stuff on some S-meter faces.

Haven't heard about nail polish, but the model train industry has a series of clear paints for doping bulbs. I've used it to dope the lamps in my L4-B.

Rich,
FYI these are Pentodes not Triodes. Fmax around 18 mhz, used in old WWII Navy get with suppressor grid modulation schems for about 25-50 watts out AM. Some folks did run them as grounded grid triodes in the early ssb days. Nice to look at, not much use otherwise unless you are restoring a GP-7, or TBW transmitter in which case the value can be interesting.

From: Dave Werner <w2qa@execpc.com>
Message-ID: <6srv25$mk2@newsops.execpc.com>
Source record: 99674

Atlas 210X-LE Solid State HF Transceiver

This is a genuine "Limited Edition" 210X. These were the last ones produced and featured a higher power output and RIT. They were all black and definitely the best looking of the Atlas rigs.

This one is in really clean condition. It was always used in its matching (very rare, all black) power supply/speaker console. It was never used mobile. It is complete, has the noise blanker and the vox circuitry. You will almost certainly not find a cleaner one.

This is a wonderful rig for an Atlas collector or, for that matter, a new (or old) ham looking for a relatively inexpensive way to get on the air while owning a rig that will maintain its value or even appreciate in value.

I am asking only $275 for the complete setup with UPS ground shipping (in the continental US) included!

Thanks,
Dave

From the Drake List Reflector:

The nail color to get is called "Peacock Blue". Unbelievably, it is apparently a more-or-less standard color since I bought mine ~3 years ago in some beauty supply store in CA and saw some as recently as yesterday in Virginia, at a chain called Sally Beauty Supply. (It's my wife and daughter that go to these places, guys, I just tag along. Got that? I-just-tag-along.) Seriously, I think I've seen this stuff at Wal-Mart, etc. Really not hard to find, I don't think. It works well, in my experience. My fear was the bulb temp would discolor the nail polish. Not so yet. Again, this little trick works best *with* the existing clear blue filter, not in place of. It is kind of an equivalent fix to removing and reorienting the blue filter, placing the bleached out spot in another, less noticeable position. FYI, I think Drake still has original clear blue filters available if anyone wants to go that route. In my case, use of this nail polish trick, seen in QST years ago, yields a rich Drake blue hue to the dial and meter, maybe ever so slightly darker than original, but very very nice looking. I've done my R-4C but not the T-4XC yet and the difference is quite noticeable. Good luck.

From the Drake List Reflector:

I had no ideas there were so many suppliers and shades of fingernail polish - about 8-10 racks. My wife helped, and she found it, but what a search, at only one drugstore (Eckerd's). # 163 Peacock Blue, made by Artmatic. The TR-4 dial filter was not badly faded, one coat on the bulb looked good - I tried 2, but was too dark. The S-meter looks to have no blue filter, so 2 coats look good there.

From the Drake List Reflector:

I have found the best method for blue lighting is to coat the bulbs with #30
Light Blue "stained glass" enamel, made by Dekka. This stuff can also be used
for making custom colored bulbs of any color for stereo receivers, etc. It is
made specifically to coat glass for light transmission, and appears to hold up
well at high temps. It is available commonly at art and craft supply stores.

1855. HICKOK TV-7 PARTS, ACCESORIES WANTED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-05 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <1998090522002000.SAA12357@ladder01.news.aol.com>
Source record: 99686

Hello, I need the following for the TV-7 D/U, priced fairly:

A complete, dentless case including latches, all rivets intact and handle,
OR, all latches and the handle assembly for one unit.

The plate/grid cap wire with the connectors (need three)

the RED and BLACK plastic jack screw-ons (where the plate/grid connects)

Three spare GAS/SHORTS neon bulbs

OLD stock # 81 six-volt bulbs

any socket savers or the adapters

NOS or clean tube chart book

Any obsolete or extra tube test setup data sheets

Operation manual, will consider a depot manual if the price is right.

Schematic and or components layout sheet

Do these testers lose any appeal or value if the case is repainted? What is the
proper color/paint type for the gray case, if appropriate?
What about the lettering on the outside?

Thank you,
Joe Pratt, Tubecntral@aol.com

Hello All,

Today I found some more fleamarket treasures. Well I thought the stuff I found was interesting.

First thing is a Sony Micro TV, model 5-303 W, it has a 5 inch screen, on the back it says 25 transistors, 20 Diodes and 3 HV rectifiers. Is complete with Carrying case, Sony Earphones, Ext. Antenna adapter and a pair of fuses. I was wondering about the year of mfg. and if there is any value to it, it looks pretty neat.

Second thing is a Hallicrafters Skybuddy Send/Receiver, I think it is an old Hamradio, took me all afternoon to clean it up but it looks pretty good now, I still have to work underneath the chassis but there it looks good as well. Was also wondering about year of mfg. and other info, also if this is worth something!

Please e-mail me directly if you can help!

I appreciate it!!

Regards,

Rian

1860. Reward Offred For Stromberg-Carlson Mod. 74 Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC
From: J & E Communications <triodes@sprintmail.com>
Message-ID: <35F2CCEE.4AB41115@sprintmail.com>
Source record: 99492

Substantial finders fee paid for whereabouts of Model 74
Stromberg-Carlson huge console, with plywood acoustic labyrinth. Has
door cabinets on both sides of front middle cabinet, and phono in
middle. Has small lift door on top of cabinet to allow peek at dial.
This is a serious request.

Best regards,
John England

1861. Trade Transceiver for Receiver?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC
From: brokebob@aol.com
Message-ID: <1998090618123100.OAA27700@ladder03.news.aol.com>
Source record: 99493

I have an HW-101 Transceiver that I have gone through and aligned/repaired as necessary. It is in very good physical shape and comes with the HP 23 power supply. I do not have a high output mic but checks OK with a low output mike if I yell loud enough.

I would like to trade for a good CW receiver that is stable and has a good crystal filter. One of the many Hallicrafters SX-??? series would work but it does need to be general coverage with calibrated bandspread.

If you have any ideas please e-mail to:

brokebob@aol.com

Hello Christer,

The -05 normally means a Collins mechanical filter
with a bandwidth of 500 hz at -6 db. so this would
be a cw filter.

1874. Question Hammarlund SP-60

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC
From: k5vnu@lunatic.com
Message-ID: <17496.689.uupcb@lunatic.com>
Source record: 99506

Christer, the specs of the mech filter is probably around 3.2khz symetrical passband; but the adapter is simply that and the filters, which might be mounted in it could be any of the product line that had the appropriate center pass freq. Collins mech filters generaly had part number endingss (dash numbers), which indicated their nominal passband. Symtric, lsp, usb could only be determined by ref to the appropriae spec sheets. Any filter installed in the adapter and working per it's specs would be an improvment over the selectivity characteristics of the unmoified SP-600 which did have a Xtal peaking filter, but was really designed for AM reception. It is possible that the filter installed in your unit was for RTTY operations, as many of the radios were used in such service, but usually those also had a modified if section which brought the avc and other signals out to the rear of the radio's chassis to interface with external rtty demodulators.

Must be a sign of incipient Alzheimers!

Got out the old TS-520, blew the dust off, got a new set of finals
and put up an antenna. Then I found that the users manual had not
made the last move (or is still packed up in some of the less interesting
brown boxes.

Bottom line: Ive been fooling around with QRPs and no-tune transistor
rigs and I can not remember the tuneup sequence or parameters for this
good ole tube set. Can anyone out there give me the steps/parameters?

If possible, please fire it back via email.

Thanks es 73!

why not put it in the negative return? that way, you can avoid the high
voltage insulation requirement.

btw, you bought those transco relays from me... do they work out for you?

Message-ID: <35F33C44.29BD45A5@theriver.com>
Source record: 99518

Just got a BC-348R brought back to life. Seems to be a well-built radio. However any movement on the RF deck near the HFO causes frequency drift. Not a lot, but enough so that the signal may get shifted out of range. Any BC-348 owners who can verify if this is normal?

Also, the audio output seems low to me. I'm using the original 4K ohm tap to a suitable speaker transformer to drive an 8 inch speaker It would be nice to have a little more audio output. Does anyone have suggestions on a 'clean' modification to up the audio?

I have lots of trade goodies.
Let me know what you need ham/military/tube.

--WANT LIST--
Military Infantry Radio Stuff:
For the BC-659/PE-120 I need
AN-29 antenna, manuals and accessories.

Any BC-611 or BC-721 radios.

BC-474 radio and accessories.

For the BC-611-C, BC-611-F and BC-721
I need manuals and accessories.

Looking for a complete/excellent
US-issue SCR-300 with all accessories.

Aircraft Stuff:
ATB and ATD transmitters in unmodified condition.

"ARC-5" type equipment:
Any radio or accessory marked
SIGNAL CORPS US ARMY
and AIRCRAFT RADIO CORP.

T-15, T-16, T-89, T-90 transmitters.
R-112, R-113 receivers.
Any receiver or transmitter factory/depot for
over 9 MCs other then the T-23/R-28.
BC-942 receiver (looks just like an R-28).
Any unit factory-built for 12-14 VDC.
Any unit factory-marked in non-English languages.
Any connectors and shock mounts.
Any control head for ARA other then 3-receiver.
Any shock mount for ATA or ARA.
Anything at all for RAT or RAV.
AN/ARC-5 control box types C-24, C-25, C-26,
C-27, C-29, C-39, C-43, J-17, J-28, J-34.
External tuner TU-6.
Interested in anything unusual or low-production
for the ARC-5/SCR-274N families.

SCR-xx-183 Equipment.
Prefer Aircraft Radio Corp make
(I have SCR-xx-283, SCR-274, GF/RU and ARC-5 to trade):

BC-xx-232 transmitter control box.
Junction Box TM-AH-172.
Antenna Switching Relay BC-xx-198.
Any coil set for receiver BC-xx-229.
Any coil set for transmitter BC-xx-230.
Tuning dials MC-372 and MC-390.
Connectors PL-61, PL-62, PL-63, PL-64, PL-77, PL-104.
BD-AS-83 Dynamotor supply.

ARC-type-12 control heads--
C-14 which runs the early R-13 (black wrinkle paint).
C-15 which controls the ARC-type-17 set (painted grey).

TCS:
Need TCS-13 remote control and antenna tuning unit.

Joslyn must still be in business. They have a Site on the internet. I
have EMailed for the specifications but they have never returned any
information. Going on three weeks now. Thanks for the reply. Jim

1902. WTB: Bar Knob for National NC-81X Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC
From: macve3gro@aol.com
Message-ID: <1998090602450700.WAA15668@ladder01.news.aol.com>
Source record: 99607

This knob is similar to the rectanglar bar knobs used on later NCs, HROs etc., except 1) that it is almost khaki in colour, and 2) when looking at the profile of the knob, the round flared part that encircles the shaft is right at the bottom of the knob instead of 1/4 inch up. The same knobs were probably used on the NC-80 and other 1937-38 vintage Nationals. One with a sharp pointer on it would be the correct one for the selectivity control on the 81X. Anyone have a junker out there with a knob like this, or know of someone who could make a reproduction at a reasonable price? Many thanks for reading, and for any info.

I have for sale a Hallicrafters SX-101 Mark 3. This one is a great example of Hallicraftersï¿½ first receiver produced to exclusively cover the Ham bands. Covers 160 thru 10 meters, 14 tubes, dual conversion, crystal calibrator, S-meter, selectable sideband, ANL, BFO, and Notch filter. This SX-101 MARK 3 is in beautiful cosmetic and operational condition, chassis is very clean. Less than normal top scratches, faceplate is beautiful. Tuning knob has two small chips in the outer rim, otherwise, front panel appearance is near perfect. Overall, I rate 9.5+. With original ownerï¿½s manual. This receiver is very heavy, approximately 75 pounds. Guaranteed not DOA, otherwise sold "as-is". No warranty implied.

1908. Re: hygain galaxy t-550?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <35F24D34.9C3FAFF1@calweb.com>
Source record: 99613

Hi Mike,
I have a few of the Galaxy rigs including the GT550 radio. I think they are a first class little radio when properly aligned. The VFO is quite stable and as you noted, they will put our a fair amount of power and the 6LB6 finals are still out there if you zap them. The Galaxy/Highgain gear used fairly nice parts in their design such as nice ceramic coil form in the final, real transmitting grade variable capacitors in the RF circuits, and a simple but functional front panel layout. They are no frill radios and some would say the pre GT550 units were ugly ducklings with the offset frequency dial, but they did and continue to work quite nicely. Vox and calibrator were accessories and only one filter was available (they did offer an add on audio filter I believe).
While there is nothing magic in the design, they did go to the trouble to use a vfo and crystal controlled heterodyne system on all applicable bands which made for excellent VFO stability (unlike my good ole Swan that has a different VFO range for each band and drifts like...well we all know that story). Good break-in CW is somewhat problematic, but cw is possible. AGC is kind of poppy at times, but receiver overload is rarely a problem. Alignment can be a major headache as some of the small RF coils and others have as many as 3 different frequency ranges wound on the same flimsy paper form and you have to develop a touch to ensure that your diddle stick is grabbing the proper slug when you tweak the rascals. Just follow the instructions in the book and don't rush is my advice.
Depending on the price, the Galaxy gear is probably a real boat anchor bargain, but that's just my opinion...I have been wrong before.

1914. Swan 600R information Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC
From: oldgear@aol.com
Message-ID: <1998090613361001.JAA29531@ladder03.news.aol.com>
Source record: 99619

Hi
I am looking for someone who may have a schmatic to ID the IC used in the Swan 600R.
The IC is on the notch filter circuit. It is located on a small board just below the S meter. Not sure if this is the original one, but the number on is is FX-60. This may be a later revision or add on. What it does is narrow the SSB frequency.
If you have the rig let me know the chip number on yours.
Thanks
EJ

Please email info to me, would also be interested in where a replacement could be purchased.

Thanks
EJ

1915. FS: Glowbug power supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC

FOR SALE:
115V AC POWER SUPPLY for tube radios. Suitable for 50-90 watt class of transmitter or receiver. Also suitable for tube audio amplifiers. Each HV output has Double choke filter, with nice Thordarson iron T-6405, T-6409 etc. Tubes: 5Z3, 5Y3 and VR-90.
600V @ 150mA max.
90V @ 15mA regulated
5V and 6V filament windings available (not sure of ratings)
Will supply schematic.
Nice gray painted chassis. Shipping weight 35 pounds
Will sell for $25.00

Please do not send me ANY SPAM!

1921. 575A rectifiers FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-06 00:00:00 UTC
From: napoli@i-2000.com
Message-ID: <35f4a550.3249652@news.i-2000.com>
Source record: 99626

I have two 575A rectifiers Sylvania, that came from a defunct AM
station I was helping clean out--they are obviously new, with the
original packing and the original boxes..they we're spares for the
stations Collins 20V2(long sold)...The only problem with these tubes
is that the glass envelope, and the metal bases have come apart. It
is obvious both visually, and with an ohmeter that the filaments are
intact, and that the base and envelope have to be glued, with whatever
kind of magic glue that's used for such things.
I GUARANTEE these tubes to be as represented, or I'll gladly refund
your purchase price...I'll even throw in an additional pair of 575A,
which we're obviously pulls from the 20V2..don't know anything about
there condition....$50.00 + shp Bob K2LGO
Pse remove the (ns) from my adr Thanks.....

1922. B&W 370-12 Multi Band Traps FS

Message-ID: <13001-35F2AC3D-26@newsd-163.iap.bryant.webtv.net>
Source record: 99632

Pretty simple. Just hooked up a 12volt DC relay (coil) to your Kenwood and use the contact arms of the relay to key the 1200X. You can get these anywhere... including Radio Shack.

1200X is a pretty good amp for the price but a couple of cautions...

1) The SWR edge meter is not that accurate. You should get a better meter like the WM-2000. It reads both average and peak output.

2) Keep transmissions under 2 minutes. Those 6LQ6's get hot fast. If you see them start to turn cherry red... let off the mike..

3) Keep full power tuneups under 10 seconds.

4) ALC doesn't work on a lot of SState radios. Not enough drive. Many mods for the board on the 1200X but I recommend you just lower mike gain to acceptable level. It's easy to make this amp splatter and I'll bet you have already found this out...

5) Circuit is unique in that if a tube goes bad, you can remove it and still use the remaining three. (It happend to me during field day)

I have both a 1200X and a 1200W. Nice, but after awhile, you'll discover that most times you really don't need an amp if the band is open.

I have for sale a very good condition Electro-Voice model 729SR ceramic cardioid mic. It is complete with the desk stand and the threaded adapter. This is the tall thin mic. often shown with '60's gear. This model includes the PTT switch, and is in the original box with all original literature. The only thing which keeps it from being perfect is that the small (less than 1/4" dia) E/V symbol is missing from the screen. Price $35., plus $3. postage.

Body handling: HTML body converted to readable text

Very simple. It has been asked repeatedly to please place reference to either E-bay or auction in the header so folks know whether it is "for sale" or auction.

In this instance, once again, it is marked "FS" when it indeed is not.

Source record: 99446

I just bought one of these in excellent condition for $2 at a sale. I hooked it up last night and tried to check it out with my HP freq. counter. It works great and seems pretty stable except (for example) below a certain point in it's range. I measure steady stable signals on the 10 mhz to 32 mhz from 17 on up to 32 however I seem to loose all signal output below 17 ??? Same on some other ranges. Could anyone let me know what may be wrong ? Or does the rf output fall off to a point where my HP counter isn't picking it up ?

1941. Re: BC-348 stability

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-07 00:00:00 UTC
From: Dave Hills <dhills@onramp.net>
Message-ID: <35F3FE60.929F0926@onramp.net>
Source record: 99447

My BC-348Q is stable as a rock unless you place your finger very close (.5 inch) to the converter tube, then you can "tune" it quite a bit by just moving your finger around. (The oscillator tube was a 6SA7GT. Replacing it with the specified 6SA7 metal tube put an end to this.)

Mine also had very weak audio even with a proper speaker matching transformer and a high efficiency communications type speaker. (Stereo speakers cheap or otherwise are usually too inefficient for a reasonable volume level.)
My weak audio problem turned out to be several bad components. First, I discovered a "very" leaky plate to grid coupling capacitor at the converter's RF grid. (+50vdc on the grid and the thing still worked well enough to pick up WWV). I later determined all the plate to grid coupling caps in the RF section had some leakage and as each was replaced the audio improved. This took quite a bit of troubleshooting to ferret out as the caps measured OK, however replacement provided a marked performance improvement. (These are molded ceramic or mica caps in my unit, and these problems were found after all the paper caps in the IF and audio sections had been replaced.)

The receiver's sensitivity is still not up to spec.'s, although it's within 6 dB or so. I suspect some or all the other caps in the RF deck may be leaky also. Leaky caps will lower the tuned circuits "Q" and therefore the RF stage gain to some degree. Since all the tubes are new and multiple substitutions make no difference, I believe the leaky cap theory explains the remaining slight sensitivity loss.

A word of caution, some of the Oscillator tuning and trim caps are temperature compensating types and replacing them could cause you drift problems unless you can find appropriate temperature compensated replacements.

Also, the 6SA7 oscillator tube was very weak and had to be replaced. I imagine the +50vdc on the signal grid did it no good.

I have a Heathkit SB-10 SSB adapter that has a blown resistor that is wired to the top of the internal relay. Most of it is gone, and there is no way to determine the value of it.
If someone has a schematic of this unit and would look it up for me, I would be very greatful. I want to sell this unit, but, connot do so until I determine why th resistor blew out.

Thank you.

Please e-mail me if you can help. w3ivg@prolog.net

From: Ed Juge <ed@juge.com>
Message-ID: <35f41144.0@oracle.zianet.com>
Source record: 99453

I have for sale a beautiful, super-clean, round-emblem 75S-3B in CCA:Exe condition. The only blemish I can see is a small scratch, not through the paint, about 3/4" long, on the back edge of the top cover. (If the light isn't right, you don't see it.) S/N is 302xx - MCN 3272. Most of the cans are dated 11/70.

This unit has the covers over the filters (above and below) and the T9 transformer. It includes the original manual.

Operation appears to be perfect. Front panel is perfect. Chassis and the underside are extremely clean and I can't find one place where a soldering iron has ever touched it. Paint is original.

I'm a "user" rather than a "collector." I found, and "upgraded" to, an equally clean S-3C. Much as I hate to part with it, this one is excess to my needs. I paid $750 plus shipping for it in May of this year, from N4JL. (Feel free to ask him about it.) I want $750 plus shipping (from zipcode 88345) for it now.

1948. Re: BC-348 stability

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-07 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <35F41D59.1345@ix.netcom.com>
Source record: 99454

Question concerned low audio output and freq shift in a
BC-348-R. Copied to the list for general information. d.s.

Hi Jack!

The frequency shifting is likely a sticky backlash
gear. The gear on the end of the tuning cap is
composed of two cogs tensioned by a spring. The
two cogs can get stuck or the spring can loose it's
tension. Get this system working and the jumps
should stop.

On the audio-- I have several BC-348s and have worked
on many more. The audio on all of them will run
you out of a room and the quality is excellent when
used unmodified according to the original design.
Low audio in these rigs usually results from one
or more of these:

1. Improper B-voltage supply.
2. Misalignment.
3. Speaker mismatch.

Let's look at each one.

1. B+, B- supply.
The B-supply negative is NOT returned to ground
in a BC-348. In the "R" model it is returned
through choke 123-B. Two resistors in series
with a bypass cap at their junction leave the
ungrounded end of the choke and provide negative
grid bias to the 6K6 output. The 6K6 should
be pentode-connected, as in the original design.
Please do not change the output transformer.
The original transformer is very high quality
and only needs to be treated correctly.

If your output stage was run without grid bias
in the past then the tube, transformer, screen-grid
resistor etc. are likely candidates for damage.
Check operating voltages at the 6K6 tube socket.
Disconnect speaker, antenna and ground.
Turn the volume to max. Use MVC position.
Referenced to chassis ground, voltages should be:
Pin 1: 0V
Pin 2: Heater (+28 volts in unmodified unit)

Pin 3: 200VDC (plate)
Pin 4: 210 VDC (screen)
Pin 5: -8 b
Pin 6: n/a
Pin 7: Heater (+20 VDC in unmodified unit)
Pin 8: 0V (cathode)
If you believe you have fried windings in the
output transformer, let me know. I have spares.

2. Misalignment.
People would be surprised to know how many
receivers sound bad for no other reason then
serious misalignment. Many hams simply crank
on the IF cans for max speaker noise, then
twist the RF/Mixer caps the same way.
This can lead to serious problems with
bandwidth, sensistivity etc.
The alignment procedures aren't tough but
they do need to be done correctly.
I strongly recommend getting a copy of the
AN/ARR-11 (BC-348 in 1949) procedures
from Fair Radio or W7FG (1-800-807-6146).
This will help any BC-348.

3. Speaker Mismatch.
Any receiver is only as good as it's speaker.
There are two taps on the 348 output transformer-
300 ohms and 4000 ohms. Match properly using a
good quality transformer to a good quality speaker.

These three steps will solve most low-audio problems
in a BC-348. Best of luck with it!

This reminds me - I too have an HQ-129X which works ok, except that when I ground it (either to the house ground or a separate 3-rod RF ground system I built) while the set is on, I see a nice fat spark. Measuring the ac voltage with a wavetek dmm shows close to 60 volts ac. The current is in the tens of milliamps, and hasn't changed much over time. Part of me thinks it must be due to an ac voltage divider formed by the two caps from line to ground, but it still seems odd to me to think there's any current flowing to ground during normal operation.

Any info appreciated,

73,

Some good suggestions here! Beginning to suspect part of the oscillator stability problem is due to dirty bearings/contacts on the main tuning capacitor as the rx also jumps frequency slightly when tuning in a signal. The 'R' version uses a 6C5 oscillator and it appears digging into the bandswitchs for cleaning their contacts will be a major chore. Though I did make major improvements in performance by spraying the general area with 'dry clean' contact cleaner. This is a modern product but it doesn't say what the ingredients are. Any suggestions amongst the BA group as to the brand of a preferred cleaner?

One person suggested the lack of audio could be overcome by using a radio shack speaker/amplifier plugged into the head phone output. This approach certainly has merit and probably would also be a useful service bench item as well.

I'm lacking a schematic for the 'R' version. I do have the 3rd edition of the 'Surplus Radio Conversion Manual' which includes a 'close' diagram. Just out of curiosity, does anyone know why the 'J', 'N' and 'Q' versions used single-ended tubes whereas supposedly the later version 'R' reverted back to double-ended tubes?

Pretty simple. Just hooked up a 12volt DC relay (coil) to your Kenwood
and use the contact arms of the relay to key the 1200X. You can get
these anywhere... including Radio Shack.

1200X is a pretty good amp for the price but a couple of cautions...

1) The SWR edge meter is not that accurate. You should get a better
meter like the WM-2000. It reads both average and peak output.

Hello Jack and Others:

I have had excellent results with a product called "Deoxit" made by CAIG Chemicals and although it is somewhat expensive when compared to a few other products, it does the job, and yu do it once, then forget it...unless the component is really ready for replacement.

There is another product with a similar name, ...can't remeber what it is...and it has confused a few people, causing them to buy the wrong one, with less satisfactory results.

I believe that Antique Electronic Supply can mail order it to you if you can't find it locally. You'll have to use your search engine to find the website for AES.
Cheers,
Lee Smith

Tens of mA is very dangerous current for AC line leakage.

Check the AC line bypass capacitors, they are probably
older wax paper units and are leaky. They should be replaced
with .01 mfd capacitors that are rated for AC line service bypassing.
DigiKey sells Panasonic disk caps for AC linebypassing, they are
marked with UL and other worldwide safety approval markings.

Worst case scenario would be leakage in the power transformer itself,
due to moisture from being stored in a very damp place for eons.

1963. FS: Drake L4B with P/S and Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-07 00:00:00 UTC
From: dave@boatanchors.com
Message-ID: <6t1oh7$83g$1@nnrp1.dejanews.com>
Source record: 99469

Hello all,

I have for sale a Drake L4B with matching power supply
and cables that I purchased in March from the original
owner here in the Tacoma, WA area. It has S/N 927,
and is in good condition. His callsign is ingraved in the
upper right of the front panel in small letters, and there
are a few smudges from where he had Dymo labels,
and I have not taken any time whatsoever to do any
cleaning. It was removed from working service, and
according to the seller in March, has fresh tubes. I
have the original manual as well.

I have NOT had it on the air - it is wired for 220 and my
shack is not. Now I am getting divorced and I need the
cash back out of it if possible, and I have no way of
putting it on the air.

Price is what I paid in March - $625 LOCAL PICKUP.
I am NOT able to ship it. My QTH is Tacoma, WA -
just south of Seattle.

Thanks,

Dave WB7AWK

Well, Honneycutt, you stirred up a storm playing both ends against the middleman; for sale & for auction simultaneously.

I remember the 101 when it first appeared on the market...a fine product for the time.

However, I would not buy from you for a different reason. You praise the wonderful qualities of the "9.5+" rig like a starving used car salesman...then, in the last line comes the "not DOA", "as is", "no warranty implied" fine print. {...if you would like a job selling used cars, let me know, no problemo!}

Why do people insist on advertising items here that are *not*
"For Sale", but instead are actually "For Auction"?
Why not simply sell the item here as "For Sale, Best Offer"?
That way, anyone with interest in the item has a fair chance
to buy it, and the seller can accept the highest offer, if
acceptable to him. Such "For Sale" ads here (when the item
is actually "For Auction" on eBay) seem somewhat deceptive.

> I remember the 101 when it first appeared on the market...

> {...if you would like a job selling used cars, let me know, no problemo!}
>
> Bob, w6lac

That "last line" was puzzling. If that particular SX-101 is as nice
as the ad leads one to believe...IF it's really a "9.5", then *why not*
warranty to the buyer that it is as described? I agree with you, Bob;
I would not buy any item from anyone who advertises using such deceptive
"bait and switch" tactics, ultimately saying "Not DOA on arrival" and
"no warranty implied". That tells me (right or wrong) it may not really
be a "9.5" afterall...or perhaps my idea of "9.5" is quite different from
that of the seller.

It either is, or it isn't in the condition described.
Doesn't matter much, tho, since it isn't "For Sale" anyway!

Looking back, did we ground the metal shell of the 6L6 or let it float? I remember
getting some nice shocks from those tubes when it was connected to the B+.
We had a TPTG one tuber (choke modulated) that covered most of Hollywood on the BC band
in the early 1950's.

Just a note...

Thanks to everyone that helped earlier.

The original estate sale bargain reciever is now working very well
(despite an incorrect tube -- gotta fix that) and a poor antenna, but now
I am somewhat worried... I replaced the bypass caps with new 600v orange
drops of the same rating (.05 i think) This is OK, right?

Have a very very nice HW-101 with HP-23 and 400 hz filter. Works great and is on the air daily. Overhauled by RTO electronics in 1991 by previous owner. Orig. manual.

Also have a just as nice HA-10 Warrior amp. This was featured in the November 1997 issue of CQ. In that issue they added 160 meters, a T/R relay and made a few other mods. Only mods it has is solid state recifiers (no holes drilled) and it is set up using a quad of 572Bs. Puts out 900 watts with 100 watts of drive. Ep is 1650vdc unloaded and drops to 1450 vdc fully loaded. Uses a choke input dc supply. Runs off of 120 vac only. A very stiff and well built supply. This amp was originally designed to run (4) 811As.

I would like to trade these items for a Drake B or C line. I can ship but we will have to work it out because the amp is as heavy as my mother in law. I am in San Diego. I can meet you within 2 hours of here or if you are able to you could come to my QTH for a test drive.

Jack,
The frequency change does not sound normal. The early BC348's had a seperate osc. with a gas regulator. Later, the gas tube was removed. What vintage is yours?
The audio was made to work headphones. On one model, I removed the original transformer and installed a regular single output to speaker type. Seemed to help. Check the 6V6, is it in triode mode? If so, add a screen supply. Check the 6V6 for the cathode resistor. Could be un-bypassed. If so, bypass with a 10 uF of more.
I have a number of BC348's. Nice rigs. Also have a unmodified one that works on 28 Volts only. Just like those new fangled solid state rigs!

Marc

It is a complicated story.

Don is assuming that because a pointer to E-bay is being
used that the set is not For Sale but is For Auction.

The original seller is assuming that because he had
the thing on auction that the information and photo will
remain there forever.

Neither is correct.

Brian,
He's referring to the way the message was posted as "for sale", when it's actually up for auction on e-bay. Many people (including myself) feel that this is improper etiquette, since it misleads the reader into thinking that the sale is a, for lack of better words, regular sale, when the item is actually up for auction. Some folks don't care to engage in the online auction process, and would rather negotiate a private sale with out the influence of outside bidders.
Personally, I think that Mr. Honeycutt should have mentioned in his message somewhere, preferably in the title, that the item was being sold via auction. He didn't mention that anywhere, the only reference was the link to the E-bay URL.
I think that many would agree that there's nothing wrong with soliciting bids for E-bay items via Usenet, as long as the seller presents his posts accordingly.

I'll try to expain this again. The radio is
FOR SALE. It WAS on Ebay several
weeks ago, but didn't sell. The gentleman
is using the OLD ebay address to show
a PHOTO of the unit. The auction is long
closed with NO BUYER. The radio is
being sold on the open market, it is
for sale, not auctioned. If anyone bothered
to check, the ebay address is no longer
valid. I follow most Hallicrafter auctions
on Ebay since I collect Hallicrafter sets.

Joe:

You can get the #81 bulbs as well as the NE-45 neon bulbs from Antique Electronics Supply (AES). They aren't cheap, but they do have them. AES also has a good copies of the Test Data Book for the TV-7. Don't waste your money on the Operator's and Organizational Maintenance Manual from AES. It doesn't really have much data despite its name. Get the Field and Depot Maintenance Manual from Fair Radio Sales. It's called TM 11-6625-274-35 and contains full schematics, parts layout, calibration data, and much more. I got mine from Fair Radio several years ago (1992?) for about $10, it may be more now. This manual is essential for serious work on the TV-7 series testers. Fair Radio and AES also have socket savers available from time-to-time. Fair Radio may have some of the other TV-7 parts you need, contact them at <fairadio@wcoil.com>.

Best Regards,

Ed

>for two years trying to get it to work.

Verygood point, Terry. I was a teacher in 1975-78 and had one of my students try
to build an HR-1680 receiver kit from Heath.
We never did get it to work at all, even after spending many hours on it.

It struck me as being very much a piece of junk and not up to the high standards

opf the eralier Heath gear like the SB-101 etc. Maybe they just had trouble with
the transition to solid state.

>Also, how could an SB-104 compete with an FT-101E selling about the same
>or even less money, and already to use. Appliance maybe but $729 was alot
>of money to a new ham wanting his first new rig and wanting to work the
>DX on 20 meters every night.

Precisely! I had an FT-101E and would not have considered a Heath rig of
that era as coming anywhere close in performance.

In the 1960s the Heath Kits were a great way to get on the air with inexpensive
radio equipment, but later it was hard for them to compete, and I think they
lost their market share. It was not all caused by accountants, but rather, a lot
of it had to do with market forces and technological developments overseas!

>Same story for the TS-520, TR4 or maybe
> even the Tempo 2020.

Well, they were not as ggod in my opinion. The TS-520 maybe, but the Drake was
still mostly like a tube rig. Not as good as the 101E in some ways. The Tempo
2020 was a piece of moderate quality and did not sell well.

>Heathkit with a kit that took months to build for
>the same price or even more just couldn't compete.

Yes, they began to cost MORE to buy than finished radios of top quality!

The motivation to save money was no longer there for entry level hams.

>And if you ever want to hear horror stories read about the last Heathkit
>transceivers they put out in the Heathkit book. To complicated for most
>kit builders (read having to send them to the factory to get them to work).
>What was the model number, SB1400 or something like that. Not something
>I pay much attention to now in my hamfest buying and collecting.

I thought they just sold that as a finished product (made by Yaesu wasn't it?)

>There was a time when an HW-101 or SB-101 sold for a couple hundred dollars
>less than a new Drake or Yaesu or Kenwood and it made sense to build your

>out of the
>market. If back in 1976 they had been selling a good SB-104A for $500 or so
>things might have been different, but who is going to buy a headace if they
>can avoid it.

Yes, that would have been their last chance. I think maybe they over-engineered
the SB104 and tried to get too fancy. I didn't like the "styling" of that later
equipment, but what could they do? In the 1960s the green boxes were "cute" -
but by the 19700s and 80s the color just looked plain awful to me!

Give me a "JONXTON" any day!

Hello Mike

As long as the chassis is grounded with a three wire cord
you should get by with the 600 volt Orange Drops. But, remember
that is a DC rating for the caps, not AC working volts! Those
caps are good for about 250VAC. To be very picky, I believe
UL allows a maximum of .01 ufd for line bypassing.

I am very conservative, and use 3000 volt rated AC line bypass
disc caps that are UL approved.

The grounded AC line cord is protecting you, so I wouldn't lose
any sleep at this point. I know of several radio restorers who use
600 volt caps regularly for line bypassing, and they haven't had
problems. But like I said, I am conservative.

Peter

> I am looking for a 4 KV+ @ 1 Amp around 8 Hy choke. Anyone help?

Yeah, put the choke in the negative line so you don't need the 4KV+ insulation. Alternatively, place the choke on insulators of sufficient quality and separation so that it won't arc over.

A friend used this trick to milk a few more months' use out of a partially shorted modulation transformer for a 5 KW AM broadcast station. He basically unscrewed the transformer and slid a board between the transformer and the chassis.

What can I say, it was a college station and they could afford a board but not a transformer or an FCC-licensed engineer.

Jim N6OTQ FWIW, recall the difference between a transformer and a choke -- the secondary.

That could be the case. FWIW, on my SG-8, when I brought it out from years of disuse, there were metalic 'dendrites' growing on the tuning capacitor that shorted the plates together below a certain setting. This naturally killed any output below that point. Carefully running a folded paper towel between each pair of plates with the cap fully open cleaned them all out, and no problems since (3 years). BTW there were sparks as the cap was tuned down to the problem area, since the cap has fairly high voltage across it in the SG-8.

Antique Electronic Supply stocks a 600:8 Hammond. Part number is
P-T119DA and its around $17. This is a high quality transformer,
designed by Hammond specifically for the Collins R-390 crazies :-)

I can only speak from my own experiences. In 1974 when I got my Novice
license, there were about a dozen other novices in my home town. Almost all
of them used some form of wire antenna (dipole, inverted vee, etc). Nowdays
I don't hear new hams even mentioning it.

But the remainder of my post was of an optomistic tone. I don't find amateur
radio a floundering hobby and I find a lot of room for experimentation. Plus
I just simply enjoy getting on the air, on HF, sattelite, or the local
repeater.

2029. Sherwood SD-5K replacement filter for the Drake SW4-A and SPR4, and MS-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-08 00:00:00 UTC
From: steven.e.huss@tek.com
Message-ID: <steven.e.huss.198.00D29093@tek.com>
Source record: 99568

Sherwood SD-5K replacement filter for the Drake SW4-A and SPR4

From a 1986 Sherwood catalog:

Replace your 4-pole first I-f filter with the Sherwood 5kHz 8-pole unit

Greatly improved skirt selectivity with modestly reduced -6 db bandwidth.

Compare stock filter to SD-5k/8:

Stock SD-5K/8
-6 db 6.0 kHz 5.0 kHz
-20db 8.3 5.7
-40 12.6 7.2
-60 17.0 9.3

Directly replaces existing filter. No modifications or re-alignment necessary. Puts selectivity up front. Eliminates second mixer overload.

Includes the original installation instructions and shape plot. The filter is a drop in replacement as it uses the same mounting dimensions, but is about 2 inches high.

Filter: $80 + shipping

MS-4: $40 + shipping

AA>I have a plug-in Collins mechanical filter, type # F455B-31. What's it for?

AA>73, Gary Youney K5QT
==========
Asymetrical passband w 455khz injection of carrier. 3.1 khz pass a 6db down..
Believe that was the USB version. Normaly used in pairs with the other
being a 3.1khz down from 455. By asymetrical; the passband does not have
same shape on each side of its center freq. In this case; very steep slope
on the 455khz side, more rolloff on the 3.1 khz higher side. The LSB filter
is opposite in shape factor vs freq.

Source record: 99583

Thanks to all who replied! Dave Stinson pointed us to cleaning the spring-loaded gears on the main tuning. This got rid of the frequency jumping as we tuned in a CW signal, as well as greatly improving the overall stability. His AF output tube voltage listings led us to discovering our filaments are only getting 4.8 VAC on them. Suspect this is impacting the AF output level. Turns out whoever installed the AC power supply tied the 6.2 and 5.0 volt windings together in order to feed '12V' to the serriesed filament strings. These windings are only rated at 2 amps which is about 1/2 amp less than what the tubes require and undoubtedly is the cause for the voltage droop.

These were used as final amplifiers and modulators in vintage commercial and military transmitters. They are somewhat long-lived and capable of a fair amount of abuse. As replacement tubes, the market is quite limited. I have one here as a decoration.

See the November 97 issue of CQ for details on adding 160 and other mods. This one looks super nice and is using (4) 572Bs for 900 watts out. Ep is only 1650 vdc (stock xmfr) so not bad pwr out for that voltage. Orig. manual. Shippable via UPS but it will cost a LOT...this thing is really really heavy. If you want is shipped you will pay the shipping costs.

Guaranteed to be as stated or your money refunded. Will trade for a Drake B line or C line.

They tried it both ways. Some folks recommended leaving the shell
unconnected. I think leaving it unconnected increases the interelectrode
capacitances, which may have helped out by increasing the feedback.

Boy, I hate when you post stuff like this! I think I built the xmtr you are thinking of, so off to the magazine shelves and here it is!
Electronics Illustrated, March, 1968. One tube, built on the end of a fruit crate, operated 80m and 40m, and every tv channel in the neighborhood! Design by W5LET, and using a 50C5 or 50L6 tube. You needed a tube socket, but the wiring tie-points were nails driven into the board. Just keep your fingers away from the 350vdc comming out of the voltage doubler! Can you even imagine a major consumer mag. today publishing a circuit that features exposed hv wiring??!

Source record: 99398

I've repaired and used GT-550s and they are good basic radios if they are working right. Their age makes it likely that any one you find will need some repair and alignment unless the previous owner took care of that. The manuals that came with them have some errors in the tube voltage charts, so trouble shooting can take an extra bit of headscratching to see if the stated voltages make sense.

My Dad uses one on a Cushcraft 3-bander and on 20M DX most anything he wants to work comes back within a very few calls, most often the first call unless in a pile-up and it can bust into some of them with the bigger guns. There's only 1/2 S-unit between the 500W and a full "gallon" final.

Hello Steve,
I'm not sure what the model number for this speaker is, but if it
would work with the SX-25, and you would consider shipping the SX-25
and S-76 for $100 each plus shipping, I would offer you $75 and
shipping for the speaker.

Or in other words, has this happened to you?

Several years back, I bought a complete Drake 4C station.
R4C T4CX FS7 AC4 SP4. $600. Not a bad price at the time
for all that stuff together in a single package.

(Funny, when I turned on the FS4, it was sitting on 27 MHz.)

Later, when selling it due to a impending move, I got $200
for the package. Buy high, sell low I always say...(Not by
choice I might add.)

A friend recently pointed me to an auction item on e-bay.
A Drake FS4 with a minimum (I forgot the term) bid of $355.

Good luck. Glad I'm not selling it, I know I'd only get $35.

Note: This is not a rant. Just a perspective on the way my
buying and selling habits run. I was just curious if I was
the *only* one that dealt this way. :-)

73 es GM from Jeff

Hello, world!

I'm looking for the following parts for a Hallicrafters
S-107 general coverage receiver:
- Dial glass
- one of the large knobs (main or bandspread tuning)
- chrome nameplate trim piece that goes below the dial
and has the main and bandspread tuning knob shafts
protruding through it (terrible description - sorry!)

I will buy a complete radio if I have to, but I'd rather
just buy the parts I need to finx up the one I have now.

I'm also looking for a copy of the Owner's Manual, Sams
Photofact folder (if there is one), and any other kind
of literature, magazine ads, and so on. I have a copy
of the factory Service Information manual already.

Thanks and 73!
Dean - K5DH

Hello all!

I am looking for a 0 - 200 millivolt 3 1/2 digit minature digital panel meter to repair an old Hickok 539A tube tester. I am looking for units similar to those manufactured by Martel, Jewell, Modutek, etc. I would like to but one at a very reasonable price. If you can help me out please reply by email to:

srimsa@eclipse.net

steve.rimsa@alliedsignal.com

Many thanks for reading this posting. All replys will be answered.

Give Circuit Specialist Inc. a try.
They have some small units at very reasonable prices.

web http://www.cir.com
Orders:
1-800-811-5203 or
1-602-464-2485

The next two I have no contact information available:

Datel has the most extensive line of digital displays I have
ever seen but they are a little on the expensive side.
If you get stuck trying to locate the right size they might
be an option.

Also check out Red Lion controls.

Jeff, you are asking a logical question. All logic disappears during the bidding on eBay!

While I am sure I could sell items for a lot more than I could ever imagine on eBay, there must be something in me that won't let me do it.

Some argue that this is the free market establishing a new, higher price level. I disagree. The emotion and excitement of bidding at blind auction almost always results in prices higher than would be expected if just the buyers and the the seller were negotiating.

I am opposed to artificially raising equipment prices by believing that the eBay prices represent a "fair market value".

With respect for your position and you're right
to stay away from Ebay; I can't agree, Al.

I am opposed to people attempting to dodge their
personal responsiblity for their own actions
(like bidding at an auction)
by blaming it on "auction fever."
There is not such affliction.
There are only people making free choices
who understand and make good on their decisions,
and those who whine and dodge from their decisions.
Thankfully, those people are few.

The Ebay market is not the traditional market
for ham goods, so it is unreasonable to expect
the two to reflect each other. It is, however,
as valid a market since it has buyers and sellers
who freely agree. That's all a market needs to exist.
The vast majority of Ebay people and
deals are honest and reliable.
No one is forced to make a bid.
That's the bottom line.

Kind Regards,
Dave Stinson AB5S
arc5@ix.netcom.com

I buy and sell there. It is my policy to
make my listings as honest and complete as
I possibly can.

WOW!

I was poking around looking to see if anyone else built this one-tube wonder . . . believe it or not I *STILL* HAVE MINE built on a small piece of pine . . . finishing nails and the 50C5 plus output transformer wound on a wooden spool! . . . if anyone is interested I could probably jot down the parts . . . My interest was to figure out exactly WHEN I built this as I'm thinking about a contact or two for CX . . . by the way I made a couple of very successful contacts with the rig on 80 meters using very available colorburst frequency crystals! (NJ to CT at the time) . . . so my educated guess is I built it in 1978 . . . and as for the HV . . . there were lots of HB rigs that had metal enclosures but were shock hazards at the handkey as all did not use grid-block keying . . .

Hi, Al (and Jeff)...

I somehow dislike ebay and it's concept, too. But, I have sold some stuff through it, and even bought a couple of items. The secret to buying there is not to get caught up in the "feeding frenzy." The secret to selling to a good description and a GOOD photo of the item. Most of the stuff I sold were items I had no idea how to price or even if there was a market. It got 'em off my shelf and recouped a little $$.

Al will appreciate this... I advertised a KWM-2 on the Collins Collectors' reflector for two weeks without a single bite. So, put it on ebay and it brought exactly what I had been asking on the reflector... and, most surprising, it was bought by a serious Collins collector (with over 150 pieces in his collection).

However, Al, compare some of the pricing on the reflector if you think ebay is really bad. I just bought an EV-664 mic in good shape for $45. WA5VVT recently bought three of 'em at a hamfest for $5.00 each. When I asked on the reflector, two guys replied and wanted $210 and $300 (with stand) respectively! Prices vary greatly between "collectors" and "users." You need to take that into consideration.

The bottom line is, Jeff, shop around. Whether you're selling or buying. You can learn to make the best use of the various resources out here in Cyberspace and you can be a happy buyer AND a happy seller, most of the time.

73... Ed, W5EJ

Somehow, Dave, I can't see how you think we disagree!

I did not pass judgement on the people who frequent eBay. As you say, these are people making their own decisions. I happen to think they are sometimes making bad decisions, but indeed they are responsible for them.

I believe that eBay and the "free market" are two different worlds. The "free market value" of an item is defined following negotiations between a buyer and a seller, including competition in an open arena. I don't believe the eBay venue resembles this definition. It is certainly not an "open arena" where free communication occurs and the buyer is allowed to examine the merchandise. It is a sellers' market with a deadline that all are rushing headlong toward in a bidding process. The only free communciation the seller's representation (and sometimes poorly or inaccurately defined description) of what he is selling.

Your position seems to be strongly "Caveat Emptor" - where the seller has little responsibility for the truth, but the buyer can be a victim of his own bad decisions because "he didn't ask the right questions". ...or, as you stated below, "No one is forced to make a bid". LET THE BUYER BEWARE!

We certainly agree by your discusssion below, that these are two separate - and equally valid - areas of buyer/seller relationship.

I still don't believe that the eBay prices represent a "fair market value" - whether they come out too high or too low because of the bidding process.

I agree with you too, Ed.

There are still bargains to be had a Hamfests and in private dealings where the seller probalby doesn't know what the current market value of something is. I always love to find something like that because I go away happy with the "bargain" and the seller goes away happy because he got his asking price! (I'll be happy to give WA5VVT twice what he paid for the EV-664s!!!)

There is a whole different "collector's market" for microphones. My doctor collects them!!! His main interest is in vintage broadcast mikes, but he will buy anything old and different - and people like him are driving up the prices on old microphones.

Of course, in the case of my doctor, somehow I think I wind up paying for his excesses!!!

2081. FORSALE - Kenwood TS-830S, VFO-240

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-09 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <6t6m8p$qqe@nntpb.cb.lucent.com>
Source record: 99426

The Holmdel Amateur Radio club is selling its Kenwood TS-830S
and VFO-240 in order to upgrade our equipment. The equipment is
in excellent condition, and we are the original owners. It's resided
in our shack since we bought it new in the mid-1980s. The
TS-830S also has the optional CW filter installed.

I would like to sell this via a bid process. If you are
interested, please send you bids to me by Friday, Sept.
19. I prefer to sell both pieces as a set, but will
consider seperating them if necessary. All equipment
works perfectly, but we seem to have lost the original
manauls (still have a xerox copy).

Thanks,
For the Holmdel Amateur Radio Club,
Joe Levantino - KB2FSH

Moved and seconded! Really, I have bought an item or two on eBay, but as I have become more savvy as I grow in the BA sector of our hobby, I have come to recognize eBay as an inflation machine. While I paid $225 [+UPS, of course] for a TR-4/MS-4/AC-4 setup in good to very good condition throughout, I was lucky, especially being an impetuous and inexperienced buyer (at the time, hi hi).

I don't know who all these people are buying and selling hollow-state gear on eBay. I saw a truly ludicrous final price of nearly $300 recently for a S-38C ("immaculate" the seller advertised: well, yeah, that one and another 50K or so units). There is a slight extra margin of safety in doing business on eBay, owing to the 'feedback' files, but the real source of the inflation is the "gotta have it NOW!" mentality that belongs more properly to the pursuit of the latest, whiz-bang all-mode DC/daylight KenYaeCom transceiver/computer/coffee pots. That, and the bidstructure on eBay that strongly favors sellers, and of course, eBay itself which gets a percentage of the final price.

A more sane and just system would be to allow only one sealed bid per bidder, period. That would level the playing field, and result in final sales more in line with market value, as calculated buy the design, condition, and rarity of a given item. The real harm in all this is that eBay is probably inflating BA prices off-line, i.e. at hamfests. I hope we come to our senses and when we meet face-to-face, realize the old way really is better. That is what boatanchoring is all about anyway, right?

Rare??? At least I don't see nearly as many as other more common
brand receivers. Covers BC band and from 1.9-30 MC general coverage.
Circa 1959 8 tube receiver. In good condition, has some paint chips
around the bezel, cabinet has some light scratches, front panel and dial
are perfect.
Big problem is that only one of the 7 knobs is an original. The
set is in working condition and has the original back, a copy of the
manual and diagrams are included. $75 + shipping for 25# from 24012.
Thanks, Craig

My own $.02:

I don't think e-bay or any other selling method can truly change the FMV of a "collectable", because for everyone who pays "twice the going rate" for his desired object, someone else bides his time and waits to find it at a better price. The result is just a statistical distribution that changes over time. People sometimes speak of the median as the FMV, which is a misnomer because these are luxury items and no one is forced to buy.

I am concerned, that someone could intentionally misuse e-bay by sending in bogus bids in an effort to induce others to believe that someone, somewhere is willing to pay X for object Y. Is there any mechanism to prevent this? My suggestion is to avoid the assumption that because you saw something bid at for a price you think was rediculous, that an actual transaction would have happened. This goes for other selling venues as well. Even when there is no attemt to deceive, just because someone is asking $500,000 for a KW-1 doesn't mean that anyone is willing to or has paid that much. Or even if they did, they might not be able to resell it for that much.

So, if you really want a particular rig, don't be disheartened by large asking prices. Be cool, wait, and don't be afraid to offer less than what is being asked.

Several years ago, I visited a collector of old receivers. One receiver that I liked, was a Hammarlund. I cannot think of the model number. This was a vaccum tube receiver and one of the last model made by Hammarlund. The cabinet was low profile. I would like to know the model number and some information on this receiver.

2090. need help w/swan 350

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-09 00:00:00 UTC
From: Michael Prevatt <kf4dte@earthlink.net>
Message-ID: <35F74B8D.686C@earthlink.net>
Source record: 99435

hello,

i have obtained a swan 350 ssb transceiver. i spoke with a gentleman named john bruchey, who used to work for swan and he advised my 350 was an early model due to the white dial w/black and red letters. over the phone, he gave me a few tips on improving the unit performance, most of them greek to me. he did advise this was one of the first models with the internal vfo and the vfo had "paper" something or other (lack of a better term) that would cause it to drift terribly on 10m. is there a way to repair it?

what i need help with is i want to restore and ad some of the add ons to this unit. it is very clean and will tune up 100w on most of the bands. it has "selectable" sideband (?) and i wish someone would explain this to me in simple terms, as the mannual was a bit over my head (sorry, that's the truth!) also, when i switch the unit to tune-cw, the unit is keyed. when i try to use my straight key, the meter runs down to 0w output instead of the other way around. do i need a vox unit for this radio? where do i find one?

forgive me if these questions seem ignorant, but i don't know. i got the unit for a cheap price to hopefully learn some electronic theory with, but this seems to be a SLOW process. i am hoping someone will read this and have had the same troubles with their swan 350 and be able to lend a helping hand.

any help is greatly appreciated.

kf4dte
mike prevatt
lake hendry, fl

p.s. is there still such a thing as an elmer? where can i find one ?(smile)

Let's face it, Tom... that can work to your advantage if you're the seller. Like I told Jeff.. learn to use the Cyberspace tools so they work for you, and you'll come out a winner. Get caught up in the ebay feeding frenzy and you'll lose almost every time.

I'm not a big fan of it. I have bought and sold there a few times. And I hate those incessent messages on newsgroups and relfectors, telling me what is about to expire on ebay. If I want to know, I'LL GO AND LOOK FOR MYSELF!

Hey!!! Me too. I need one to use on the Tuning Meter/Set for the PRC-68.
I'm about to tool up and make a few if I can't find one. They all got stolen
out of the test sets so that we (Marines) could hook up to a "J-Pole" that
we shot by crossbow up out of the (jungle) canopy and got 30-40 miles range
back to call for artillary.

E-Mail: wizard@connectnet.com

P.S. I have a few new "Jungle" camouflage fabric carrying pouches for
PRC-68's. These have a spare battery pocket, antenna pocket, handset
holder, carrying strap, and military (or any) belt clips. Also have
new handsets and "Tape" antennas and the new "longer" (length and range)
rubber duckie antennas.

I used to call my Swan 350 my "Swan three drifty". The problem is that the vfo frequency is very high on most of the bands and so the coils are very sensitive to heat change, which was provided by the tube filaments. It got better the longer the unit was on but never quite settled down. The only fix I know is to use an external vfo. They were hard to find then so probably worse now. I built an external vfo for mine and then it was very stable.

The HW-101 is on the air daily. Looks super nice and works great. Overhauled by RTO electronics in 1991. Have receipt. Orig. manual. With HP-23 supply and 400 hz filter. No mic. Also comes with an SB-401 xmtr for parts. The xmtr in the 401 has full pwr out on 80, 30 watts out on 40, and zero on 20-10. Looks really nice except for a small soldering iron burn on the meter plastic cover by previous owner. The built in supply in the 401 has the same parts as the HP-23 so you get an extra pwr xmfr, etc...

All for $225.00 plus shipping from San Diego. trade for Drake B line or C line equipment.

Source record: 99586

I have two 575A rectifiers Sylvania, that came from a defunct AM
station I was helping clean out--they are obviously new, with the
original packing and the original boxes..they we're spares for the
stations Collins 20V2(long sold)...The only problem with these tubes
is that the glass envelope, and the metal bases have come apart. It
is obvious both visually, and with an ohmeter that the filaments are
intact, and that the base and envelope have to be glued, with whatever
kind of magic glue that's used for such things.
I GUARANTEE these tubes to be as represented, or I'll gladly refund
your purchase price...I'll even throw in an additional pair of 575A,
which we're obviously pulls from the 20V2..don't know anything about
there condition....$50.00 + shp Bob K2LGO
Pse remove the (ns) from my adr Thanks.....

Bought new amp. Need to clean shack!!!!

Prices include shipping (conus). Nothing extra for shipping!!!

(1) Transco RF switch, relay model 11300, classic "Y type new in factory
blister pack. 2 ea. @ $75.00 ea.
Picture @ http://www.SignalONE.com/kb7ww/relays2.jpg

(2) Dow Key /Kilovac model 260B-2604 RF transfer relay, 12 volts DC.
These are transfer (in-out) relays used to switch an amplifier , preamp,
filter, or other device in and out of your feedline. Replace that bad
open frame relay in your amp. 2 ea. @ $60.00 ea.
Picture @ http://www.SignalONE.com/kb7ww/relays.jpg

(3) Dow Key old style DPST, 110 Vac with auxiliary contacts.
Good for that old Boatanchor rig. 1ea. @ $25.00
Picture @ http://www.SignalONE.com/kb7ww/relay3.jpg

(4) B&W 850 Plate Tank switch/coil. 80 -10, Like new. I have extra
switch contact that will let you add a coil for 160. 1ea. @ $100.00
Look at the price of a new one @ http://www.bwantennas.com/850.HTM
Picture @ http://www.SignalONE.com/kb7ww/850.jpg

(5) B&W Plate choke model 800 new in box (NIB) 1ea. $30.00 Look at
their page @ http://www.bwantennas.com/802.HTM
picture @ http://www.SignalONE.com/kb7ww/choke.jpg

(6) Capacitor 32 mf. @ 6 kv, don't know if new or used but looks
new. Size h 6 5/8 " w 4 9/16" d 2 7/8" 1 ea. $35.00
Picture @ http://www.SignalONE.com/kb7ww/cap32.jpg

(7) Capacitor 46 mf @ 6 kv New, but has some paint chips from kicking
around in my junk box. Size h 7 " w 4 5/8" d 3 " . 2 ea. @
$60.00 ea.
Picture @ http://www.SignalONE.com/kb7ww/cap46.jpg

(8) Meters: General Electric (Big Look) New in box. One is 0-2 amperes
DC, the other is 0-100 Milliamperes DC. $30.00 for the pair.
Picture @ http://www.SignalONE.com/kb7ww/meters.jpg

(9) High Voltage, Band, Switch, 9 position, single throw. That should
take care of every thing from 160 to 10. Used, but very good
1 ea. @ $30.00.
Picture @ http://www.SignalONE.com/kb7ww/switch.jpg

Thanks for reading.

I still have a few parts left from this old baby. I have some ordinary
panel knobs, one main tuning knob, and most of the IF transformers
except T1,2 and 4. I apologize for not posting prices on these items,
its difficult when parting a set, however they will not be expensive.
Hi! The rest of the set is gone.

Are you trying to build something "boatanchor era", or are you simply trying to get a calibrator? If it's the latter, you could probably find a crystal that's a multiple of 1MHz, like 4 or 10 or 12, put it in an oscillator, and then use a digital divider to give you the 1 MHz that you want. If you're doing it this way, you could make the divider give you closer spaced outputs too, such as 100KHz or 25KHz. I just looked through a small pile of computer boards I had at hand, and there were two 16MHz and 1 24MHz crystals in the bunch. Lots of times now you can find piles of older computer boards for a dollar or two, and they are bound to provide a suitable crystal. Such boards will often also offer up complete oscillators, though I don't know whether they are fit the exact frequency enough to be useful as a calibrator. The computer boards may also turn up a suitable TTL or CMOS divider to get you down to the desired frequency.

At a hamfest last year, I got a box of older computer boards for five dollars. I've yet to sort through them to see what works and what doesn't. One motherboard noticeably had something missing, and the traces were coming off, so I scrapped it the other day when I needed a part. Pulled a 16 MHz crystal off it, which I plan to use as a marker for the bottom of 2 meters.

Hi Pat,

What is a RBB receiver? WWII USN shipboard.
Made by RCA, or Federal Telephone. 500 kc to 4 mc.
19 tubes. Weighs about 100 lb. Very large in size.

I understand the AWA started shipping the latest issue of
"AWA Review" last week.
My copy has not arrived yet. :-(

My article on the history of National's "coil-catacomb" radios
is in it. The AWA and Alan Douglas provided me with access to
some very rare National marketing dept. photos. Many are part of
the article.

Lots of Nationals not mentioned in Moore's or Osterman's works
are covered. (Not hard when your *only* working on a sub set
of one manufacturers line.) Complete coverage is a different
story when your trying to document everybody.

Additions to the information, corrections to the mistakes,
comments on the content, etc. are all quite welcome. :-)

Your even welcome to tell me how full of it I am... :-)

Additions, corrections, etc. will all be published in a follow up
piece in the AWA "Bulletin," so now is your chance to make sure I
get it right the second time around.

Don't be shy, help me fix the errors, and fill in the blanks.

> way to repair it?

The later models had the vfo oscillator transistor mounted externally on the bottom of the chassis in a sort of pill-box that kept it away from the heat inside of the chassis. Maybe you could try doing something like that to get it away from the heat. Another thing that will help is to turn on the radio an hour before you want to use it and let it warm up.

> what i need help with is i want to restore and ad some of the add

That's good. You probably won't have to replace the finals for awhile.

> it has "selectable" sideband (?) and i wish someone would explain
> this to me in simple terms, as the mannual was a bit over my head
> (sorry, that's the truth!)

The Swan-350 came without selectable side band. That meant that you were using the sideband that was in common use for the band you were on. This would have been Lower Side Band for 80 and 40 meters, and Upper Side Band for 20, 15 and 10 meters. The selectable side band kit let you choose the opposite sideband for which ever band you were on. So if you were on 40 meters the normal position would put you on Lower Side Band and the opposite position would put you on Upper Side Band.

> also, when i switch the unit to tune-cw, the
> unit is keyed.

Without a key plugged in that is normal. The key jack shorts out when there is no key in the jack. That was pretty standard so you could tune up the rig without having to have a key plugged in.

> when i try to use my straight key, the meter runs down to
> 0w output instead of the other way around.

Do you mean that when you press the key the meter does not register? When you are in the tune-cw position you should only see the meter show plate current when the key is pressed.

> do i need a vox unit for this
> radio? where do i find one?

No. The vox is a voice operated transmit device that will switch the unit
from receive to transmit when you speak. It is standard on newer rigs but not
too many people really ever use them. A good old push to talk switch works
just fine.

> lend a helping hand.
>

Hey Mike, I commend you for trying to learn. One word of caution. The Swan
uses 400 to 650 volts on the plates of the final. Be VERY careful if you have
the radio opened up while it is turned on. Make sure you take proper cautions
for working with high voltages.

> any help is greatly appreciated.
>
> kf4dte

Check on rec.radio.amateur.misc there is an elmer list published there every
so often. Also get on two meters and see if you can find information about
any ham clubs in the area they will have some elemers willing to help you out.

Good Luck.
My swan-350 was a hoot. Had it for over 20 years...

Nice sound reasoning David! However, in this newsgroup (and a few
others actually) ebay is looked upon by many as the epitome of evil
and injustice.

This "debate" seems to flare up every few months.

For the record, I LOVE ebay (and I have only bought items there - just
imagine how happy I'll be when I start to sell things there <grin>).

2149. FS: Collins PTO/Dial Assemly KW1 type

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-10 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <35F8A481.FCCE30BC@calweb.com>
Source record: 99389

For Sale:

Collins VFO and dial system assembly. No nomenclature on the
assembly, but has a slide rule dial covering 3.2 to 4 Mhz on the lowest
band and 25.6 to 32.0 Mhz
on the last band. The circular dial portion has calibration for all 5
bands. The dials and fudicial line unit are like new, Glass has a
couple of tiny cracks just underneath the mounting metal clip near the
mounting screws. I imangine over torquing the screws during assembly
did it. The pto portion is very clean, but the little glass silicagell
ampule is missing as well as two hole plugs and the dial string needs to
be re-installed (I played with it and got it off the wheels and lost
interest in trying to fix it fearing I'd screw something else up in the
process. End of pitch:
The unit has been stored on top of my bookshelf for last 3 years and is
dry and clean. No other warranty implied.

$125 plus versapack ups on about 8 lbs from zip 95827.

73,

Bob Miller, KE6F

2151. RAO-7 or NC-127 parts needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-10 00:00:00 UTC
From: Jim Berry K7SLI <basalop@gte.net>
Message-ID: <6taeto$a0c$1@news-1.news.gte.net>
Source record: 99391

Would anyone happen to have a junker NC-127 or RAO-7? I am looking for the front panel to one. The reason I say NC-127 or RAO-7 is that I am going to assume they are about the same radio both internal and external. See page 123 of Moore's book number 3 or page 105 of his book number 4 to see what he calls a NC-127. The ID tag on the radio is probably going to say it is a CNA 46233.

This version of RAO receiver used thumbscrews, rack panel style handles and various ID tags.

The panel on my receiver has been replaced by a rather thin stainless steel one. It is a nice looking panel, and whomever did the mod, did a good job. Thing is that it is not original.

I also need shock mounts for this radio. Any kind of shock mounts will do as long as the mounting holes are about 2 1/2 inches apart and they are able to support a 75 lb radio.

Well, you might consider using one of the Internet escrow companies.
That would seem to protect both the buyer & seller. Using the seller's
feedback is useful too.

Also, I've occasionally seen some pretty good prices on ebay. As an
example, a Kenwood TS-520S, with external vfo and matching speaker
recently went for around $250; that seems a fair price to me.

I've purchased a couple of items via ebay. I got what I wanted and at
very reasonable prices. It sure helps to know what you want and what
you're willing to pay. I was also willing to wait and pass up items
that were "too rich for my taste".

I've also seen some prices go right through the roof! One thing's for
sure, if I ever decide to sell my TV-7 tube tester, I know where to
go. :-)

As has been mentioned, ebay is a tool. You can use it or not as you
see fit.

73s,

Doug - WB6AJX

To be even happier when you start selling things on eBay,
don't forget to hire a "shil" so you can really drive up
the bidding, and really screw the buyer! <g>

As much as you LOVE eBay, I guess, I feel quite the opposite.
It's even more disgusting than those who insist upon spamming
this newsgroup with their "For Sale" ads...which we open to
find the item is not "For Sale" at all...it's "For Auction"
on eBay. <delete...on to next message>

My 6 element Gotham beam arrived in a carton with a sheet of suggestions of how to lay out the elements, and some hints as to element length. There was a section that described matching schemes, but no matching devices were supplied. I assembled it as an interlaced 3 el on 15m and 3 on 10m.

In practice, the Gotham beams were a convenient source for telescoping tubing at a reasonable price!

The place is a sellers paradise. Not uncommon for units to go for 2, even
3 times their actual worth. The buyer is happy, the seller is extremely
happy. What more could you want?

Those auctions are real scams. I just looked at the one ZDnet is
promoting, apparently run by Egghead. They show required minimum bids
for some items equal to everyday retail prices I've seen. And then you
add an inflated shipping cost.

Caveat Emptor!

I cannot buy on ebay because there is always a bidder that has unlimited cash.
The large pool of bidders increases the chance that at least one will not be
denied. I have ceased to be a participant.

I think most people don't realize that many of the outrageous prices on Ebay are NOT real !!

So far eBay has made two changes: Several weeks ago which added a key to each bid form. With a little work, programmers were able to get around this. Now eBay is about to make a new change, which will randomly change security methods, making it almost impossible to write a snipe program. Now eBay says sniping is still allowed, but automated programs won't work anymore. Why disable automated programs? Because it allows "bid robots" to roam freely on eBay. What do they do? They bid insane amounts on thousands of items and hours... with no intention of paying, bumping out people who would. Sniping is the practice of waiting to submit your bid seconds before the auction closes making it impossible for anyone to place a bid after you.
As you can see, thousands of bids per hour are being made that are completely bogus!
If a bid is so outrageous that it doesn't seem real, it probably isn't!

Gotham Antennas,

Ah yes, wonderful Gotham. I bought my second antenna from a manufacturer
back about 1976 from Gotham, a triband quad. Taught me how not to build
a quad and how to build a quad. Also taught me what happens when you in-
sert a wooden dowl into an aluminum tube without sanding it down a little
and painting it...it swells from moisture...TIGHT! Never did get that out.
And those aluminum spreaders...

I could list about 6 different antennas I built from that 2 element
triband quad kit besides trying to make that quad itself
work. Never could get the SWR bellow 3:1 on the quad as I recall.
Would be nice to find an unbuilt gotham quad kit today just to
see if I've learned anything about getting it to work. The quad
actually did seem to work good, just poor SWR. I did build a dandy 20m
quagi (quad driven with yagi reflector) and a 2 element 20m yagi. Also
various verticals.

Like the fellow said, a convenient source for aluminum tubing...AND a
way to start learning about antenna building. I kind of miss Gotham.

Interesting I was not aware this was hapening. Has anyone here sold
an item on ebay where the successful bidder could not be identified?

2185. EDDYSTONE DIAL STRINGING

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-11 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <1998091116195400.MAA20168@ladder03.news.aol.com>
Source record: 99276

Resisting all emotions to throw the radio against the wall, or rip out the dial string (wire), I've decided to act my age and seek help.

I just got a S-750 radio...beautifully made Eddystone SW radio (NO, it's not in Fred Osterman's book), cast aluminum chassis, big dial, VARIABLE I-F selectivity (take that! Watkins Johnson HF-1000) accomplished by pulling slugs ion and out the transformers just like my Eddy 830/7...a bigger set.

But I decided to give the tuning dial a twist the minute it came out of the box, assuming it was a geared dial. Not so.

The rest is obvious.

I could re-sring this myself, but they use multiple turns on the spools at either end of the fine wire, which has kinks now (it didn't before yours trulty came along!), and which is off the rollers everywhere. My vision just doesn't cut it anymore, nor does my manual dexterity. The rollers are grooved in a spiral, neat.

Anybody on the East Coast (near NYC) fix these?
BTW, I'd like a book too.

The Egghead auction is a commercial venture selling new goods, so it's as bad as the Home Shopping Network or QVC.

I think that E-Bay is OK. There's stuff there that I'd never find on my own, from sources that don't know squat about the Internet or Newsgroups or Ham F/S bulletin boards.

I'd say 25% of the items are being sold by non-hobbyists (widows, etc) before chucking them in the dumpster. Think of it as recycling for the masses.

All in all, I've found a few real gems, and lost out on others. (Did you know that the Hunter Company in Cedar Rapids made a Collins knock off of the A-series transmitters? I had NEVER in 45 years even heard of Hunter, yet one was auctioned off last month or so).

It's a little boring to go through the listings day after day but they have a search engine that looks for keywords like "shortwave".

In the past 90 days I bought a wireless alarm for my aging mother ("I've fallen and can't get up!), a two-line answering machine at $20 in great shape, a Science Fair regen radio, a bunch of Eddystones, a Regency SW receiver, a couple of camera items for my Nikon, and I sold a NYC TAxi Medallion plate for over $100.

It's not for everyone, but I've got no complaints. If I can't afford it, I pass!

I haven't had this happen to me (yet), but I know I've seen many items re-listed a few days after the auction closed, with a note indicating that the seller had been "stiffed", or the buyer never responded to the seller's emails. Sounds like auto-sniping to me.

Actually, I've sold things on eBay for prices that astonished me, and I have yet to be stiffed by a buyer (at least on a high-$$$ item; I have been stiffed on a couple of nickle-n-dime items). However, you're right; there are plenty of items that close at totally unrealistic prices, and I'm certain that no one, even a rich dude with lots of money, would bid that high.

to which steve s. commented and asked?

>
> Interesting I was not aware this was hapening. Has anyone here sold
> an item on ebay where the successful bidder could not be identified?

Nope. I've got several items on ebay right now that seem pretty normal prices. The Heath amp is a little low and Philmore chrome mono tube preamp seems a little high... But it is NOS unused in it's original box w/ paper work and parts bag.... - the S&G safe lock seems a bit light - but I figure there's just not that much demand for that kind of high secruity lock... The plasitic model submarine kit at $52.00 is just about right - I paid $40 ea. from a dealer for two of them about a year ago - so like I said - that seems about right... The Mini Pops rhythm unit who knows??? I'll be happy where ever that ends up (came on the Hammond A100 I bought a few months back - on ebay - which was super low!!! (you can't hardly touch a Hammond B3/C3/A100 class organ around here for under $3500 - and nice ones reach $6000 -- I bought a _really_ sweet A100 in great shape for $1500 - on ebay... The bid robots must have been asleep! (as were about a zillion others looking for a good deal on tonewheels!). Old multimeter at $1 is maybe a tad low - I've sold some pretty pricey stuff on ebay - never had a problem with the high bidder...

best regards...

Unlike other auctions E-Bay only offers items for sale by
individuals and then they get a percentage of the selling price.
E-Bay sells nothing itself. Those high prices on E-Bay are the result
of _Human Nature_, people let their ego's get out of hand and then pay
ridiculous prices just to win the bid. I always buy items via
pricewatch www.pricewatch.com or off the misc.forsale newsgroups and
then sell via E-Bay.

Hi John OM,
You have to remember, ebay is not in the 'real' world, it is just the
SF Bay Area, HI! Too bad there is not an 'ebay' in some other part of
the country where prices paid for things are much lower.

Hi OM,
The SB-220 is an excellent amp. Have seen a newly-built (absolutely mint) one go for less than $600. I got a mint one from original owner for $375 last year. They are a better design than the Kenwood TL922 or Drake amps (they don't overvoltage the filaments of the 3-500Z's, and have fil. inrush current limiting), but much lower priced, which makes them a great buy in my opinion.

73 and GL,
Don, W6JL

I bid just under regular retail for an Edison Cygnet
Horn, only to find it relisted the next day saying that the
top bidder withdrew. I wrote immediately and agreed on a
price with the lister, for almost the highest amount, and
sent my check immediately. He held it 3 weeks and returned
the check, saying that the top bidder had decided to buy.
Right. He just found another buyer who paid more than he
had agreed to sell it to me for.

I have a B/K LPH, not sure how many channels, looking for the following:
A copy of the programming manual and owners manual
A charger
A spare battery
A speaker mike

If you've got any of the above, let me know...
And if you have the manuals, drop me a note, I'm using this radio, not collecting it, don't care if the manual is a fax or photocopy (and I'm paying shipping/copying costs...)

Thanx

Eric

Mike,

Per "Tube Lore", this IS one nice hard modulator triode:
Fil: 8.2 volts at 16.8 Amps
Mu: 30
Ratings: 30 KV, 15 Amps, 300 Watts
Suited to long pulse use.
Used as pulser in AN/MPS-9, AN/MPQ-18 and SCR-584
Similar to an Eimac 1000T

Hope this helps!

IMHP - it's what the traffic will bear. Some prices are very high but there always seem to be buyers willing to pay. Some prices are reasonable, like the scanner and receiver I just auctioned off. I got several bids for each but not more than I really thought the items were worth if I were the bidder. On the other hand, I bid on a scanner and was outbid by about double. I didn't think it was worth what soemone finally paid, but who's to say. I eventually bought that item at RS for even less then I was going to pay if I had been the high bidder. Go figure!
It's fun to "shop" Ebay and see what's going for what price. And you never know, your bid may be the high one.

2212. Heathkit HW-16 CW transceiver: Value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-11 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <35F9AFA7.66E7C554@asu.uswest.net>
Source record: 99303

At a local repair shop, I discovered a cache of tube-type ham gear for sale, Swan, Dentron, Yaesu, Heathkit, Hammurlund, some military, etc. Among these, there is a HW-16 with a label saying "make me an offer." The tuning knob is very loose and jerky, probably indicating not only a defect in the drive mechanism but the VFO itself. Cosmetically, it is a 6 or 7, and I have no idea about that electrical condition, rx, output, etc. The seller will allow some basic testing in the shop, connect to an RX antenna, tx into a dummy. What is the rated output, what finals, and how many does it use.

Given my description, and if the radio receives fairly well and tx's 75% or better of rated output, what price should I offer him? I have seen these radios in quite good shape offered on this group and that unmentionable auction service for 100-125 before. BTW, this guy's asking prices seem pretty high (he has a a Hallicrafters 6 xverter and a 2 xverter in cosmetically nice but far from perfect shape he wants $550 for the pair, $1050 for a FT-101E/PS/patch, linear with no tubes [rough looking]) .

2214. WTB:Manuals for Gonset Communicator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-11 00:00:00 UTC
From: James Donahue <jgdonahue@earthlink.net>
Message-ID: <35F9B6FC.9EF91493@earthlink.net>
Source record: 99305

Several years ago I picked up a Gonset Communicator IV and an external Gonset Communicator VFO. I've never had a chance to use the radio or test it out but I would like to get the manuals for the radio and VFO.

Additionally, can anyone tell me any additional info on this radio and VFO? The radio seems to operate between 144-148 MHz with the VFO offering 50, 144, and 220 Mc band access via a selector knob on the front panel.

Thanks...

Jim Donahue

From: zeitler@ibm.net
Message-ID: <35f9fef0.0@news1.ibm.net>
Source record: 99307
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

HW-101 overhauled by RTO in 1991. On the air daily. Looks very nice. Comes with HP-23 supply and 400 hz cw filter.

SB-401 xmtr has full power out on 80, 30 watts on 40, and zero on 20-10 meters. Loos very nice except for soldering burn mark on the meter plastic cover.

orig. manuals for all except do not have a manual for the HP-23.

Some of the tubes in the SB-401 are used in the HW-101. The pwr xmfr used in the SB-401 is the same used in the HP-23.

Sell all for $200.00 plus shipping or trade all for a nice Drake R4B or R4C rcvr.

>Is it me or do anyone thinks that the prices on the auctions on
>ebay are outrageous?

I think (1) there are a lot of collectors hoarding things they can't really use, expecting a stock market crash on 1-1-Y2k and wanting swappables; (2) a lot of con merchants are pretending that beer mats are valuable; (3) a lot of people finally convince their insurers by auctioning a valuable back to themselves; but they have to place an outrageous Reserve in order to do that without any risk of selling.

All of this makes for many outrageous prices not only on eBay.

I have an ICOM- 701 with Power supply for sale.

The unit is in showroom condition.

Excellent working condition.

Comes with built -in dual VFO.

160/80/40/20/15/10 meters.

LSB/ USB/ CW/ RTTY

Comes with original ICOM power supply and hand mike.

I am asking $ 300.00 or best offer.

My phone number is 403-568-4312 only in eves or weekends

I am in north central Alberta.

My ham call is VE6OGM

Shipping cost I would estimate at about $30.00

You can email me at:

2225. Re: Heathkit HW-16 CW transceiver: Value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-12 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <1998091217185800.NAA11803@ladder03.news.aol.com>
Source record: 99196

The Hw-16 is about 90w max input power, usually about 20w output. It is not a transceiver in the true sense, but is actually a seperate rx and rx in the same box. They share a common pwr supply. The rx is tuneable by the tuning dial (makes sense!), but the tx is xtal controled.

The stiffness or binding you noted in the main tuning is not necessairly a significant problem; the dial is driven by a grooved pulley that works by friction against the plexi dial display disk. The position of the drive pulley is set by the bearing position as it passes thru the front panel. It may be too tight, or comming thru at some angle. Or, to look at the worst-case, the dial disk or pulley might be damaged.

These rigs sold well over their production life, and are very common. The were very popular for Novices facing xtal control/75w power restrictions under the law of its day. The rx is good, and features a crysal filter.

The pricing which the other fellow posred is typical to my experience. $50 seems to be as low as they go for anything better than a parts rig, and I have seen $150 for the "like-new" condition.

2230. Need E-Bay Dictioary!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-12 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <1998091219140200.PAA27302@ladder03.news.aol.com>
Source record: 99201

HELP! I need an E-Bay dictionary! I just finished touring the electronics section, and I found stuff I don't understand.

"Mint, at least a 9.5 out of 10!!"
"Like New, Complete! .... Missing manual, mike, and power cord."
"Rare!", followed by a description of earth, wind, or fire...

And folks who sell a piece of gear one week, the manual next month, power supplies under a different name,.....

"Works great! I hooked up a wire and power and it (baked bread, sliced bread, no-stick, shined brightly). Sold AS-IS..."

I suppose we're soon gonna have gear that cures baldness, corrects vision, promotes weight loss, is "just like Viagra",....

Who said the traveling medicine show is gone?

Source record: 99203

About 5-8 years ago, I bought one with a VFO and all for $30.00. It worked great! I even did the modification for SSB RX. It was a nice rig. I must say, though, for HF, I prefer the older tube-type radios than the newer rigs. True, I wouldn't mind getting my hands on a few of the newer radios, but I would certainly like to collect the ol' Heathkits.

Steve,

You may want to look at Hosfelt electronics <http://www.hosfelt.com/> they have LCD panel meters on page 11 of their catalog (they will send you their catalog for free). The 3.5 digit LCD meter is $7.89 they have 4.5 and other types of 3.5 meters (LED, backlit, etc).

Most of these meters use 9V for power (the chips were made for handheld DVMs) the 9 volt power should be isolated from the voltage being measured. So a 9v battery in the enclosure will work.
Since you are using it in a transformer powered tube tester maybe a small 600:600 ohm transformer on the filament taps of the transformer will isolate the voltage and then a diode, cap, resistor and a 9.1V zener on the other side of the 600 ohm transformer will give you isolated 9 volt power for the meter.
I've seen various articles showing how to get the power to the meter without the battery in old issues of Nuts & Volts. Sorry, I don't have any of those articles anymore.

This weekend you can contact a Special Event Station on AM from
the FINAL Gaithersburg Hamfest (FARFEST) operated at the
Historic Gaithersburg Fairgrounds in Gaithersburg, Maryland.

Look for W3PRL or KB2APE on 3880-3885, 7290, 14285 and 29000 kc/s
with a fine booming AM signal. The AM Corral Gang will be holding forth
with a fine signal and introducing the Hamfesters to the delights of operating
AM with those good old vintage radios, known affectionately by some
as "Boatanchors!"

>> outrageous?
>
>Aren't ALL auctions? The whole concept is a bunch of people competing
>to see who can pay the MOST for an item. It would be silly to expect a
>LOW price from an auction.

This is a good point. I have been to both e-bay as buyer and seller as well as buyer at live real world auctions. E-bay has a potential participating gallery of millions of individuals, many with more money than brains, for any given item. An SX-88 on E-bay is going to bring HUGE prices by virtue of its relative rarity, the compelling nature of the accompanying blurb, and the potentially vast numbers of price irrelevant bidders. Note also, that persons bidding at E-bay are generally looking for specific types of merchandise, and are competing with similarly minded individuals. So a person bidding on an SX-88 is bidding against SX-88 familiar or at least Hallicrafters familiar bidders, who may number in the thousands. At real world auctions the galleries are smaller, more generalized, meaning fewer item specific expert. In real world auctions, a person bidding on an SX-88 is less likely to be surrounded by bidders who know what the hell it is. So, the chances of finding a bargain are potentially much higher.

However, I have been to real world auctions where one bidder with a bottomless checkbook,-- in the game for the sport, not the merchandise,-- has driven up prices to far beyond realistic expectations, and walked away with many of the more desireable items for his/her trouble. These are the items that show up in antique shops with obscene price tags. A fact not unnoticed by other dealers, who then feel justified in raising their own prices accordingly.

So I guess the watch words for E-bay, are like anything else....Caveat Emptor. Or to paraphrase, in the words of discount retailer Sy Syms...."an educated consumer is our best customer."

Keep your wits about you, and bid wisely. You'll find what you want at teh price you want...eventually. Even on E-bay. I've done it several times.

Could someone please tell me where to take the audio in and out from an
FT-990 radio.
There are plugs for packet and what not (friends radio) but where would be
good to plug in on the back to get the audio to send and receive SSTV??
Any info would be appreciated. Oh and I looked in the owners manual and it
doesn't say anything about SSTV. DARN.
Thanks all.

Source record: 99220

They'll convert over to 440, and are also pretty easy to make repeaters out of due to the seperate TX and RF boards. Unfortuantely, I haven't got any schematics for them any more. I don't remember if the conversion to the ham band required anything more than a crystal change and tune up, something tells me that was all it took. I remember that retuning the receiver for the ham band was kind of touchy, and if it's operating in the 460 band and you simply swap the crystals, you'll have to inject quite a bit of signal into it to hear anything before you start tuning.

You might be able to still order the manuals through an EF Johnson Dealer. A few years ago, the EF Johnson company was sold, and I don't know if they still stock manuals for the older equipment, but it's worth a try. Perhaps a dealer might have a manual that they'd be willing to part with if a new one isn't available.

If you don't have a Johnson dealer in your area, send me a private email and I'll give you the info for the shop that I used to work for here in the Detroit Area.

I don't believe that you will be able to receive SSB with the R390A as is.
The BFO is for CW and wasn't designed for SSB. There is a companion SSB
unit that takes the IF output of the 390 and allows for USB/LSB RX.
I don't remember the model number of the unit. I had a 390A and the SSB
unit, but sold them 2 years ago at a ham fest.

cheers

Rick

Perhaps you weren't aware that you posted a japanese solid-state radio
to a vintage/vacuum tube radio list??

This list is for the purpose of discussing, repairing, and to an extent
selling old radios(a.k.a. 'Boatanchors') and the related
equipment/items/publications.

I'm sure I'm not alone in asking that you don't post Yaecomwood type
gear to this list, although we'd all enjoy having you participate in the
area of tube gear. You could try rec.radio.amateur.equipment for your
type of radio. :)

Yes, I couldn't agree more Bill. At least these money hungry dealers can be honest in their posts, not decietful by putting 'FS' when it's really 'FA'. That is nothing short of lying.

Better yet, why don't they make a list for called rec.radio.fa and save us all the deception tactics - then they can deal with their own and profit/suffer together.

I see a lot of them at swapmeets so they are not rare. Mint condition I'd say $75 max. For what you describe maybe $25 to $40. Start low as I bet he doesn't have many offers for it. As I recall it uses a compactron driver/final tube which might be hard to find if it is flat. The rig is xtal controlled and I believe around 50 watts. I built one new long ago so my memory is poor. It was designed as a novice rig and works but you would not want it for a main rig. The sidetone is a neon bulb oscillator that puts out a sawtooth wave and is a little rough on the ears after a while.

Aren't ALL auctions? The whole concept is a bunch of people competing
to see who can pay the MOST for an item. It would be silly to expect a
LOW price from an auction.

For some folks, Ebay prices are a bargain and
a chance to find sets they may otherwise never
run across. There are some isolated areas where
one doesn't have the opportunity to attend shows or
auctions to find this stuff. I have found a few radios
(well, one anyways) that I had been searching for,
and got it at the going market rate.

The trick is to set a price in your mind, bid it,
stick to it, and hope for the best.

Pete

SF Bay Area ??? are you Trolling ??? E-Bay has listings from
individuals all over the US and other parts of the world, they've
also just been named to officially take over AOL's classified
ads/buying/selling. As I mentioned earlier E-Bay _Doesn't_ sell
anything _Themselves_ , and they _DON'T_ set the prices, they merely
get a brokerage or percentage of the item's worth when it's sold as do
most _true_ auctioneers. I suspect it's folks ego's that cause such
high prices to be paid but you sure can't blame E-Bay for folks that
bid _more_ for items than you can buy them new for.

How do they get around the registration part in order to bid? I just got burned on a telephone to the tune of $25.00. I was high bidder and sent my money order but never received the phone. E-bay had no valid address and the phone was disconnected. I have also been burned on other items..I bought a computer with 17" monitor and the monitor crapped out after two days. The seller said I must have changed something and would not make good. I have had others, but those were the worst. I would say 70% good and 30% bad. I have bought items very cheap and sold items very high (much to my suprise) so I guess it is a crap shoot. A lot of people actually run their businesses on E-bay. I wish there was a way to tell who is a private party selling an item and who is a business. I think that makes a difference.

Could some one please tell me where I can find the Technical manuals for a Collins R-390A/URR? I am new to Amateur Radio with a tech license, but use the radio to listen on HF. I can recieve AM and CW just fine, but I think the internal BFO pitch is off because I cannot get SSB. I have tried tuning in on the KHz knob while adjusting the pitch, but I still cannot get a clear voice at all. I am prepared to purchase a copy or authentic manual for the radio, but if someone could tell me where the internal adjustment is I would really appreciate it! Thanks.

Suggest you look at the neutralization circuit in the LK450. They probably just use a parasitic choke. Probably bad. Then look in the amateur handbooks (most have the info) on how to neutralize the final. Shouldn't be too hard with the 3-500Z up to 10 meters.

I have on loan, with an option to buy, a TS-520, but the manual wasn't available at the time. I powered it up with my antenna connected, but the only sound I heard on any band setting was hiss. I tried adjusting all of the controls, but no difference was heard other than the AF gain.

There are 2 tybe-socket-style ports on the rear panel, one labeled EXT VFO and the other REMOTE. Is there a jumper plug that must be installed here when these optional units are not, to make the rest of the unit operate normally (I know that my Hallicracters has such a plug.)

If not, does anybody have any suggestions on what else might be wrong? Any common failures with this symptom?

Lastly, assuming that we can get it to work, what ballpark of price range is fair for this rig?

The VFO plug must be installed or a jumper installed between pins 8 & 9
on the VFO socket. The remote plug doesn't need to be installed..

Source record: 99103

Hello, everyone.

I just picked up a Hallicrafters SC77A in working order at a recent hamfest for fifty bucks. It seems to have reasonable receive on the bottome three bands but the highest one seems pretty dead. Cosmetically, it's only fair, I suppose. The audio doesn't sound all that hot, either - seems to overdrive the speaker at even moderate levels, and the AVC circuit doesn't seem to work all that well either.

I don't of course, have any manuals for it. How is Hi Manuals to deal with? They seem to have a pretty complete list of manuals, including both my Hallicrafters.

In addition, any advice or complications known about this model would be appreciated.

I intend to restore it to use as a working receiver in my hamshack/office.

Bob VE7HS

I have used lots of older type receivers for SSB and most of them work reasonably well if you use the CW position, which turns the BFO on. Then the audio gain should be turned up, ususlly all the way and the RF gain control used to control the volume. That way the SSB signal does not over power the VFO signal. The VFO is replacing the carrier so that the detector demodulates the signal like it was AM. The VFO needs to be set to one side of the passband or the other. Which side depends on if you are on USB or LSB. For USB the BFO should be placed on the lower edge of the passband.
In addition you need to use a selecetivy position that is 2.1 or greater.
Tuning the SSB signal after doing the above should be done slowly but can be done and you will get better with practice.
I hope this helps.

Hello,

I have a Hallicrafters S-119 SkyBuddy II that I am restoring. The perforated plastic speaker grille is destroyed and I need some type of material to replace it with. Can you advise me where I might be able to obtain the original material or a good replacement material?

Please email any suggestions that you might have.

Your help will be greatly appreciated,
David

2310. 2 Meter Civil Defense Rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-13 00:00:00 UTC
From: Richard messick <rmessick@map.com>
Message-ID: <01bddf19$967b95a0$411347cc@Map.com.map.com>
Source record: 99151

I picked up a 2 meter Civil Defense receiver/transmitter (60's era?) this weekend at a local hamfest. It's not in bad shape, but does have a shorted transformer and who-knows-what-else wrong with it. I'd like to try to get this rig working, but need a schematic. Does anyone have one or possibly know where I could find one? Thanks for the help!

2311. HW 101 info wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-13 00:00:00 UTC
From: george@epix.net
Message-ID: <35fbdbe6.6828860@news.epix.net>
Source record: 99152

I picked up a HW 101 and SB 630 at a hamfest yesterday.
The 101 seems to work ok with about 80 - 100 watts out but I cannot
seem to get the thing to work right on CW. I have tried fiddling with
the VOX sensativity and delay as well as the anti trip to no avail.
Any thoughts? The side tone does work when I key it and the SSB works
also.

Also looking for manuals for both these pieces of gear.

2312. Diamond X500HNA Antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-13 00:00:00 UTC
From: Carl Domanico <cmd-dell@worldnet.att.net>
Message-ID: <35FBDF59.4934D82B@worldnet.att.net>
Source record: 99153

Hi I wonder if there is someone out there who is very familiar with the Diamond X-500HNA Dual Band 144 / 440 Vertical Antenna.?? Recently, I purchased one and installed it on the roofï¿½. Anyone familiar with this type of design Antenna knows that there are no user adjustmentsï¿½.you just put the sections together attach your coax and your radioï¿½.I initially was using an older comet 144 / 440 a CA-2X4Zï¿½.it worked fine for about 8 yearsï¿½then I found it developed a problem with the S0-239 connector at the baseï¿½it seemed to have literally fell apartï¿½but as for the Antenna weï¿½ll it worked great for 8 yearsï¿½.great signal and great matchï¿½.Anyway I decided to go out and put up a new Antennaï¿½so I sprung for a big $ 240 for this Diamondï¿½a bit heavy in construction and it has an N connector at the basses even sprung for this LMR-400 Times-Microwave coax cableï¿½Weï¿½ll after the antenna was erected and this great cable was installedï¿½I proceeded to make an swr graph on both bands from one end to the otherï¿½.Weï¿½ll after checking 440 MHz..I was pleased..since the swrdid not exceed 1.5 from one end to the otherï¿½However, on two meters it was a horse of another colorï¿½It seemed that the bandwidth started a bit higher than it should haveï¿½down on 144 MHz I was getting 2.0. as I moved up the band it seemed to start to dropï¿½at 145 MHz..it was 1.6 ï¿½and then as I moved up further it came to a more normal readingï¿½I even went past 148 MHz and found it to be goodï¿½.Bottom line is the antenna was tuned to kick off a bit high than it shouldï¿½I called Diamond and they were very nice about it..They said I could send it back to them to have the Antenna Re-tunedï¿½Now this is all well and good but that means I would have to take it down..package it up..ship it to the West Coast from New Yorkï¿½pays shippingï¿½And then when I receive it back put it back up and hope it is correctly tuned.. There are no user adjustmentsï¿½and even if there were you have to be carefull that you donï¿½t knock the other Band out of wack..while trying to adjust oneï¿½What I need to know from someone who is very technically familiar with this antennaï¿½Is there a way I can Make an adjustment on it to bring the SWR back to where it is below 1.5 from 144 MHz..To ï¿½148 MHzï¿½.The Technical Design is 5 / 8 wave three- element C-Load antenna (2 Meters) and 5 / 8 wave eight-element C-Load antenna (70 cm).. I have various test gear..a Bird Wattmeterï¿½High End Digital VOMSï¿½a couple of SWR Metersï¿½and some good common senseï¿½.If anyone out there in the Radio field can help me out here I would be indebted foreverï¿½..

Thank You Very Muchï¿½.Carl M. Domanico N2MFW

My $.02...

There ARE some outrageous prices paid, apparently because people get caught up in a "feeding frenzy." It's the, "I can't let this one get away from me," thing. But people who avoid this can make some very good buys on some hard-to-find items. People with some rather obsure item (they could never find a local buyer for) can find a buyer and put some money back in his pocket.

I just paid $80 for an mint condition ol' EV-664 microphone. That might sound excessive, considering it's out of production and sold for about $55 new, but... considering I was offered two of them by other members of the Collins Collector's Assn, for $210 and $300 (this one with the original $9.95 stand), I think it was a pretty good deal. It's all relative!

Check the keying line circuit to see what is not going on right. When the rig switches over to transmit, the grid block keying is supposed to allow a signal to pass thru all the stages to the antenna. Also some of the IF receiver stages should be cut off to prevent overloading the reciever. When running is ssb the grid block keying is defeated.

Need to move these items.
1. NIC (new in can) 3CX350A/8321 and 4CX350A which have the
same specifications. One a triode and one is a tetrode. Priced at $120.00
ea. or make a reasonable offer.
2. 2 ea 4CX5000A/8170 @ $400 and $600 Both used pulls. Offers accepted
also.
These were in Colllins transmitters for the Univ of Hawaii, and were
used for daily
ops for about 15 min per day. The spare transmitter was only tested
once a quarter
so they do not have much time on them.
3. 8965 Planar Triode $20 in AES now $8
4. 6816 Planar Triode $40 ea. listed at $70
5. 6081 Klystron, I think, as it has a waveguide output flange. Made by
Omni-wave
6. 6442 GE UHF amplifier tube, pull from UHF power amp spare (unused)
$40 in
AES. now $20
7. 7554 GE UHF amplifier, preamp driver tube also listed at $40. now
$20 each.
8. From same power amp, have 4X150A/7034 Eimac tube. $40 in AES,
now $20
===== also have an unopened 3X2500A Glass seal not ceramix (3CX) Owner
wants $400
Just think, 2500 watts or more and you can SEE it..
All above tubes areVarian/Eimac unless otherwise identified.

Ray in Honolulu

Hello,

This radio is valued in Bunis at $2000+, and in Grinder at $2500+.
The current bid of $1800, represents a bargain price. Now if it was
the big, (48" diameter), model 1186, then it is valued in Bunis at
$25,000. These radios were worth a fortune long before Ebay.

Hello,

The Heathkit book says, "a pair of 6146 finals, and
has a rated power output of 120-140 watts on 6 meters,
and 95-110 watts of 2 meters". It doesn't say how the
finals are connected.

I got this from the R-390 Newsgroup:

Subj: [R-390] R390B??? Rumours....
Date: 98-09-13 18:44:29 EDT
From: dgibbs@rational.com (Dennis Gibbs)
Sender: owner-r-390@qth.net
Reply-to: dgibbs@rational.com (Dennis Gibbs)
To: boatanchors@theporch.com, r-390@qth.net, collins@listserv.tempe.gov, boatanchors@listserv.tempe.gov
CC: crippel@exis.net, trinit69@idt.net

Greetings R390A fans,

Sorry for the wide distribution, but I believe this information is interesting and pertinent.

While at the Gaithersburg, MD hamfest today (9-13-98) I heard a rumour from a fairly credible source. The source stated that he has a friend who works in Navy procurement at the Pentagon.

According to this person, the Navy is having difficulties with the modern Racal, WJ, and Harris equipment standing up to the humidity and stress of shipboard use.

The Navy is in the process of procuring 1500 NEW MANUFACTURE receivers based on the R390A! The person said that it will be very similar to the R390A, with some changes. These changes include:

1) An addition of an IF gain control. I'm not sure whether this is in place of, or in addition to, the RF gain control. Although it would seem to not make sense to have both IF and RF gain...???

2) The 3TF7 tube is eliminated and is being replaced with solid state circuitry.

3) The front panel will be engraved, not silk screened.

4) The nomenclature of the receiver will be different. He didn't say what it would be, though....Perhaps R-390B?

I tried to press this person for more details, but he did not know more.

Also, I'm not sure exactly, if this story is true, what stage of procurement this is in. I don't know if it is being sent out for bids, or if a specific contractor has been selected, or what.

Has anyone heard these rumours? Can anyone confirm/deny them?

Regards,

Dennis Gibbs

Looking at the unit, I think it is the "Yellow Gonset Communicator". The model name seems to be the "Communicator", the tuning dial has a diamond-shaped Gonset logo, and the enclosure color is the familiar school bus yellow.

Thanks for the help with the ID on this unit.

From: "Robert G. Carter" <dc2light@radix.net>
Message-ID: <6thm92$4n9$1@news1.Radix.Net>
Source record: 99189

While shuffling some old files this afternoon following the hamfest [formerly known as Gaithersburg], I discovered an original copy [(c) 1957]of the Technical Materiel Corporation (TMC) Instruction Book for the Single Sideband Adapter, Model GSB-1 (companion to the TMC GPR-90 receiver). The manual is approximately 18 pages including the following:

General Description
Description
Front Panel Control Controls
Technical Specifications
Installation
Unpacking
Installation
Operation
Description of Controls
Tuning Procedure
Alignment
17 Kc, 472 Kc and 438 Kc Oscillators
Data
Voltages and Resistances
Electrical Parts List
Schematic Diagram.

The manual is in excellent condition and available for adoption by a manualless GSB-1 owner. Cost of the transaction is $10 to cover shipping supplies/charges and my time.

Interested parties please contact me via email. Regards

BOB CARTER W5BTC dc2light@radix.net

>>
>> 73,
>> Don, W6JL

Don, there IS a place.

It is kind of strange but the BOB DUCKWORTH's APACHE AUCTION SITE
has sold a number of things at VERY VERY low prices.

I have found it is a great place to unload stuff I don't need and give someone
a bargain at the same time. There is NO FEE there!

eBAY is getting rich off the sales of things at highly inflated prices. Their
comminssions are huge for something that doesn't cost them much to operate.

Try the DUCKWORTH-APACHE auction site next time!

Go to -
http://www.atl.org/wits/

and then click on Auction.

Some of the cattegories have bizarre sounding names, but I have found some great
deals on radio gear and computer items there! ALso sold a few bits and pieces.

It is nowhere near as big as eBay, but it is FREE!

>

No matter which newsgroup I am reading this "trolling" message seems to pop up every three months. As both a seller and buyer on ebay I ran some non scientific research to find out why some people paid what seemed to be high prices for items on ebay. Discovered the following.

For some people it is not a high price. If you are Joe T. Blow living in Podunk Idaho, pop. 8399, and you collect Hallicrafters exactly where are you going to go to find that SX-99 you need for the collection? Maybe you can wait for the once a year Hamfest and hope one will be there? For Joe T. Blow of Podunk Idaho paying an extra $25 or so for that needed item is actually a god send of sorts.

I asked 25 people who bought items on ebay for a higher price than it sells for in a "Price guide" why they bought the item on ebay. (I did not tell them they paid too much and many of the items were not radios.) Many wrote back that they knew they had overpaid (though, as I say, I didn't point that out to them) but they had been looking for the item for some time and just couldn't find it. MOST responded with words to this effect..... "I live in a small town and there just aren't any (beanie babys, antique radios, comic books, Nascar models, etc. etc.) available here.

Ebay allows many people who want a certain item to see it at the same time. In other words....maybe ebay's prices aren't to high....maybe that is what the item would sell for anywhere if the target buyers were all in need of that item. If you have a little antique shop with some radios for sale, sure you feel good if someone finally walks in and buys that SX-99 for $100 after it has been in your shop for eight months. You got $10 over the low end price for that item in most price guides. What happened is that there was only one person that entered your shop during that eight months that was in need of an SX-99 for their collection. What ebay does is take that same radio and present it (through the use of the search engine) to thirty or forty people who would like to own that radio and who live thousands of miles from your antique shop. One or two of those people need that radio more than the others. Suddenly $100 for that same radio is too low. One of them will pay $150 and be very happy to do so. Probably some one in a small town where there is not an SX-99 for sale within several hundred miles.

And last just a personal comment not related to the survey I ran. Most of the final prices I see on ebay are well under the prices I see at the flea markets, antique shops, etc. here in the large city I live in. Yes the price is more that the "book price"....but it's way less than the prices I see in the local shops and expecially lower than the prices I see on "Antique Radio Home Pages" here on the net. Some of the prices I see on some of these pages are completely outragious as well as some of the prices in the radio classifieds here on the net. Just visit some of those if you want to see some high prices.

That my 20 cents worth. Never mind the fact you asked for only 2 cents worth.

Hello,

I have a Hallicrafters S-119 SkyBuddy II that I am restoring. The perforated plastic speaker grille is destroyed and I need some type of material to replace it with. Can you advise me where I might be able to obtain the original material or a good replacement material?

Please email any suggestions that you might have.

Your help will be greatly appreciated,
David

I dont think you have to in most cases with a 3-500. You have some other problem. Neutralizing just adjusts so that max output falls at the same place in tuning as min plate current. There is no such adjustment on your amp. Or pretty sure anyway. You may have a parasitic problem or others. MK

Folks,

Do any of you know a good source for replacement 572B tubes? I'm told that the Svetlana tubes may cause problems in the Yaesu FL 2000B and 2100B amplifiers due to their slightly higher gain and different bias requirements. I don't really want to modify my unit when the tubes are replaced if I don't have to....

Well I'll be. I built a 6DQ6 MOPA for 80 & 40 back about then... but I'm not sure if it really qualifies as a "One-Tube" transmitter as I also used an OA-2 voltage regulator tube. Check out the '63 to '67 handbooks for the circuit... which was basically a pi-network hanging off of the anode of the 6DQ6, and a crystal across the grid and screen.

FS I have a pair of traps from a B&W model 370-12 multi-band antenna kit..The kit allows operation on 10-15-209-40--& 80 Meters with these coils, and a total antenna length of approx 110 feet...The kit orginally came with a center connector,insulators, coax, wire, and an PL-259 connector..These parts are very easily obtained from the average junk box, and once together make an nice multi-band antenna. The coils appear new, with no signs of weathering at all..$30.00 for the pair + shp....Bob K2LGO Pse remove the (ns) from my address....

Kind of related to the new R-390 thread....

The Navy just contracted for new VLF and LF receivers
(boat anchors to be?) from DBA Systems of Melbourne FL.
(a subsidiary of Titan Corp, San Diego CA) and
Sechan Electronics of Lititz PA. The radios are for
subs (all types), sub tenders, and shore stations.

I haven't heard of any of these folks in connection
with radios of any kind.

How many RBAs can we round up?

>Tuning the SSB signal after doing the above should be done slowly but
>can be done and you will get better with practice.
>I hope this helps.

I have several old receivers and do not understand that SSB could be so
difficult to receive. Problem with some old receivers are that BFO is
not strong enough compared to the ssb-IF signal to the detector. The BFO
should preferably be 5-10 times as strong as the SSB from the IF.
Cure is to decrease the IF signal and increase the BFO.

I have always heard that product detector is neccessary for ssb
receiption, but one of my receivers* has envelope detector. IF is
divided into two sections with 2x 6BA6 and 6AV6 detectors, the BFO does
not leak into the AGC. BFO was increased to 5V and IF is 1-2VRMS. I
listened to several strong German and British ssb stns on 80 and 40m ssb
in the evening, it works ufb quality - even with the AGC on and full RF
gain.

I am surprised to learn that 6AT6 or 6AV6 has so good quality for ssb,
and product detector seems not too important to add.
*)German "Lorenz 6P203" AM/CW coast stn receiver, built around 1960.

Mark, the radio was probably the HQ-200...It was made in the late '60s
and was a lower profile than the HQ-110 to HQ-180 series...Dale KC2PZ

And you never know who you're bidding against.... Even if it's the original seller..shilling.

I know of at least one case in the RADIO arena where eBay found a man using multiple accounts to shill and booted him off...errr, well...almost. Many of us are sure he's still selling and probably shilling under another name. eBay now will do little about it!

wireless....

I agree that it is a sellers paradise there. Once in a great while you
can catch the bidders off guard as I did when I bought a radio from there. I
actually paid about the right price or maybe a little less considering he
also had about $150+ in accessories. The nice thing about ebay is that you
can check the sellers track record (if he does a lot of business on ebay).
This is a very nice feature that set me a bit more at ease. I was very
satisfied with that particular deal.

See Nov 97 issue of CQ for adding 160 meters. Currently running a quad of 572Bs. 900 watts out with 100 watts drive. Stock plate xmfr idles at 1650vdc and loaded drops down to 1475vdc.

Replaced the 866A mercury vapor rectifiers with K1AW 14kvdc 3 amp diode bricks.

Amp looks super nice. have manual. 80-10 meters.

Sell for $350.00 or trade for:

Drake B or C line gear
Ten Tec Corsair I or Omni C
Knwd TS-830S above 3 mil S/N

Buyer pays shipping from 92139. Not cheap. Weighs 110 shipped and boxed up. Will go UPS only.

2397. Help: HP180D Scope Sweep Problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-14 00:00:00 UTC
From: rich0261@aol.com
Message-ID: <1998091400373800.UAA00710@ladder01.news.aol.com>
Source record: 99107

Thanks! I know this isn't exactly a boatanchor question, but this is the best group around for information, and the scope is used for aligning them!

Well after more time than I care to admit I've got my HP-180D's HV powersupply back online. Seems like if its not one thing its another. I get vertical trace, varying with voltage, but no horizontal sweep. I have the 1840A time base and the 1805A installed in the mainframe. The 1840A's "Reset" light is continually lit. I don't have any instructions/schematics for the 1840A, so I'm hoping for guidance before I dive in. Anyone have any helpful suggestions, hints, or something simple I'm missing, before I go trotting down the roads less traveled?

Thanks again,

Rich

Bob's right
i've seen sites with 50 people having the virus and none realising it,
merely wondering why word was misbehaving!
Ron, the likelyhood is, there was no way the poster realised it was
infected.

why is everyone always sooo uptight in newsgroups? is it worth it?
no i'm not flaming anyone, merely slighly interested in radio comms.

matt

I agree. Almost all the dealers that sell their radios on Ebay fully expect retail or higher. Although I have purchased radios from Ebay. I limit my participation due to the very high prices. I mainly go for the stuff others are not interested in.

But clearly the dealers want NO LESS than retail, and are happy to get far above that. But in the final outcome it is us, the buyers, that cause this problem. No seller is forcing us to purchase their goods.

SO bid responsibly, and LET THE ITEM GO IF IT IS TOO HIGH. If we the buyers start to get this discipline, prices with retreat!!!

That's "my opinion on the subject..

2401. Free QSTs -- you ship

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-14 00:00:00 UTC
From: jvercellino@sprynet.COM
Message-ID: <199809140122.SAA02532@m1.sprynet.com>
Source record: 99111

I was given some QSTs and I've gone through them and I'd like to offer them up for free, you pay the postage.

There are some from the '60s, '50s and '30s.

So that everyone who wants them has a better chance at getting them, here's what I'm going to do. I'll take a mix of years and put as many as I can get into a Priority Mail envelope and send for $3.00. So if you are interested in getting some of these magazines, please send me a check or money order for $3.00 along with your name and address to the following address:

John Vercellino
6921 Springside Avenue
Downers Grove, IL 60516-3114

Please don't ask for availability of specific issues, etc. I'll give you a good mix, and if you're not happy with them, you can send them back and I'll reimburse your $3.00.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-14 00:00:00 UTC
From: John Wieder <jwieder@rmi.net>
Message-ID: <01bddf89$278e6940$110a5da6@wieder>
Source record: 99116

This is the one with a hand crank for the tape motor and 110v to power the built in cw practice set. Works good. Case is in very good condtion with just one tear (about 1/2 inch by 1/8 inch) in fabric on the bottom of the set so not noticable. It will need a cord as the old one was too shot to even try it out with. Will include the plug that came with it though. Comes with 6 paper tapes (5 of them in boxes).

Asking $55 plus shipping from Colorado.
Thanks 73
John K0JY

2409. Help Johnson Ranger I Oscilator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-14 00:00:00 UTC
From: cnord@snet.NET
Message-ID: <01bddf94$186a1080$35233ccc@default>
Source record: 99119

Ok I need some ideas.
Subject:: Ranger 1 with PTT mod in nice shape I picked up last spring to clean up and restore.
Problem: VFO works fine in "zero". I can even tune the rig up in that position. But if I move the switch to VFO or either of the crystal positions (with good crystals installed) no gird drive, no oscillation.
I've poked around, checked voltages checked switches and it all seems OK. I suppose I could run it on "spot" but that seems rather bogus. Accessory plug on rear is wired correctly. I have replaced the osc and buffer tubes with good ones.

But still no xtal oscillation and no VFO when I move off spot.
Any ideas ?
Thanks for helping this stumped and frustrated ham who decided years ago to major in something other then electronics...I pay for it with most projects like this.

Source record: 99126

This is not surprising. However, I doubt very seriously that it will be a tube radio, although. they may very well use the salient characteristics of the R-390, et al, in their RFP. It sounds simply as though the Navy, or whomever, is looking for a new HF receiver. No biggy.

Chris Pringle is a known Scam Artist.
I highly recommend that you avoid any dealings with
this individual. He is located in British Columbia, Canada.
I, along with a handful of others had bad experiences with him 2
years ago with regard to deals that went sour that transpired via
packet radio. I recently saw a post from somebody who
claims that he had been duped by Mr.Pringle so it looks like
he has resurfaced.

2422. Space Charge

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-14 00:00:00 UTC
From: Peter Daborn <daborn@sympatico.ca>
Message-ID: <35FD2D33.1000@sympatico.ca>
Source record: 99132

Hi:
i am looking for a data sheet for a 6AL5 twin diode tube which includes the Space Charge offset voltage (and/or current) specification.

i have a Heathkit IM-18 VTVM which uses the 6AL5 in a voltage doubler rectifier and the AC ranges are reading about half the true value. The rectifier drives a potential divider with a 22 M Ohm resister which i would like to design-out of the circuit, but this resister (along with 4 more 22 M Ohm resisters in series) forms part of the Space Charge offset compensation circuit.

i am also interested to know if there is any advantage in compensating the Space Charge offset from a high impedance source (as this circuit does) as opposed to compensating with a low impedance voltage source.

Thanks
Peter

2425. Announcing West Coast Triple CW Event

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-14 00:00:00 UTC
From: Casey Bahr <caseyX.bahrY@intel.com>
Message-ID: <35FD3750.830@intel.com>
Source record: 99135

OM, XYLs, YLs, especially FISTS members,

Sorry for the "spam", but I'd like to tell you all about
an upcoming special CW/code event on Saturday, September 19th!
Seems that the September FISTS Keynote newsletter that contains
our full announcement is going to be too late for the event,
thus we're trying to spread the word as best we can by other means.

From 2000Z on the 19th until 0400Z on the 20th, three
FISTS-affiliated clubs, K7FFF, K6FFF, and WA7YYY are hosting
a special CW event on most bands, including Novice segments.
The name of the event is the West Coast Triple, named for the
callsigns, three club states (OR, CA, WA) and the points awarded.

For current and future FISTS members each club contact is worth
3 points towards FISTS awards (9 points total!) and if you work
all three clubs (any band) and submit an SASE you can receive
our special WCT Certficate, suitable for framing.

All the details can be found on the K7FFF website, specifically

Hi All,
I have some equipment I would like to sell.

1. National NC-303 Receiver
With matching Speaker, XCU-300 Crystal
Calibrator, WWV. Is Very Clean and
Works Well.
$250.00

2. Hallicrafters S-41G "Skyrider Jr"
Looks good and works well.
$125.00

3. Hammarlund Speaker
It is in fair to good condition size
is 9 1/4" X 9 1/4" X 7 1/4" deep
$40.00

4. Ameco Code practice Oscillator.
$25.00

Prices plus shipping.

Reply to: boyd@humboldt1.com

Phone: 707-839-5228

Thanks,
Boyd W6DSB

They made quite a few models. Hq-100, HQ-110,HQ-170 etc . I had a 110 as
a novice. The 170 was quite popular. It was the big model of the bunch.
Not sure later than that. Would have to check old qst's. MK

Sounds pretty close to one I built with a 6V6 tube. Had to keep those mitt's away from the key contacts. I remember one dark winter morn I got up and decided to wk a few qso's. Was tuning the rig and let my palm touch the tune cap and a finger touched the var cap. Yowwwwwwww. Made rf zebra stripes on my finger. Didn't do that again. MK

Nahhh, they will fit. They are almost identical size. I have seen this
mod done by a friend of mine in a tr-4 but don't know the details. I'd
like to do my t-4xb that way. The 6146 a much better tube than the 6JB6
sweep tube. Also the lastest prices of 6JB6's are absurd. MK

This is one of the most appropriate and on-target comments about eBay,
and auctions in general, that I've ever read.

One kind of item for which eBay has actually improved the auction process
is phonograph records. The customary way for auctioning them has been
for the seller to send lists in the mail, and bidders submit their bid.
It's not a highest bid with a proxy system like eBay--what you bid is
what you bid. You never know if you're bidding high enough or not until
it's over. And you don't know if you're bidding way too high or not.
eBay has actually improved the auction process in this one regard.

2432. Nye-Viking MB-V-A 3KW tuner swap/sell

Hi- I have a Nye-Viking MB-V-A 3 KW tuner to sell or to swap. This tuner is like new. Has forward and reflected Wattmeters which automatically change to the high power condition when the power level increases above 200 Watts. Built in antenna switch and built in balun. Simple to use. New it was around $725. I'd be interested in a swap to a ten tec 2KW automatic tuner, or mybe a HF xcvr. 73 de Dave in NH

>Conversion Handbooks.

It's a nice AM/CW superhet receiver, about the same size and weight of the RAK, but with a direct reading dial. I own a RBB and RAK. I have not looked at the RBB for a while, but think it covers 500 kHz to around 4 MHz. The companion RBC covers the remainder of the HF band, up to about 20 - 27MHz. May be a little off on frequency ranges. Both use separate power supplies. Can't comment on price. You don't see them very often, so it's a function of how quickly he wants to sell it, and how much you, or someone else wants to buy it. There's not a great demand for them.

Hi all, and thanks for reading this.

The Southside Amateur Radio Society web site has just been updated, new features include:-

The September Newsletter (down loadable),

The makings of a VK stolen equipment page

Updated member list with Email and personal web pages.

Updated links page (small but growing)

And of course the 1 kW linear project by VK4YE.

We hope to make this a premier site with good content so please pay us a visit and tell us what you think... just leave us a note in our guest book. The Web address appears below.

2438. Radio Manufacturing Engineers (RME) model "A" ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-15 00:00:00 UTC
From: David Mckee <davidmk@us.ibm.com>
Message-ID: <35FE62C4.59694546@us.ibm.com>
Source record: 98931

I have in my possesion a RME receiver and transmitter. The receiver says it is a RME Model "A"
with a serial number that starts out CJxxxx (where the x's are numbers that I can't recall here at my
computer console...). The radio looks like the left half of a RME 69; same big dial face, but just one.
It has 2 exposed tubes and two with a metal sheild. One of the tubes is very strange in that it glows
purple!

What the heack is this thing? When was it built? Can I get specs? I looked in the Hi-Manuals catalog, but there is no listing for a model "A". Any ideas? I would appreciate it.

The transmitter is even weirder in that it contains a sideways transmitter tube that is shaped more like a ball with two electrodes on one end and a could on the other, and it uses a Dynamotor to produce the 700volts DC that it uses.

Any info at all will be greatly appreciated. Thanks!

Source record: 98936

Robert:

I believe your radio is a S-77A and was produced from about 1952 until 1955. It is an AC/DC version of the much more popular S-40B. I suggest you replace all of the paper and electrolytic capacitors in the set. You will probably clear up most of the problems just replacing the caps. While you are doing that, check the resistors and replace any that are over 20 percent off. Clean the band switch and if band 4 still doesn't work, try a new 6SA7. Once the set is playing OK, you may want to do an alignment. You will need the manual for that.

Hi Manuals is a great outfit and should have your manual. I recently restored an old Hallicrafters S-40A and found most of the paper capacitors to be bad. Leaky caps can cause distorted audio, loss of AVC function and a host of other problems. Don't try to test them, just replace them with new, modern capacitors.

Best Regards,

Ed

The BC-639 is part of Radio Sets SCR-563 through -567, -575, -633,
-634, -637, -644, 645, and AN/CRC-2. It's main mission was
as VHF receiver for Fighter Control and Command by the
U. S. Army Air Corps during WW-II.
It tunes 100-156 MC AM/CW/MCW.
Designed for fixed-station installation
or in truck-mounted portable shelters. Most often used with
BC-640 transmitter. It is an authentic WW-II historic set
and would be right at home in a restoration of a 40s-early 50s
air traffic control tower or center.

2450. Do The Valiant & Halli SX-101 Match Up Well?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-15 00:00:00 UTC
From: DavidC <davidc@bit-net.com>

I am thinking about setting up a classic operating position in my shack, reminiscent of the stations I dreamed about as a kid. I am leaning towards a Viking Valiant & Hallicrafters SX-101 pair. Comments on their compatibility, a preferred t/r switch arrangement, and if the big chrome Shure 55S studio mic (sometimes called the Elvis mic) is a good AM mic. I'd also appreciate a sense of what a fair price is these days for a Viking Valiant (guts intact and OK, outside acceptable, non-original knobs OK) ... there is a big Hamfest here in NH in October and I may look for one. -- Thank You! & 73, DavidC AA1FA

An HF receiver is just one minor piece of electronic equipment
used on board a modern warship. Are they planing on replacing all of their
electronic systems with BA vacumn tube equipment?

I guess they will bring back the sextant and celestial navigation
to replace the GPS receivers...

It wouldent be a bad idea to bring back the sextants in the event
of satalite failure. But they quit training the middies to use
them....

The BC-639( ) is a VHF receiver used with the BC-640 transmitter. It uses an acorn tube for the front end and oscillator. The bandwidth is about 10 kHz. They run off 6.3 volts and the standard 250v @90 mills. If you like to monitor the civil aircraft band their fine, and you can slope tune FM. The "collectable" ones have the british "crown" emblem on them. There is also another BC nomenclature... something like BC-1003... or the like. Same receiver. I think I still have the schematic, etc. Good luck.

Certainly! No problem at all. You'll need a Dow-Key (or sub) type relay with external contacts for receiver muting, but that's all! We'll be listening!

Hi David,
I use the Shure 556, which is the big brother to the 55S, with my HT-32.
I've gotten many comments of "great audio." I've tried other hi-z
microphones, but people tell me this one sounds best.
I also use an SX-101A. I've never had a Valiant, but can't imagine it
being difficult to do the TR-switching with any rig since there's a place on
the rear panel to use a relay in parallel with the receive/standby switch.
The SX-101 is not the best receiver performing receiver that I've owned,
but it is my favorite. The notch filter works surprisingly well, and while
the different bandwidth filters aren't as sharp as crystal or mechanical
filters, I prefer the sound of a filter with a gentler rolloff curve. My
101A isn't as stable as some other rigs, but not bad for a 36 year old
radio. I'm 36 and not all that stable myself!
73 and have fun!

2468. Operating On AM -- Using a MFJ-259B

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-15 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bde0f0$df304f60$de8492d0@davidc.bit-net.com>
Source record: 99011

This following text comes from the AM North America "Operating On AM!! Some Basic Procedures and Guidelines" web page located at: http://www.bigcountry.com/w5ami/Articles/Operating_AM.htm

I am wondering if a MFJ-259B (I know, heresy) is appropriate to fill the role of both the Frequency Counter and Frequency Meter?

-- Thank You! & 73, DavidC AA1FA

Frequency Counter

Not required, but recommended.
In our present times, with a limited area of AM operation on the bands, a counter can help keep you from being griped at by an adjacent QSO.&#65533; Some old transmitters will begin to drift up or down in frequency as you transmit.&#65533; The counter will let you know if you need to make minor adjustments to the VFO as you continue to make your transmission.&#65533; You can overdo it too.&#65533; If you drift down 100 cycles, forget it!&#65533; Now when you start getting a kc or so away from your original frequency, that's the time to bump the VFO back to where it should be.
&#65533;
Frequency Meter (spotting device)

Actually a freq. meter is not the same as a counter.&#65533; A frequency meter will produce a weak RF carrier that you can hear on your receiver to use as a spotter so you can setup on a specific frequency.&#65533; If for instance you have a schedule to get on 3.885 and no one is there yet, you have to have a way to zero beat the frequency to make your call.&#65533; You could just transmit and watch the counter to adjust the VFO accordingly, although that's not a good operating habit.&#65533; It would be much better to be right on, or very close (within a couple hundred cps) to your desired frequency as soon as you key the rig.

The military surplus BC-221 frequency meter is one of the best I know.&#65533; You can find them at hamfests for $10 to $15!&#65533; They have a very accurate analog dial and chart to get you right on the spot you want to be.&#65533; I have mine coupled to the freq. counter for even more accuracy.&#65533; Make sure you get one with a power supply unless you want to build your own.

Oh man ..... that was MY rig during the mid/late 60s when I was in high school. I couldn't afford an SSB rig and was thrilled to have that combo. For antenna switching, I initially used a Dow-Key relay and later installed the E.F. Johnson electronic T-R switch for full QSK. Oh boy ... it was sweet!

The best part of the Valiant was throwing the high-voltage switch. The whole operating table would shake with that unique "thunk". Wonderful memories ... wonderful. I used an Astatic D-104 on 40m and especially 10m AM. Those 6146s in the plate modulator really made for a beautiful AM signal.

Thanks for asking the question and bringing the memory back!

Dont worry so much about the collector who already has one or more of
these, there are more of these and others out there waiting to be found
at much less than top collector prices. Being in the right place at the
right time is the key. Get to know your fellow collector, and join a
club or two. (Antique radio clubs and ham clubs) If you like going to
garage sales - ask the seller if he has any old radios - you would be
surprised at what turns up. Advertise in your local paper for old radios
and specify what brands you like to deal in. Getting lucky is fun!.
(Thats what Sally told the sailor anyway).

Whine...Whine...Whine.... how about some cheese with that wine.
If the price is to high don't bid.
I love eBay, for buying and selling.
Might have to wait and watch for the deals
but it is worth it.

Hello, I have the following literature that is out of print,
and very hard to find. These are very high resolution LASER
monochromatic reprints of the rare originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices INCLUDE POSTAGE, in the
continental USA. Others by actual quote.
Thanks, and if you need tubes, visit our sister screename,
Tubecntral@aol.com

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2,069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"
price update for Dec. 6, 1946.Another excellently illustrated info
source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951
25 pages crammed full of information IN DEPTH! Has everything you
ever wanted or needed to know about running these tubes, a real

nicely illustrated easy to understand manual, Price 10.00

Source record: 99032

Hello gang,

Yesterday I was fortunate enough to be inside a 1950s working mobile Radar van at a local military air base (Manises, Valencia, Spain; Wing 11). This base is going to be dismantled in a couple of weeks, so it was the last opportunity to look at those nice glowing tubes (somebody told me there are near 2000 tubes in the set, but I didn't count them ;-)). That radar assembly, model AN/MPN 11D is used to safely land Mirage F-1 combat planes. I was able to get into the cockpit of a (landed, of course) Mirage F-1. Wow!!!. It should be as difficult to manage as Windows 95 ;-)!. So many knobs, buttons, switches, indicators, ... I really admire pilots!.

Yesterday, they had scheduled a night flight. I was at about 30 meters of the runway, just where the planes take off. It was a really astounding experience!. BTW, one of the pilots did a nice take off, with a very high elevation angle, as he knew we (just three visitors and five ot six military men) were there. Incredible!.

Well, come back to BAs!. The radar is mounted in a truck, with two different sections: one is for storage/repair and part of the power supply, and there is a duplicate of each rack-mounted radar assembly (about 25), in working order, to fastly replacement in case of failure. There are lots of spare tubes, relays, ... The power supply included some three phase elements, a BIG 28VDC selenium rectified PS and some other gear.

The other section of the truck, which has air conditioning at about 14 degrees C (cold place!!!), has the working radar, with a soft light illumination. Six big round CRT displays, in groups of two, enable three simultaneus operators. We watched the evolution of the military planes and also some commercial ones. I could see, by opening some front covers, hundreds of glowing tubes!. Nice view!. And the final power amp (X-ray warning!), looked just so pretty... I asked to the technicians about the reliability of that radar: 90,000 approximations in about 40 years, with a very low failure rate and no plane crashes. Not bad at all :-)!.

The antennas, apart of the usual rotary parabollic offset reflector, included some small discones (UHF) and some vertical antennas (VHF), which where used to communicate with the planes and the main control tower. By the way, all the VHF and UHF gear is not of same vintage as the radar assembly. But I estimate near 75% of original gear (including a 1 meter tall oscilloscope!).

Then I went to a separate storage area and saw _lots_ of NIB tubes in shelves (I can remember just some: 304TL, 3B28, 807, 829B, magnetrons, thyratrons, lots of miniature types, ...). There were also hundreds of encapsulated relays, oil filled transformers, sub-assemblies, ... And they

used no less than a TV-7 tube checker :-)

Sad part of the story is that ALL of this is going to be _trashed_ in some days :-(. Including spare tubes and parts!!!. Yes, here in Spain there are not military surplus sales. Things are just smashed or stored... to be smashed in the future... No, I have no military relatives to help on this :-(

Well, hope this report has not bored you too much!. It has been a very interesting experience for me. I had never saw so many glowing bottles working at once... and working so fine!.

Best regards from an (still) impressed boy.

2495. SEEKING BC-342 CW-OSC Knob and FT-162 Mount

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-16 00:00:00 UTC
From: "R.A. STALLS" <bc348@sprintmail.com>
Message-ID: <6tou6f$es1$1@ash.prod.itd.earthlink.net>
Source record: 99038

I recently acquired a very nice BC-342 missing two parts.

The first, and most important, is the BFO Knob, described as black, fluted, 3/4" by about 7/8" diameter (not exact - my measurement of the apparently similar sized antenna knob) with an arrow on it with "CW-OSC" above the arrow and "ADJUST" below it. The printing is arranged like this:

CW-OSC
>>----->
ADJUST

The second is the FT-162 mount. It's a flat rectangle with a small retangular opening in the center, rounded corners, 18 inches by 6-29/32 inches, with a shock foot on each corner with a notched point that goes into the bottom of the receiver cabinet.

Thanks,
Tony Stalls, K4KYO

I agree, the ending bid's on all the good stuff is very high....
You said
>"bid responsibly, and LET THE ITEM GO IF IT IS TOO HIGH." "If we the buyers
>start to get this discipline, prices with retreat!!!

I don't see this as a reality...Remember eBay is an "Auction Block"... I sold a used rig for $280.00 more than it was worth if you were to get it here in the US... You see we are the "Tijuana" of some other countries who will pay higher than retail. And the're those who simply can't get to some of the more popular items (or used) where they live... Like..... Grandpa can't drive, but can get a check/MO to someone, and is more than willing for the convienence to pay the asking reserve...etc...etc...etc. And as a matter of fact... Ham is almost a dead sport here where I live and the closest Ham Radio Outlet (the ONLY one) is 80 miles away, and they don't always have what I need, and talk about paying retail!!!!...Sheeesh!

YES!!!!!VERY VERY FUNNY!!!!
This one is my favortie!!!!
>>>"Works great! I hooked up a wire and power and it (baked bread, sliced bread,
>>>no-stick, shined brightly). Sold AS-IS..."<<<---

I can hardley believe someone trying to sell something would make the
statement "stuck a long wire where the antenna is suposed to go and keyed it
up, talked to another radio accross the room...bla bla bla... SOLD AS
IS!!!.... !!!!!!!!!!!!!!!!!!!AND SOMEONE ENDS UP BUYING
IT!!!!!?!!!!!!!!!!!!!!!

Pat!

Have a chance to acquire a Galaxy V MkII for the cost of a lunch. Inside it is very clean. Outside could be restored to excellent with a little work. It is supposed to be functional. Are these old timers any good, or should I opt for pizza instead?

2503. FS: D-104 Microphone & Chrome "G" Stand

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-16 00:00:00 UTC
From: wetartie@ix.netcom.com
Message-ID: <N.091698.160459.04@vna-va10-43.ix.netcom.com>
Source record: 99046
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Astatic D-104 (chrome-plated "lollipop") microphone, with matching Astatic "G" stand (also chrome-plated). Both in excellent shape, the "classic" microphone of the 1960's hamshack with the "classic" chrome-plated "grip-to-talk" bar on the side of the "G" stand. This chrome-plated combo "shines" beautifully, and would be a treasured addition to any hamshack. Only reason for selling is that I have two of them, and only need one.

Will sell the D-104 mike and "G" (push-to-talk) stand combination for $45 plus $5 shipping in the U.S.

73,

-bill

> slay@netcom.com

Truth be known, the Valiant audio is not all that great. Look at a stock one on a scope. Electric Radio magazine, however, has a group of modifications that really work well and don't require a great deal of special parts. In particular the clipper circuit is removed completely (it never worked) and the LF response is much improved, as it mod symmetry. I swaer by my Valiant I. Just be a bit selective when you buy (if you can!). Excellent V-1's go for $375-$450, unless you one of the lucky ones.

Only half correct. It does not have 160meters. It DOES have great quality AM, equivalent to the HT-32. It doesn't eat transformers as bad as the HT-32 either.

2520. NEAT ZENITH DEALER SIGN

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-16 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36008353.183@ix.netcom.com>
Source record: 99063
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I recently acquired a really sharp Zenith
dealer sign. I recovered it from the estate of
a gentleman who had a radio shop in the 30s-50s.
A photo of the sign can be seen at this link:

http://pw1.netcom.com/~arc5/sign.jpg

The sign is 18 inches wide by 10 inches high.
It is made of what seems to be a tough kind of
front-and-reverse-painted, vacuum-formed plastic.
The back is very heavy cardboard stock with a stand.
It is in excellent shape with little wear and
only a few very small edge breaks. None that show.
The sign is slightly concave. I don't know
if it was made that way or if it's from age.

I wonder if anyone knows when this sign
was issued to Zenith dealers?
Also- what can I put on this old plastic to protect it?
Just leave it alone or is there some compound available?

The sign looks really cool sitting on top of my
completely restored 8S531 (My favorite.. ;-).
Now if I could just find one of those Zenith wall clocks...

Regards,
Dave Stinson

Looking to replace missing manuals on the Red Oak Victory Ship, which is being refitted as a operating museum!

need the following manuals:

Scott rcvr, SLR-F
Mackey FT-106
Mackey Radio DF
RCA Radar

These are all 1944 vintage original equipment (I think).

Check out a web page:

http://www.pointrichmond.com/rosie/redoak.htm

Thanks: David KC6SSF
(son of W6KNO)

I use Windoze at work because they pay me,
I use Macintosh at home because I want to.

Message-ID: <6tra0a$o6r$1@samsara0.mindspring.com>
Source record: 98945

Anyone out there parting out a National 183D ???
I need IF transformers T6, T7, and T8.
Tnx and 73 !
Greg KX4R

2527. Info on BP2-A5

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-17 00:00:00 UTC
From: obelia@webtv.net
Message-ID: <18158-360137D6-28@newsd-132.iap.bryant.webtv.net>
Source record: 98946

I picked up this radio yesterday at a junk shop and would like some info. if anyone has any to share.
Made by Templetone for the U.S. Army
(Signal Corps order # 25085-PHILA-44-03)
Covers BC & SW (5.5 to 18)
Case is OD painted wood.
Its appearence is very much like a commerical portable from the mid forties.
Thank you in advance for any info. you may provide.

CHEERS & GOOD DX.

2528. Atwater Kent Manual FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-17 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36013B68.18E6@ix.netcom.com>
Source record: 98947

For Sale:
Nice, leather-bound original Atwater Kent
service manual. Most of the sets from late-20s
early 30s. Nice condition considering age.
Pages are good and useable, though they
are old so you have to treat them with respect,
like any old book.

Photos available at:

http://pw1.netcom.com/~arc5/akbook.jpg

The price list in the back isn't as nice as someone
tore a few of the price list pages.
A very nice reference.

$55 plus shipping from 78728 or will
discuss trades for interesting military radio stuff.

Regards,
Dave Stinson
arc5@ix.netcom.com

I agree with you for the most part, but I had both a Valiant and a
Valiant II in the 60's. USing the clipper seemed to enhace the audio.
I would appreciate it if someone would tell me exactly what is wrong
with the clipper circuit, if it is used properly. Thanks.

2530. Navy Flameproof Key

Newsgroup: rec.radio.amateur.boatanchors

Doesn't smell right to me either, Terry. That's not the first time I heard of similar situations. I keep away from ebay...scared of being manipulated, I guess.

I never bid on ebay until 10 minutes or so before the close. That way,
I don't hekp to drive the price up unnecessarily. Then I bid the max I
am willing to pay. Result - I'm never disappointed.

2536. FS: Speed-x key

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-17 00:00:00 UTC
From: Benedict <benedict@ideasign.com>
Message-ID: <3601809D.3EF2@ideasign.com>

That just happened to me also last week, I bid double the
existing bid ($200)days before the bid closure!! Wierd
But then it could have been the RIGHT pricing.
I think I will concentrate on selling and get the best of
things!!!
Art KB9MZ

2539. BIG LIST of TUBES F.S. Updated 9/17/98

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-17 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <19980917170713.24885.00000745@ng138.aol.com>
Source record: 98958

Hello, I have the following tubes ready to go, all are
NOS original box, unless stated otherwise. Orders above
50.00 get free shipping in the USA, and reasonable shipping
elsewhere. These prices are good for 14 days from the date
of this post. THIS IS JUST A SAMPLE,If you don't see what you need here,
or have a question contact me via Email. Free Gm matching on pairs,quads,
etc. EVERY TUBE I sell, I'll back up..NO junk for sale here, but
if you want, I have plenty! Accurate readings on my TV-7 D/U's or
Gm readings on my 600A available apon request (within reason).
Sorry, no site or HUGE list {yet}.
Thanks to all!

I'm not saying anyone at the Ebay organization is manipulating
pricing. However, I think it's highly possible for someone with
extensive computer skills to "hack" Ebay's system to find out what the
maximum bid might be before the close of bidding.
Oh, well, enough discussion...again, I just want to let people know
about my experience. Sounds like there have been quite a few similar
experiences.
Bet I get flamed again several times just for talking about this.
Seems I irritated a few folks with my first post.
Terry

BK>Date: Thu, 17 Sep 1998 19:33:19 GMT
BK>Message-ID: <6tro5v$kh4$1@nnrp1.dejanews.com>

BK>Does anyone know what a navy key No. CMI-26003A is worth. I am just getting
BK>into ham radio and I keep running into this stuff.

Memmory is a wonderful thing.
I used to be employed by Collins Radio Co and was manager of the Customer Service Dept in the mid 80's for the Dallas division. We had a Navy Airborn program which had been delivered with those keys specked (flame prof desing dateing back to the 30's for use in aircraft). When the system was designed in the mid 60's the key was avallable as an off the shelf item) . When we got an order for a key and one of my contract mangaers prepared a letter for me to send to the navy telling them we could not supply the key to them becase the last builder had quit production, i questioned why no one could build a key! As a ham; and an engineer with the illusion that my dept should support a program if it was at all possible , I contcted a freind who was an engineer for the Navy at the Lakehust NJ Air Station where the key had been desinged and the specs were writen for it. He got copies of the blueprints for the design and sent them to me to use in attempting to obtain vendor quotes for a custom build.

This revealed why some govt spec spare parts cost so much compared to the expectations of the civilians who do not deal with mill specs.. The drawing set for building that key was 27 "d size sheets" and there was a text spec that accompined the drawings defining the qualification testing and production tests that the key was subjected to. I then went to the history of purchase files and found that years before when Collins had last bought keys for the installations in the aircraft that we were outfiting; that we had paid the last vendor making them some $600 + dollars for each key. At the time I felt that the continuation of that design into the future did not make much sense.

I initiated action to run an engineering change proposal against the system design and got it processed by NavAir and approved by all brances fo the anvy that were then current users of the design. EF Johnson had a desing that was functional in our use (not flame proof) and we then sold the replaments for the nominal markup on a key costing us about $25..

I had one of the old keys that I had obtained back in the 50's when I first became a ham and appreciated it more after that experince...g My recolection

was that I did not really like the pump-handle action it had, but it was a good key to bolt to the top of the desk or side of the pilots position and could be contolded well in rough conditions. I could not have qulified with it as an RM as those guys had to send at 18wpm with it so it was capable of fair speed.

Value of something like that is in the eyes of the seller and buyer and is by mutual agreement. But for what it is worth I perosnly know what it may have cost the US-govt...g I also think I paid about $3-5 in the 50's when I got myself one. The key is made like a swiss watch and the contacts are sealed inside a flame-proof enclosure so that using the key on a hv-cathode keyed circuit with a significant current would not ignite gasonline vapor in the cockpit if the key had to be used in a disabled aircraft. I hope you would never need the keys features, but some key collector may feel that the key is worth adding to a collection. Note that they were not uncomman years ago so many must still be around. I know fair radio carried them in their catalog for years, and may still do so.

2558. Re: Hallicrafters HT-37 -- Poor AM & Missing 160m?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-17 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19980916215850.07085.00000389@ng38.aol.com>
Source record: 98977

Neither the HT-32 nor the HT-37 have 160m. That aside, the HT-37 is a "cheap" copy of the '32. On the other hand, the stock Vikings do not have "good" A.M. But the goals have changed over the years. When all of these rigs were current, the goal was communications ability. Nowadays, the drive is for great audio. As any modern rice-burner will demonstrate, audio with a speech processor in use is not nearly as natural sounding as unprocessed audio. Nevertheless, I use the processor when the pile-up is stubborn!

Hi,
I would like to post some really neat pictures of "Boatanchor" operating positions on my webpage. If you have a great vintage shack JPG of "your" shack and would like it to be included with my collection, send me an attachment of your operating position and I'll include it. Especially looking for great design and configuration. Also if you have an interesting QSL that reflects your interest in older gear I'd love to post that too. I know there are boatanchor sites on the web, but I'd like to show a collection of very special shacks, either by theme or layout.
Please include your name, call and QTH and any special info you'd like to.
Thanks in advance and looking for your shack picture!
73,
Jack

I am posting this to three newsgroups where this individual has posted in the last month with items to sell/trade.

I am looking for info on a person who goes by Densil Clark / aka Ross Clark / aka Russ Clark / who uses the following email addresses:

yukontrapper@yahoo.com
yukon@anet-stl.com
nanook@anet-stl.com
yukon@arcticmail.com

I sent him $200 for an item and he sent me nothing in return. I have found two other folks he's done this to also. I am in contact with the Postal Inspectors and am looking for anyone else with information about him, or who would also like to file a complaint. His mailing address is in Chesterfield, Missouri. Thanks for any help. Please email.

HI Bruce my suggestion is to go look in a mirror and decide if you really need the lunch or if you would rather have a piece of amateur radio history. Please don't be offended cause if I did the same thing I would have room for alot of radios HI HI. I have not owned a Galaxy V in fact I only have one WRL piece of equipment and I just bought it a few months ago. It is a Meteor 175 DSB transmitter. I have a number of old tube type transcievers and they beat the pants off the solid state stuff for sound and durability. Don't get me wrong I use an Icom 706 mobile and have a couple of Icom rigs at home plus a few of their handy talkies but I will still go to the Collins rig or one of the Nationals when I have the chance. YES you can find parts if you look and YES!!!! you can find tubes without looking very hard. I have heard a number of our locals tell new folks to stay away from the tube type equipment because you can't find tubes.BULL I just retubed a Collins KWM2 and a Collins 73S-1 and an old EICO 753. Yes you can find tubes... Skip the lunch if you can't let me know I will send you a couple of bucks to buy the radio and you can eat your way back HI HI. Come to think of it I believe I will try that approach with the XYL maybe I can get that other boat anchor. HI HI 73's good luck with your NEW Galaxy V. Any questions let me know 73's Larry WA9VRH

From: duckman_osu@ionet.net
Message-ID: <3600810e.54696910@news.ionet.net>
Source record: 99072

Hello, All!
I recently obtained a "T-46" throat mic switch. It is a black switch box worn in the middle of the chest, attached by two adjustable olive drab straps...one around the neck and one around back. The upper wire will plug into a T-30 throat mic and the lower wire has a PL-58 three prong plug on it. The switch has three positions- ON-OFF-ON(continous) and looks like a regular toggle switch.
Can anyone tell me what aircraft/radio system this switch would have been used on. I have found no references to this switch.
Thanks!

Dewayne "Duck" Moore

I used the predecessor (Galaxy III) for many years and have used the successor (GT-550) as well. I have a V mkII waiting for restoration. They can be fine basic radios once you get them into shape. Like any discontinued radio, you may have to make a repair from time to time since you can't just ship them back to the factory! If its so cheap, I'd grab it and have some fun fixing it up & using it. One thing, though, owning a bit of history like that, not many ops on the other end of the QSO will recognize your station description!

2572. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6tqcij$l80@news.Hawaii.Edu>
Source record: 99077
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

A Valiant will typically run you from $200-300 but I have seen them for less, depending on condition. I have owned two now. They take some care, and it is good to replace the 866 rectifiers with 3B28 tubes, and replace all of the electrolytics and paper capacitors. You also will want to bypass the clipper circuit (takes all of 5 minutes) to help the audio. I paid considerably less than the "going rate" for both of mine, but they needed a little work. It pays to shop around.

Hello collectors and historians,

Due to a career change and an impending move, I am forced to liquidate a major portion of my 12-year collection of vintage hi-fi equipment, antique radios, workbench test equipment, and very old radio parts including early AM transmitter parts. I have separated the large quantity of items into three lots of related equipment/parts. The lots are an excellent choice for the newbie or student and should provide many hours of learning and enjoyment.

All lots are for pick-up only in the Davis, CA area (near Sacramento). All items described in working condition have been tested within the last 3 years.

LOT #1: Vintage vacuum tube Hi-Fi equipment
PRICE: $450

Fisher model 800-B stereo receiver. original Fisher 7591 output tubes. separate AM and FM tuner dials, each with CRT tuning eye. With original wood cabinet. In good working order. missing 5 knob caps and has a few minor spots on the faceplate.

Pilot 602M. approx. 18 WPC, 6BQ5 P-P outputs, stereo, w/ FM tuner, integrated amp., various phonograph preamp settings for different pickup types. Unique, and works well.

Heathkit EA-1 mono 18 W hi-fi amp., 6BQ5 output, w/integrated preamp., switch for selecting various input types, works well.

Harmon Kardon "Prelude" mono, 6V6 output, integrated amp., switch for selecting various input types, works well.

Harmon Kardon "The Lute" stereo integrated amp, 7408 outputs, 12AX7 preamp. less tubes.

Stromberg Carlson mid-50's 6L6GC P-P mono P.A. system amp. nice. good working order. 12AX7 preamp. 5 independently preamplified input channels.

Eico AF-4 stereo amp. parting out. missing xfmrs. has all knobs and chassis parts.

Eico FM tuner HFT-90 w/CRT tuning bar indicator, works well.

Bell 2122-C Mono amp. 6V6 output. various phono preamp settings, tuner, aux (integrated preamp). Works.

Bell 2255 Tuner. AM-FM/FM-AFC all tube. untested.

LOT #2: Misc. Antique Radio and Television equipment and parts
PRICE: $250

1948 Motorola VT-73 television, complete and in very good cosmetic condition but needs repair. It almost works. Comes with SAMS photofact service documentation.

Philco D-597-124 AM radio, all tube, c.1960. great sound.

Lafayette model KT-320 shortwave receiver w/matching speaker model HE48 w/Q-multiplier, 550 Kc to 30 Mc continuous coverage, IF gain control, antenna trim, ANL, REC/SEND switch, TA-AR c.1963. works. may require alignment.

Johnson Viking II AM transmitter with tubes. In seriously rusty condition.

Several 1920's balloon type radio inductor coils w/green cloth-covered wire.

Boxes of several hundred assorted miniature, GT, ST, and other types of radio and tv tubes.

Also included in Lot #2:

NOS National coil forms, NOS 1930's Aladdin radio inductors and IF xfmrs, Ceramic tube sockets including those for large AM xmtr tubes, knife switches, 12V automotive vibrators, 1920's audio output transformers, HV glass transmitter capacitors, HV mica transmitter capacitors, very old microphones, ceramic plate caps, ceramic standoffs, old D'Arsenval meters, NOS twist-loc electrolytic capacitors, , boxes of assorted rotary potentiometers, old laboratory decade capacitor unit, lab capacitor bridge unit and other interesting parts.

LOT #3: Radio and television test equipment and misc. electronic items
PRICE: $250

Panoramic SPA-4A laboratory RF spectrum analyzer 10 Mhz thru 44 Ghz coverage in 6 bands and 4 inputs, 3 of which are waveguide inputs. Very nice beefy unit. Contains super high quality adjustable Klystron cavities and drive mechanisms. Was working well until it developed a power supply fault in the RF unit last year.

Orion RF signal generator, 50 Mhz thru 400 Mhz in 3 ranges, with FM test tone generator and FM input, adjustable FM deviation. Works well.

HP 120AR 5 Mhz single channel all tube oscilloscope. Unique blue phosphor screen. Very high impedance input. 19" rack mountable. Works well. Great for audio.

Heathkit IG-82 vacuum tube sine-square function generator, 20 Hz thru 1 Mhz in 5 ranges, 0 thru 10 Vrms output in 4 ranges.

Also included in Lot #3:

a late model Fisher 100 WPC digital receiver (w/surround features, etc.) needing output work, an H.P. laboratory standard dB meter, a 70's vintage T.V. alignment analyzer/calibration standard, a working oil-filled radiator, and more interesting and educational electronic stuff.

Please reply by e-mail or telephone me at (530) 753-4837. I'll be happy to answer your questions.

Cheers,
Mark Chang

2582. Re: Hallicrafters HT-37 -- Poor AM & Missing 160m?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-17 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19980917082540.28749.00000527@ng-fd1.aol.com>
Source record: 99087

Yes...

an accurate assumption. The HT-37 transmits
DSB with carrier as supplied by its balanced
modulator. The HT-37 uses "phasing method"
in SSB generation versus "filter method"
in the HT-32 series.

Speaking from experience (I own them all)...
the HT-37 transmits acceptable AM...although
only about 20 Watts of it cleanly. An amp
is almost a neccessity. I run mine into an
SB-200 to produce 150 Watts output. Works
OK with a D-104 mic.

However, a Valiant will blow it away with its
fully plate-modulated envelope. The HT-37
and other exciters cannot develop the
power in the sidebands (and thus, apparent
loudness as detected in a receiver) as
compared to a plate-modulated transmitter.

But...The HT-37 works nicely on SSB. It
does a very respectable job on AM when
used with a linear amp. Yep, no workee
on 160. I have $75 invested in my HT-37...
for that price versus what a Valiant runs
today (maybe twice that)...it does OK.

Thanks to all for the kind responses.. I've learned alot about these tubes in the past two days.. Please excuse my naivet'e with regards to these large RF amplifier tubes.I'm learning more everyday. I'm starting to amass some transmitter stuff, so as I go, i'll get some together and post them for you. By the way, I contacted RF parts, and they were out of these. They had some Triton 4-1000A, at 880.00 each, but no Eimac. These two that I have look pretty good, none of the browning and loose material within. I will be getting my basing manual back from a friend on Friday, so I will be taking an ohmmeter to it, to get at least a cursory idea of their health. Meanwhile, a gentleman has offered to test them in circuit for me, and if all is well I will entertain the best reasonable offer on one or both. One even has the finned cap on it. Again, thanks to all for their insight.
Thank you,
Joe Pratt, Tubecntral@aol.com

I've only purchased one item on Ebay and have the feeling I was taken.
I went by their information to state your maximum bid (which was
supposed to be entirely confidential) so I set mine at just over
$100.00. About an hour before the bidding closed, the high bid on the
item was $65.00. The minimum bidding increments was at around $2.50.
There was no more bidding until just before bidding closed and amazingly
enough, somehow, someone bid less than $2.50 under my maximum bid. I
don't know if it was coincidence or not but it just didn't smell right
to me.
I got the item which was in very good condition. I'm not whining about
paying too much for an item, I'm just stating what happened so others
will be wary of Ebay.

After reading most of the thread about ebay prices and problems, I suggest you give ONSALE a try.
http://www.onsale.com/

I don't work for them, or get any type of compensation...I'm just a happy bidder/user.
I've bought 3 items, had problems with one (returned it to the company that sold it, and got a higher grade piece in return).

Unlike some other auction sites, ONSALE goes out of it's way to lay out exactly WHAT the item is, whether it's new or refurbished, who-covers-what in terms of warranty and repair, and when it is shipped.

I'm looking for a Hallicrafters SX-28 (or was it SX-27?) Super Sky Rider Receiver. I had one of these boat-anchors about 25 years ago when I was a young lad. I remember the tuning gears broke and being young and stup...,well you know what I mean, I wound up trashing this great radio! I guess I'm interested in this radio as it was my first "real" radio to tune in the world! Any ideas where I might locate one? Although shipping charges will probably kill me!!! As I recall this baby was a true anchor weight!! Thanks.

2599. What is this Collins PS for? (Collins 426A)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-18 00:00:00 UTC
From: scott coburn <scott@bnl.gov>
Message-ID: <36027B94.F51E4587@bnl.gov>
Source record: 98705

I have what looks to be a power supply built by Collins. I got it with some other stuff which I bought from a surplus outfit. It is a Type 426A, and is serial number 117. I am curious what this unit was a part of. I don't have much of any use for it so I am looking to sell it, but would like to know a little more about it before I do.

It has a 120VAC/60Hz power input, and +150VDC and +300VDC and 6VAC outputs. It also has inputs for AVC1, AVC2, OSC1, and OSC2, which look like they simply go to the analog meter. The unit has two tubes which glow when powered up. I measured the outputs and they are at the nominal voltages. I did not load them at all as I have no idea of the current ratings.

The unit is mechanically in good condition. No major dings or scratches. It is dusty and has bits of chaff and dried grass on the terminal blocks, like it was stored in a barn (!?) or some such. I don't see any evidence that it was a 'mouse house' though. It has some pencil scribbles on the outside.

Anyway, what was this unit a part of?

Thanks for any information,

Scott

A price guide is a price guide. You can buy them at any book store. Try
Barnes & Noble, Borders, Super Crown, Books Gazillion, etc. For shortwave
radios I use the Fred Osterman book "Shortwave Receivers Past & Present"
as my price guide. For "tubes" I use Guide to Old Radios as
my price guide as well as a couple of other good books.

I never even implied that you should be happy with the situation. I just gave
a reason for the situation. Doesn't make me happy either. So I don't bid
unless I really want the item. And then I set a price I will pay. It it goes
over that I move on.

I live in a city of several million. About three hamfest a year around here.
And the prices make ebay look like a discount store! I long for the old days
when you could go to a hamfest and pay a decent price for equipment. I guess I
just live in the wrong part of the country.

> don't know if it was coincidence or not but it just didn't smell right
> to me.

No it wasn't a coincidence. Did you read the faq at ebay? (Most people don't). The only way to make ebay work for you is to bid with less than one minute or even better around 30 seconds left in the auction. Bid what you will pay at that time. All the 'ebay pros' will be doing the same. Never bid early like you did. You're just running the price up when you do, usually against yourself. The serious bidders have two windows open on their screen. One set with their Max. price ready to go on the "send" button. On the other they constantly hit reload to see how high the price is getting in the last two minutes or so. You were just willing to pay $2.50 more for the item than the other guy was.

Never bid in even amounts either. That's a beginners mistake. Last night I got a GE Model 200 for $15.01. In the last minute several of us bid with the price at $11.00 I was willing to pay $15 for the radio so bid $15.01 in case someone else was foolish enough to bid an even amount like $15.00. Someone did. I got the radio for $15.01. Even with the $8 shipping that is less than half of what I see this model advertised for on "Antique pages" and want adds here on the net.

Is $15.01 too much for this radio? I don't think so. It is in nice condition and works. I'm sure I will have to do a little restoring on it.

> I got the item which was in very good condition. I'm not whining about
> paying too much for an item, I'm just stating what happened so others
> will be wary of Ebay.

If you don't read the rules and still insist on playing the game against others that took the time to read the rules (FAQ) then yes you should be very wary of Ebay. You won't win. You will just be one of the reasons the prices get so high on some items.

Ok, I know I pissed some people off. If you don't trust Ebay then you should stay away from it. And if you're not going to take the time to read all the information there on how to bid properly please don't bid at all! You're driving the price up on items I might be bidding on. And I like getting good deals on Ebay when it happens.

> yukontrapper@yahoo.com

I received a Drake R4B from him just last week. I sent him a Zenith T-O
in trade about a month ago after he posted to this group. It took him a
long time to get around to sending it, but I did finally receive it. I
believe he is a tour guide in the wilds of Alaska (as per details on his
website), so he extremely hard to contact.

I don't know the details of your transaction, but based on my
experience, he's not a crook, he just takes a long time to ship things.

Good luck,

Mark Glusker, glusk@sgi.com

2624. HUNTER Company...info please

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-18 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19980917204104.15936.00000296@ng56.aol.com>
Source record: 98982

Recently E-Bay had a Hunter ham band transmitter F/S. It was listed as being by the Hunter Company of Cedar Rapids. Looking at the photo, it looked like a knockoff of the Collins A-Line....in fact closer than Eldico's copy of the S-Line.
The front panel and the knobs could have been designed by the same crew; the VFO dial was smaller (One band at a time), but similar in "feel".

I believe that Hunter made a matching receiver, and probably a power amp too.
Does anyone have any info?
Matt

OK...

I've been playing with eBay for two months now and have experienced much of what many of you are complaining about.

Here's my USD$.02 worth...

I've had my bids pushed up to near max and won the bid. Pissed me off. I checked the bidders history (that's available you know and you can e-mail them) and found... he or she is just another bidder wanting to pay the lowest amount possible, just like me. So they're "testing the waters" to see how low they can bid and become high bidder. I've done the same. That's part of the game.

I have yet to be "ripped off", but I am not so naive as to believe it won't happen some day. When it does, I'll be as pissed as anyone, but I have the foresight to know it may occur... just as an accident may happen that may end my life. Caveat Emptor??? You bought into life... so deal with it.

As far as prices are concerned, if I have more money to spend than you are willing to pay, I win! Is that a bad thing? No, I don't think so. It's a game life offers us all: only the strong survive. If you don't have the financial strength to pay the most... oh well. Next time someone outbids you early, e-mail them and plead your case about how you need that radio to complete your collection. Maybe they'll feel guilty and let the last minute bidder outbid you... that way they won't have to feel guilty they outbid you (sic).

I'd personally love to own a Catalan jewel, but I can't and don't want to compete for them. So I enjoy the woods and Bakelites I own and I believe I enjoy our hobby just as much as those who CAN afford the rarest of the bunch. Ya, I still search hard and hope nobody else saw that the red Bakelite Emerson that was really a "Little Miracle" Catalan that went for $2200+ (damn!!) But someone with knowledge and cash to spend the big bucks did notice. And so it goes... and so it goes. If I had the free cash to spend and wanted something bad enough, I'd bid the Hell out of it!!

So I'll continue to bid on eBay. And sell too. If I can't pay more than someone else, that's OK, because tomorrow another group of radios will appear which includes something interesting I may win. And I may not get ripped off and... and ... and...

I believe eBay has filled a niche on the Net. I've sold to buyers world wide and purchased many interesting radios for my collection.

I'm satisfied with this service and wish it success. I just hope somehow, someone can give them some competition! Too easy for the IRS to look in on our activities and start their reign of terror, claiming hobbyists are engaged in a business. Know what I mean?

Remove the "1" placed for spaming when responding.

2646. Re: HUNTER Company...info please

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-19 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <6tvd9roel1@camel18.mindspring.com>
Source record: 98740

Hunter was formed by several including ex Collins in the late 40's. The first TX was the Hunter Cyclemaster that looks very much like the Collins 310B TX (30W input CW exciter). These are rarer than the rare 310B.

Hunter built many prototypes in the 50's and 60's. One line they did bring to market was the Hunter Bandit amp. The KW amp started with 572B's and finished with 3-400/3-500/8163 tubes. Several thousand were sold. They also made a 1/2 KW amp that I understand was sold in Europe until very recently. Hunter has been out of business for many years (1980 or so).

The TX you mention was probably a prototype. Eldico got a contract to supply MARS stations around the world a TX/RX pair that many call Collins clones. Don Merten K2AAA of Eldico said this was not so. This was 1958 to 1961. Perhaps Hunter and one or more other firms had access to this design. Cosmos Industries made a few units but the design was becoming too old.

I would love to see the pic...does anyone know if its still up on ebay? Or does someone have it stored on their PC?

And yes there were in Collins town (Cedar Rapids) as was Turner (made the SM2 Collins mic).

Does anyone have an unwanted 12 volt DC module and power lead for the
FT901 transciever they are willing to sell - I want to go mobile !
I guess its the same module for the FT902.

Does anyone have a keyer module (for the same rig) for sale ?

Is there a spare FT902 out there ?

Ideally I'd buy an FT902 with a DC module and a keyer and sell my
FT901. If you have an FT902 for sale - please let me know.

73, an FT90* fan

"Space Charge" tubes are fun to mess with. Havent messed with any
of the 12 volt variety in a while, but one boatanchor that comes to mind
that uses the 24 volt variety is the R-392/URR, little brother to the big
R-390 (non-A) receiver. Nary a high volt in sight, just 24 volt tubes
such as the 26D6, etc. Works great too, just as well as its big brother.
Needs external power though, unlike its bigger sibling.

Got one sitting right next to me as I type, listening to Radio Havana Cuba
on 6.000 MC (Mhz weren't invented when this radio was designed!.)

Message-ID: <361e9414.3078804@news.i-2000.com>
Source record: 98846

I have two 575A rectifiers Sylvania, that came from a defunct AM
station I was helping clean out--they are obviously new, with the
original packing and the original boxes..they we're spares for the
stations Collins 20V2(long sold)...The only problem with these tubes
is that the glass envelope, and the metal bases have come apart. It
is obvious both visually, and with an ohmeter that the filaments are
intact, and that the base and envelope have to be glued, with whatever
kind of magic glue that's used for such things.
I GUARANTEE these tubes to be as represented, or I'll gladly refund
your purchase price...I'll even throw in an additional pair of 575A,
which we're obviously pulls from the 20V2..don't know anything about
there condition....$50.00 + shp Bob K2LGO
Pse remove the (ns) from my adr Thanks.....

HELLO,

I have for sale an SB102, HP23, and SB600 heathkit station. This has been my primary HF station for the last few years. The radio is all original, no extra holes, switches, etc. The only change is that the previous owner wired a small speech processor which mounts to the side of the LMO. 2 small screws and a couple solder joints and you could remove it and make the unit all original.

$250 shipped from 60067

thanks
Mark

Brad:
You've got yourself a nice piece of Navy communications history.
These type sets are my speciality.

First, take every article about "converting" this radio that
you have and BURN THEM. They are total horse flop.
No conversion of any kind is needed and any done
will degrade and devalue the radio.

I do not, as a matter of personal principle, help
anyone who intends to "convert" a piece of military
history beyond that which is 100% restorable.
If you wish to preserve the piece and operate it
as originally designed, or if it's already been
whacked-on, I'll be glad to assist all I can.

Need the following details:

1. Has it been "hammed," meaning hacked, chainsawed or butchered?

2. Is the dynamotor intact with it's mountings and connector?

3. Is the rear connector a 7-pin, female job with mica
insulation and a center pin?

4. Does the front panel below the tuning dial have controls
installed or is it just an aluminum handle?

5. If there are controls, do they look professional?
Unscrew the panel and pull-out the drawer.
Write back with the information written on the plug-in module.

6. Remove the bottom cover, being careful to preserve the
screws. Do any of the bathtub capacitors appear to
have been replaced?

7. Are there any holes drilled in the top or in the
plug-in coil set in the bottom?

This will get us started.

2680. How attractive is a Boatanchor?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-19 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19980919163550.23681.00001820@ng15.aol.com>
Source record: 98870

I think we all agree that Boatanchor radios are percieved as either "ugly", "not so ugly", "nice looking", a "real beauty", "a real beast", or some other such descriptive phrase. But since the recent scientific quantification of beauty perception, it is now possible to quantify attractiveness.

Although so far only used by psychologists and sociologists, the new Metric Unit, the "Helen", can be used on things other than movie stars and models, I believe.

In practical terms, the day-to-day operative unit is the "Milli-Helen", which is the amount of beauty needed to launch one ship. Helen of Troy, of course, launched a thousand, so she is the standard. I submit that Kim Basinger is in the 200 to 300 range, with nobody else rating as highly (in my book).
But where do the BAs fit?
The GPR-90 is a real beauty, expecially in subdued light. I give it a 90 (convenient number!), and the R-390 maybe a fifty.
The SX-88 gets a 60, but the SX-99 matches it, almost at 59.

Any other ideas?

2681. It's enough to make you cry.

Yes. And for every dumpster, there are a dozen divers it seems where anything of value, metallic, or what ever, ends up in some homeless dude's grocery cart for its last trip to the metal recovery station for the final act of brutality. Collectors should keep at least a list of their toys with some kind of value attached. But it never seems to happen.

2685. Any mobile boatanchors use those 12V B+ tubes used in old car radios?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-19 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEzJvD7.11x@netcom.com>
Source record: 98875

I've been playing around with those low voltage (12V on the plate) car radio tubes. 12AC6, 12AD6, 12BL6, and such). See http://www.geocities.com/CapeCanaveral/9178/radios/12ba7.html near the bottom of that page.

I used a few in an otherwise ordinary "AA5" (All American five) AM tube radio in the front end and IF. And got the 12VDC from the cathode of the audio output tube.

No real advantage, other than the fun of doing it...

Seems there would be some serious boatanchors that used these 12V plate tubes. Avoids needing a vibrator to make high voltage off the 12V battery. Any ever made?

Mike,

You should look at using some of the collapsible military antennas. They
are composed of many sections, usually about 24" and have a spring loaded
nylon or metal cable running through the shaft(s). You "throw" them out and
give them a little shake and they "pop" together and then screw onto a threaded
(innternally) insulator. Some are 12' and some the military standard 15'.

From my years of looking I can tell you you won't find a "telescoping"
antenna of the length you require. On the other hand you could just build a
"magnetic" antenna and just throw it on the ground at your qrp location and
have a far better signal with about 10% of the complexity and about 1/5th of
the size and/or weight.

Enter "Little Known CCD" in any good net search engine and get the data.
Another one is the "ZS6BKV" antenna, (Found the same way.) which I've
also used QRP in the field with fantastic results.
Still another is the "St. Louis Vertical" (kit) which takes down into
30"+/_ sections of fibreglass fishing-pole material.

If you have intrest in any of these and con't find the refs E-Mail me
and I'll look them up and E-Mail them back.

Good QRP'ing OM. 73's

Well, transistors came along too quickly. Most of the car radios using
these tubes had transistors in the output, and shortly thereafter were all
solid state. About 1960 I think. Transistor prices dropped like a rock,
and tubes became too expensive all of a sudden. The changeover to SSB had
the american ham manufacturers in such a turmoil that product introduction
cycles were long, and skipped the 12V anode tubes.
Good luck with your experimentation. See articles in old Radio-Electronics
of the period about "starved anode" circuits.

I note many erudite and logical comments from those commercial folks who reap a financial bonanza on the east bay.

Personally, since I am 50+ years into ham radio as a HOBBY, I would much rather wheel & deal with another "hobbiest", than mess with a professional.

Never say never, but I would NEVER list on, nor bid on, the east bay money machine. ...'Nuff said.

I purchased several items on ebay as a consequence of seeing it posted here as I missed it through my normal search methods on ebay. So I was glad the seller posted it here. I hope they continue to do so as it is a lot easier than to search everything ebay sellers have to offer. Just put ebay in the subject line and all should be happy. Regards - Mike

> > JIM.....WB5LXZ
> >
> WOW THATS A REAL DEAL.. GET ME MORE!
>
>

Sounds pretty fair to me. People dont realize the time and expense
required to "Restore" an old rig. Probably because of the confusion
around
the term "Restore". Some folks think this just means getting it to work.
I dont know about the HQ150 but I have done half a dozen or so 28's.
looking over my logs and reciepts lets see where the money goes:

Beater SX28..Complete.. rough....$75
Caps (about 50) $28 you'll have a few left over
Filter caps (2) $18
3 wire cord and restraint $6
Cab powder coat $65

Here we are with the POTENTIAL to have a pretty nice SX28 and gee,
we only have $192 bucks in it. According to my logs lets look at the
time
it takes to do it up:

Recape the RF sections 8hrs
Recap the whole rest of the rig 8hrs
Time to clean and assemble 8hrs
Trouble shoot and align 4hrs

OK 28 hours of labor, if your doing it yourself for yourself thats
not a big deal, but no small shop can survive charging 10 bucks an hour
for this kind of work and even if they did were now up to $472.00

Yes AMFONE@CONCENTRIC.NET the days of working SX28's for $125
have passed, they faded with the last squirt of electrolyte out of

those now 50 + year old caps. They passed with EPA regulation of paints. These old rigs really "hung on" but the last 15 or 20 years has not been kind to the breed. I'll be the first to admit that in this day and age its not impossible to spend $400 plus to be the proud owner of a $125 radio. Perhaps the "$125 SX28 perception" is holding up better than the SX28's themselves.

And a tip of the Miller Hat to you, Stefan. I think any person who can rescue anything of value from the evil land fill is a hero. It's a rare day to see a lone can or plastic bottle laying around anymore! One fellow once told me his best diving was around a university campus when asked about the concept of Dumpster Diving. Perhaps that was you? All of my good parts as a kid came out the trash cans of Benzinger's Radio and TV repair store in Eureka California. Without that resource, none of my creations as a kid would have been possible. Good Diving, Stefan.

I *like* to see ebay postings listed on this group! If the seller gives a complete http URL, it's very convenient to check out the item. Most I've looked at are very educational as the seller often gives an informative description and a picture of the item. As for prices, that's strictly a market issue, no different than any other transaction.

I don't mind o n e posting by the seller that he has something on EBAY as long as he stated FA or EBAY in the subject line and restrains from overly enthusiastic advertising. Just write "I put my Hallicrafters XY on EBAY".

I really don't like last hour postings (when the seller thinks that the bid is still too low) where an Hallicrafters S-38E is called "rare, only $235, L@@K or you miss the oportunity of a lifetime, etc".

DAVE AND LARRY. AS YOU can read , most are upset with ebay messages
on this group. Your doing yourself as a dealer more harm than good,
dealers must think of their next sale , thats all that matters. And if you
upset the buyer you will upset the sale and hence the profit margin. And
thats what its all about for the dealer who must advertise his
ebay sale/auction to get the best , highest profit!

Very little without going to a moderated forum. I guess a new class
of forum needs to exist that would allow for the canceling of 'SPAM'
at discretion of the system operators of every node in the chain.
Also filtering should be added to all news group clients (and
servers if the above was true). Moderated means all messages would
go to the Moderator and he would post the ones that fit the forums'
guidelines.

Sir,

Please find the "Caps Lock" key on your keyboard, and turn it "off"
(it's located on the left side of the keyboard, just above the "Shift" key).

Typing in all "caps" is like "shouting"...we're not deaf, and it's rude.

Thank you,

And I suppose the owner should submit his item to *you*
for your informed judgement of its value?

And I suppose you're a socialist, since you don't
care for people receiving the most they can for
their saleable assets-- that is, unless they
get your personal "OK" on the price they set?

Come come-- be reasonable. Auctions set prices
everywhere in the world for every marketed commodity.
It seems only old hams (of which I am one, thank you),
and people who are used to stealing rigs
from newbies and widows get upset about it.

People like you and I cannot stand here and demand
the seller meet our dictate about what is a "fair"
price. Our subjective opinions are less then worthless-
they cloud the issue and cause aggrievation.
Let the market decide, and the market is whatever
an agreeable buyer and seller say it is--- including Ebay.

"Adapt or Die"

Hi Gang,
New toy! Picked up an RAL-5 receiver at a local swapmeet this weekend. Neat RX...two stages of TRF, with a regenerative detector. Lots of fun to tune the SW bands with!

Unfortunatly a previous owner removed the ID plates (one on receiver and one on power supply). If anyone out there has a parts unit, I'd like to buy/swap your tags. Also, could use a copy of the manual (original or copy).

From the construction and the tubes used, I'd guess this beastie was built in the late '30's. Can anyone out there provide some insight, or better yet, point me to any articles?

Thanks!
Steve WA4DUT/6

> on this group. Your doing yourself as a dealer more harm than good,

With genuine respect, I disagree. I've received, so far, 11 positive emails
and no negative ones. I've counted a few complaints here, but they are from
the usual small gang of complainers and known net trollers.
I'd be willing to bet the split's about 60-40 pro-Ebay, or even better.
And it doesn't matter.
We are within our rights and within the charter of the newsgroup.
Both Larry and I do our best to be honest, forthright dealers who do
their best to treat people fairly.
Most people will consider that far quicker then how we advertise.
And it's good for our hobby that someone goes and finds this stuff
and does all the blasted hard work to present it to you.

We spend our sweat, money and precious time to find this stuff.
It isn't free, you know. And we have a right and an duty to our families
to be fairly compensated for our efforts. I often REDUCE the final price
of an item I've auctioned, so that I feel I've treated the person fairly,
and I resent anyone saying that I'm "gouging" someone for max profit.
It just isn't true.

Again-- bottom line--

If you don't like it... put me in a kill file and don't read it.

Of course, when that Whiz-Bang 9000 you've wanted for decades
crosses my door, you're not going to know. Well-- hey,
that's the price you pay, right?

Regards,
Dave Stinson AB5S

AMFONE@CONCENTRIC.NET wrote:

> LARRY YOU SEEM TO HAVE A PROBLEM WITH SOMEONE WHO THINKS OUTSIDE OF YOUR
>VIEW.
Close, I do tend to regard people who don't know me calling me a thief
a problem. I tend to get a little upset when they SCREAM it in a room
full of friends.

>LARRY YOU ARE WELL KNOWN SELLER (DEALER) OF OLDER GEAR,
Cool! I didn't know I was well known for anything yet.

>I UNDERSTAND
>WHY YOU WOULD BE UPSET about my statements about the crap about ebay on the
>newgroup, Ebay is where you can Troll the most for your over priced gear.
<sigh> Not getting the message is he folks.
I'm not defending e-bay as the best of anything, I'm trying to point
out that consenting adults can choose to use it, or not use it.
I *do* use it. Primarly for newer SS stuff that doesn't fit well with
boatanchor theme. Normally I sell radios via mailing lists.
And calling my sales overpriced, has me rolling in the floor laughing.
A sizeable percentage of the readers of r.r.a.b also subscribe to
mailing lists. Less than 4 hours ago I gave away for postage 25 lbs of
vintage manuals, documents, catalogs etc. on
boatanchors@theporch.,com.

>Hey just keep your adds off the newsgroupd telling us all TO HURRY
>OVER TO EBAY TO BID ON YOUR ONE OF A KIND NATIONAL RECEIVER..
Don't recall *ever* making such a post. Claiming I have without even
bothering to check tells me and everybody else in r.r.a.b that you
have not only called me a thief, now your calling me a liar.
Sir you don't know me well enough to do either.

>BY THE WAY
>YOUR NOT THE ONLY EXPERT ON OLD RADIOS, NATIONAL OR OTHERWISE.
Very true, but you screamed to the world that *everyone* who ever sold
at e-bay knew nothing about old radios. The issue is not: "Am I the
only expert." The issue is your SCREAMING claim that no one who uses
e-bay is. Please try to stay on topic, after all you picked it.

> AS FAR AS THE NO-CODE COMMENTS, YOU HAVE A PROBLEM WITH FREE SPEECH HERE
> AS WELL . IF YOUR NOT INTERESTED IN MY COMMENTS DON'T READ THEM.
<sigh> OK lets start again from the top.
1) Some people believe usenet bandwidth limits are a problem. I can't
think of a better example of wasting it.
2) You have called me both a liar and a thief in a public forum.
Surely a FREE SPEACH advocate like yourself understands why I choose

to use your own words to point out the failures in your logic.
3) r.r.a.b has a charter, it defines acceptable (on-topic) guildlines
for the newsgroup. (read it yet?) Your comments, made while claiming
the "rules" supported you are factully in error.
4) You sir are trolling. Or you are hopelessly uninformed, or both.

>I SUPPOSE
> IF I HAD MADE A COMMENT INDICATING HOW GREAT EBAY IS FOR THOSE WHO
> WANT TO JAKE THE PRICE OF THERE GEAR UP BY CREATING A BIDDING WAR
> YOU WOULD HAVE SENT A MESSAGE TELLING ME THAT YOU AGREE 100% AND THAT
> EBAY HAS BEEN THE BEST THING FOR YOU AND THE DEALERS TO MAKE THE BIG
> BUCK...
<sigh yet again> E-bay is not my favorite place for a lot of reasons
that go beyond this thread. That said, the point remains that the
issue we are discussing is your SCREAMING of mis-information, half
truths, and unfounded acrimonious accusations concerning myself and
others.
When they taught you about free speech in grade school, did they ever
go into the **responsabilities** that go with all those rights?

> LARRY YOUR WELCOME TO YOUR OPINION AND I TO MINE. FOR YOUR INFORMATION
> I HAVE RECEIVED MANY MANY SUPPORTIVE COMMENTS FROM THOSE WHO ARE SICK
> AND TIRED OF DEALERS JACKING THE PRICE OF OLD GEAR UP AFTER THEY SCARF
> IT DOWN AT LOCAL FESTS AND THEN ADVERTISING THE BIDDING WAR ON THEIR
> GEAR LIKE YOU DO .. ON A NEWSGROUP TELLING ALL THE SUCKERS TO COME AND
> "BID IN THE AUCTION ON THERE WODERFUL OLD GEAR "

Again you are factully in error. I don't advertise items I send to
e-bay here. I'm growing quite tired of correcting your non-facts.
Please try to gather some for the next round.

I use a filter on all the rec newsgroups that says anything with "ebay" in it will be rejected. I never see them - therefore, I don't get upset about them. Ebay is not all that gets filtered out either, I have a few other select items I have little or no use for - and they too are filtered out.

Just an idea for you.

I personally believe that ebay has done a very good job of getting
people to take stuff off of shelves, get it into the marketplace and
finally into the hands of another person so they can have the experience
of playing with it. If one was to just use the newsgroups for buying and
selling I believe a lot of people would not even bother to try and sell
that old Hallicrafters boatanchor that weigh a ton and was but on the
self back when one had the energy to get it on the self. So lets
continue to have FUN.

Yes, like your ten-cent adolescent snide remarks.
Since you can't seem to contribute to the thread
in any meaningful way, I suggest you take a refresher
course in civil discussion. You'll find them in your
local elementry school. Perhaps then you can
proceed beyond school-boy tongue-sticking-out
and cowardly verbal rock-throwing.

> no,but many are forced to deal with the mess it makes
Please define the "mess" with which you are "forced" to deal.
I wasn't aware that a "delete" key was such a huge trial,
although I understand that you might have trouble mastering it.

ahhhh... forgive me... I've let my temper show.
One of my many faults is a low tolerence for those who
deliberately chose to be ignorant.

I have to agree with Dan. I think Dan is being conservative when it comes to the time involved, or else he's a lot more efficient with his use of time than I am, ha ha. He also didn't include the cost for replacing any tubes.

Is $425 out of line for a restored SX-28? I suppose that depends on what one considers a restoration. To me, that means that the set looks and works as well as it did when new, and that it will be reliable as would be a new set. This can be parts and labor intensive, as obviously many hours would be required to change faulty capacitors, resistors, switches, etcetera, plus cleaning the chassis, painting or powder coating the cabinet and panels, restoring all lettering and other cosmetic items. If this is what WT5O does, than $425 is very reasonable.

On the other hand, I've seen some sets represented as being restored where the restoration consisted of nothing more than getting audio from the speaker, cleaning the knobs and giving the cabinet a scuff 'n blast Krylon job. Worth $425? Get real.

Unfortunately, such distinctions do not seem to exist in the collective mind of the price police.

C'mon boys, fight nice!

I don't have a problem with guys posting stuff that's for auction on Ebay if they title the message with "FA:" or some other nomenclature that lets me know up front that it's an auction item. The only time I get miffed is when I read a "FS" message and find out in the last line that it's an auction item. Maybe it's me, but I feel like the seller is trying to pull some sort of scam when this is done.

Certainly some stuff on Ebay is going for prices that are, IMHO, rediculous, but I guess caveat emptor applies. Personally, I don't feel the need to protect others from paying too much for something; it's none of my business how they spend their money.

To me, the griping and public attacks are more annoying than the Ebay ads. I know that such behavior has always been prevalent on the net, but it gets downright juvenile at times. I don't know why I follow such threads, it's kind of like rubbernecking at a traffic accident!

That's my $0.02 worth. I have a DX-100 on the workbench waiting for some attention!

73 and have fun!
Steve K8VO

As a former owner of a G76 & a G76 supply, AND, a Gonset Collector, I'd have to say that the whole package is not worth $250

Now, in the good old days we would adapt the plug from "any old" supply, matching the filament ladder, the bias and the plate voltage to the circuit.

Or even get radical, and BUILD a supply from scratch! (...honest)

Alas for the good old days, when men were men, and hams were hams.

Folks,

I am in need of the following issues of Ham Radio magazine. I have many (!) other issues to swap or I'll purchase it outright. I'd go for trading whatever you need for what I need, meaning multiple issues for the one I need. Let me know if you have them and what issues you are looking for.

Thanks...Rick...W5RH....

Wanted...1968--March, September; 1969--February, December; 1986--November; 1988--August; 1990--September (this is CQ with Ham Radio).

Thanks.....Rick...W5RH

To maintain the exact color as the VFO filter you could use some of the original blue filter material for the meter as well. Drake sells it on line at:
http://www.rldrake.com/tech/parts/partshtml/partslist.html

Do a search on the word "blue".

I rather prefer moderated newsgroups in general, but what is there about
this newsgroup that makes you want to moderate it?

I will make the general observation that a great many people don't
voluntarily pay much attention to the newsgroup charter, and that a
moderated newsgroup is one of the few ways I know of to raise the signal to
noise ratio...

I have the following Hallicrafters for sale - shipping and packing extra.

S108 General coverage reciver, nice condition, and running well. $125.00

S85 General coverage receiver from the 50s, relive you novice days with this one. Nice clean set. $90.00

SX25 1940s General coverage set. Playing, no mods to cabinet, needs a bit of a cleanup, and should be recapped. Has good dials and S meter. The crystal knob is not original, but is a Halli knob from another model, and looks almost the same. $90.00

S38D Short wave set, looks about a 7, good working chassis, original knobs and nice dial. $45.00

CB8 Citizens band portable hand held transceivers I have a pair of them in their boxes, with leather carrying cases and battery chargers. Both are running and are a 9 or better cosemetically, although the origianl boxes look a little the worse for wear. $ 90.00 for the pair.

Hello Robert,

The only ham gear I know of that used those tubes was the Gonset Super-12 converter. This was a unit meant for mobile use that was connected between the antenna and the car radio. Tune the car radio to 1430 or thereabouts, and tune in all of the HF hambands, as well as some SWBC, with the Super-12.

There were a few projects in the ham literature of the time. My '64 ARRL Handbook has a crystal controlled mobile converter that used a 12EK6 (I think) as an RF amplifier, and two 2N247 transistors as mixer and oscillator.

Am I reading this correctly? $250 for a power supply for a Gonset G-76?
Here I thought the President was telling us the U.S. economy was "stable",
and suddenly it appears we're in a period of approximately 500% inflation!

What are you asking for an SBE SB-36, and what condition are they in?
Most dealers don't ask for an offer of the "right numbers".
What warranty are you offering on them as a dealer?

Thanks,

Well, if you want to invoke "the rules", you're not supposed to be
posting For Sale ads here either. This is/was supposed to be a
discussion group for Boat Anchors. However, it has sort of evolved
into a discussion/swap group instead.

As I've mentioned in a few follow-ups in the past, if you're going
to post e-bay stuff here, use FA rather than FS in the subject line.
That's all it takes. And then everyone (except for the delete key
or clue impaired) can ignore them if they so choose.

Errrr, Actully this group was set up primarly for discussing
boatanchors, although sales ads *are* specifly allowd per the r.r.a.b.
charter.

> THEN WE HAVE EBAY WITH THE OVER PRICED JUNK AND STILL
> WE FIND DEALERS ADVERTISING ON THE NEWS GROUPS SELLING THEIR
> JUNK HERE AND TELLING US TO GO TO EBAY.. HEY FOLKS EBAY JUNK
<sigh> Auctions are just that, an *agreement* between buyer and seller
over the price of an item.

> IS WHERE YOU FIND DEALERS SELLING GEAR THEY NO NOTHING ABOUT OR VERY LITTLE
> IMHO... AND DUE TO THE NATURE OF EBAY ITS USUALLY OVER PRICED.. REALLY
I kinda resent that. I expect I know far more about the Nationals I
place up for sale from time to time than *you* sir will ever learn.
(I even know what a caps lock key is for...)

.
> PLEASE DEALERS STOP ADVERTISING HERE TO SELL YOU GEAR .. ITS AGAINST
> THE RULES OF THIS NEWGROUP...
<sigh again>
Do you know what a newsgroup charter is?
Ever read the one for r.r.a.b?

I found this little tidbit over on: rec.collecting from 3/28/98
>For Sale, Muffy Vanderbear retired, from the Holiday Collection. Muffy is
>dressed in a beautiful red, blue and green tafata dress with a blue bow with a
>red rose in her hair. Has tag is in mint condition. Listed in collectors
>book for $800.00 will sell for best offer.
Recall it? A best offer post looks to me like someone running a
auction, but too cheap to pay an auctioneer.
$800 for a Muffy whatever, and you think e-bay is a rip off? <LOL>

Lets see, we have 40 posts to rec.radio.cb: Mostly threatening the
wrath of the FCC on them.
39 to r.r.a.policy, mostly adding your two bits worth to the pro-code
side of the never ending flame wars.
I see you "outed" by posting his name, address, etc. someone you
didn't care for over in rec.radio.shortwave....
Well I'll save you the trouble:
My name is Lawrence Ware and I live in the Orlando area.
Among many other places, my contact information is in the FAQ for this
newsgroup. look under the section on suppliers.

You sir are a troller. :-(

General Electric "Test Oscillator", type TMV-97-A, s/n 675, mfg'd for GE by RCA. Battery powered & takes two 30's (not incl). Black wrinkle "lunchbox" with leather handle, large National variable vernier dial (fast & slow). Cosmetically 8.5 - not working. Missing original battery terminals (if it ever had any) and a couple other wires adrift under chassis, but no obvious parts missing. Very clean inside, since it's a closed unit. "A" & "B" batt leads tagged (4 1/2v & 22 1/2v). Range 90 - 25,000 KC, has Mod, single attenuation (HI/LO), binding posts output. Test equipment collector? Fix & use on your '20's sets or unique display as-is. B/O by email NOT Ebay, very light/easy to ship, or swap for working AVR-20 12v rcvr.

Larry, many of us *are* getting tired of seeing a NG full of Ebay pointers - this is not only departing from hobby trading/selling, but many of you forget that many of us have to D/L NG's to read them offline, and it is a tremendous waste of time, space & bandwidth to regularly have to delete half the posts. There is also the issue of post expiry on servers, most of which are already overtaxed by the growing monster that USENET has become. Love ya, guy, but please consider what really motivates these protests, however they get worded. Ebay aside, posting pointers in NG's instead of content is simply rude and boring.

> ...73...

Of course ONSALE actually sells the equipment, where eBAY doesn't. Plus ONSALE specializes in factory clear-outs and factory repaired equipment, where eBAY doesn't. But ONSALE frequently tries to kill you with the shipping. Recently, I purchased 10 identical items (cell phones) and ONSALE soaked me for 10 times $ 30 or $ 300.00 to ship these to Montana ! Note: They wanted $ 1200 (YES twelve hundred dollars) to ship these 10 cellular phones to Canada..... We opted for Montana shipping and it all came in one big box that cost them only about $ 25 to ship. Suddenly it wasn't such a good deal anymore! dutch - VE6WCA

A far more literate set of thoughts:
cgoin@ime.net recently wrote:
>Larry, many of us *are* getting tired of seeing a NG full of Ebay
>pointers - this is not only departing from hobby trading/selling,
Truth is, I'm not overly fond of them myself. Which is why you seldom
see one from me. Yet the charter was approved by a vote, and the
charter clearly notes that even commerical for sale posts (if related
to boatachors) are allowed. I think a Deja-news look up would find 5
or 6 from me this year, and I *am* a commerical dealer. Got a tax
license, accountant, lawyer and everything else :-)
(All of which cost money... :-(

>but
>many of you forget that many of us have to D/L NG's to read them offline,
>and it is a tremendous waste of time, space & bandwidth to regularly have

>USENET has become.
A valid point. Equally valid (if not more so) for those who use that
bandwidth to scream: E-BAY SUCKS! I would hope that you would agree
that the S/N ratio doesn't get much lower. With the possible exception
of the code/no-code debate.

>Love ya, guy, but please consider what really
>motivates these protests, however they get worded. Ebay aside, posting
>pointers in NG's instead of content is simply rude and boring.
I do, and I would support a change in the charter to reflect the
desire to ban auction posts as long as we vote to ban them all.
To me this includes any post with "best offer," "taking offers," or
"best offer by" in it. I could make a good case that this practice is
far less ethical than an e-bay auction. At e-bay once the auction ends
you get to see who bid what, and if the reserve is met, the buyer has
a contract agreed upon by listing/bidding the item.
A "best offer" post is an uncontrolled auction with only the sellers
rules and ethics, if any."Gee I didn't get offered as much as I
thought I should, so I'm going to tell *everybody* they were outbid
and then send it to e-bay, or the ham-trader, or just take my BA and
sulk."

Otherwise what we are discussing is akin to selling your house.
The agent puts you in the MLRS, for which they get money.
Yet many/most people don't think anything of also putting classified
ads in the paper, or hanging out those "Open House, For Sale" signs.

We could even try banning all FS, and FA posts completly. I expect
this would work about as well as trying to bail the Titannic with a
teacup, but that's another thread. :-)

Ethics are funny things, you have them or you don't.
Using or not using e-bay has little to do with it.
And saying everyone who sells via e-bay is selling junk and stupid,
even when useing ALL CAPS! is like saying: All blacks are dopers and
gang members. It's not true, and it is pretty likely to upset people.

The worst rip-off I ever got taken by started right here in r.r.a.b.
It might of been hard to enforce, but at least I would of had a
contract if I had bought via E-bay. I still ship radios all over the
world based on a promise to pay, because most collectors *are* honest.
.
I think we may just have to live with E-bay and its copycats in
r.r.a.b. No amount of public complaining, (EVEN IN *ALL CAPS!*)
is going to stop auctions. The thousands of tranactions a day say lots
of people like e-bay just fine.

I really suspect the primary issue here has more to do with the fact
that when something you want shows up at e-bay, your far less likely
to get it for cheap.

Normally I ignore trolls, but this time I *had* to start typing....
You would think I'd learn. <sigh>

This time I'm glad you posted your thoughts, and replied to my
comments. Perhaps this thread can continue to become a useful use of
bandwidth. :-)

Thoughtfully,
-Larry

Hey folks, please don't make fun of this idea, I think it is
brilliant. Of cause it is not serious in a whithe-shirt-ant-tie way,
but who cares?

* Siemens R311
To small knobs and too designer style, my god it is almost modern.
15 milli Helena

* Hallicrafters SX28 Super Skyrider
Wow I think I must give it 100, but I may be biased.

* Collins 51J(3,4)
Stunning, a real beauty 85 milli Helena

* Collins 51S1
Boring and uninteresting, even worse then R390A, maybe 35?

* Drake R4 something.
These people where far better making a good receiver than building a
nice looking one.
25 Milli Helena

* Hammerlung HQ160
The best looking Hammarlund by far, without the idiotic looking clock,
it is really beautiful 95 mH

* National NC 173T
It almost approaches Kim, Symmetrical and with the two lovely dials
I'll say 125 mH

Well I better stop now before I become the next rocket target. If they
can hit the right country that is.

Yours
Olav

I went to the town dump yesterday, the custodian is a friend of mine for years
now.

He told me he had SIX 1500 watt UPS's put aside for me. (Last Sunday.)
The dump contractor ran over them with his bulldozer and then covered them with
fill!!!

It's enough to make you cry...

(In the past I have picked up 4 of the same UPS's!)

I would advise you to take a look at the
eBay auction sites: Radio and Radio
Equipment listings.

Then, come back here and you'll have a
whole new appreciation for$125 SX-99's!

Pat.

2810. FS: RME 126 tunable converter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-20 00:00:00 UTC
From: acomarow@aol.com
Message-ID: <19980920081552.25277.00002047@ng94.aol.com>
Source record: 98842

Attention RME fans:

This box tunes 6, 2, and 1.25 meters--three separate converters plus PS in a b i g box with large semicircular dial. Appearance is a perfect match for RME 4350. Even has dual-speed tuning like the 4350 (and cute little panel lights to tell you which band you've selected). Vintage: late '50s. It's shown in an ad in the '59 Handbook, priced at $240.

Excellent cosmetically--front panel is a 9 to 9.5, really exceptional. The top has the kind of shallow scratches you'd expect from other gear sitting on it. Rest of the cabinet is about an 8. The top of the chassis is a 9 to 9.5, no rust and very clean.

The line cord has been cut back to a stub, so I haven't put the converter to the test. No manual.

Shipping would not be cheap. This is a weightly sucker, I'd guess about the size or not much smaller than the 4350 itself. I'm in the Washington, D.C., area, and pickup would definitely be preferable.

I'll let it go for $60 (plus shipping if necessary).

Great mount designed in 1950's manner and costed out later-no serious business would make such a hunk of metal. Would you believe a solid aluminum casting an inch thick and machined estensively. You need to look at the picture on Ebay if you a Collinsophile- I confess I am, but within limits.

Happy hunting,

Lum WA4BPY

God bless you, Bill, but this is the Wild West. The old days of not discussing certain subjects "on the air" are gone. I wish it could be you way, but I've gotten used to ads for "Hot Sex," etc. in the middle of use groups.

Us remnants of a kinder, gentler time will all soon be dead, so just grin and bear it- and let the barbarians rule the Earth. Maybe we could all get back on the air on a nice cozy repeater, or CW..

Thanks for the response, Bill. It's refreshing to have open discussion on a topic without negative responses or flames. You know, the majority of the folks who routinely monitor and participate in this group seem to be level headed, rational people.
We all enjoy the old boatanchors. I'd like to see more discussion of BA operating procedures, just plain "how to" ideas and reminiscenses of the old days of boatanchor use for newcomers to the BA hobby. I get a kick out of reading the posts of that nature which do show up here.

newsgroup.
Furthur you seem to think by your comments that you AND OTHER DEALERS ARE DOING ALL OF US A GREAT BIG FAVOR BY SELLING GEAR AND MAKING NICE PROFITS!!! Please don't attempt to try to indicate that all your doing is out OF the goodness of your heart and THAT THEIR IS NOTHING IN IT FOR YOU AND THE OTHER DEALERS!! ANYONE attending a radio show of any kind can easily find good quality radio gear . I enjoy attending ham swaps and other radio shows and go for more than just the gear, so its not an effort for me or most of us , as you would have us think!! However its getting much more difficult to locate the older gear do to DEALERS LIKE YOU WHO SEE PROFIT , NOT HOBBY AND FUN AS THE CENTRAL MOTIVE FOR ATTENDING AND BUYING OLDER GEAR!!! THEN TO TOP IF OFF YOU TELL US ALL THAT " YOUR JUST DOING US ALL A FAVOR " , PLEASE SPARE US.

NOW to ensure the highest profit , you auction gear on Ebay (I'm sure for our benfit, not yours , why put a price on something just let the market make me rich) and must tell us all about your listings on Ebay in the newsgroup and see nothing wrong with doing so , in fact you let us all know that if we don't like it we can cram it.

Lets be frank , shall we , Ebay is good for DEALERS LIKE YOU , ITS A GREAT WAY TO MAX THE PROFIT AND CHEAP EASY ADVERTISMENT FOR YOU TO SELL YOUR GEAR. ADVERTISING ON THE NEWGROUP JUST EXTENDS YOUR ABILITY TO REACH ALL OF US WHOM YOU ONLY WANT TO HELP BY SELLING THE GEAR TO US, USUALLY AT VERY INFLATED PRICES..

LIKE THE FARMER WHO ASKED THE FOX WITH FEATHERS ALL OVER HIS MOUTH " WHERE DID ALL THE CHICKENS GO " AND THE FOX REPLIED WITH HIS MOUTH STUFFED " EMMM I DON'T KNOW "!!!

DON'T DO US ANY FAVORS DAVE!!!!!!!!!

I think perhaps you misunderstood my point, Tim, in asking for opinions
and comments from those present here. I do not feel any "need" to have
a group "ruled by some form of higher power", as you say. Newsgroups
are not started in quite the manner you imply. They are started by a
shared concensus of opinion, then a vote by a majority of persons who
wish to start a new newsgroup. There are moderated and unmoderated
newsgroups, with clearly defined differences between the two.

It is not, nor has it ever been my intention to "mess with this newsgroup"
in any manner. I participate in this newsgroup, and have been for some
time now; I enjoy (and enjoy the privilege) of participating in it.
I also would enjoy participating in a moderated "boatanchor" newsgroup
on the 'net, were one to exist. This newsgroup is a fine group of very
knowledgeable persons, many of whom are willing to share their knowledge
and experiences freely with others. Most users adhere to the charter
and FAQ's of this newsgroup, and are courteous in their messages and
their sharing with others here. Those who refuse to show common courtesy
and civility are indeed in violation of the charter and FAQ's of the group,
and truly do not deserve the privilege of participating in a civil, useful
public forum. In a moderated newsgroup, such persons are not allowed to
post messages such as "flames"; in this newsgroup, being "unmoderated",
I suppose such abusive messaging must unfortunately be tolerated.

Thank you, Tim, for sharing your thoughts and opinions; they are truly
appreciated!

Here's a list of a few things folks on this group might have an interest

in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Dynaco FM-3 FM tuner. Excellent condition with VERY bright eye tube.

Works great! $100

2.) B+K model 747 Dyna-Jet tube tester. Mutual conductance type.
Excellent condition. $125

3.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges.
Good to 400 MHz. No slugs needed! $125

4.) Heathkit OP-1 professional oscilloscope. One of the best tube scopes

heath ever made. MINT condition. (Unit was assembled this year!) 6 MHz
bandwidth. 5" CRT $75

5.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable

current limiting. Volt and Amp meters. Good condition. $200

6.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm
outputs and level meter. $150

7.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to
3 V output (+20 dBM) into 50 ohms $150

8.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM
modulation. $150

9.) Racal/Dana 1994 universal counter. measures frequency, time,
period, etc. Up to 160 MHz. Dual channel. $125

10.) Hitachi VK-C350 color CCD video camera. Has S-Video and NTSC
outputs. Can be genlocked. Professional quality unit. With Zoom lens.
$100

11.) Box of used, tested tubes. No useless TV types. Mostly pulls from
test equipment and industrial gear. 6 and 12 volt types, lots of
Industrial/military types. Some audio types. Approximately 400 pieces
total. Prefer pick up. $150

That's it for now. Thanks Again!

Dan

Right on!

I own two SX-28s. The first cost me $150 plus shipping to New England
from California. The second cost me $250 plus another $100 for shipping
expenses (the guy insisted on having the radio crated!!!).
Both sets were in poor condition; but, after searching for an SX-28
for three years without much luck I am not complaining about the price!!!!

It took me over 20 hours just to clean the front panel on one of them!
I replace all the electolytics, papers and resistors in my boatanchors.

$425 for a properly restored SX-28 is a bargain. There is a guy in ARC
who has SX-28s for $400 and $500, and I am sure these are "as found"
units.

Regards

Pete, K1ZJH

Message-ID: <36070DC4.308@ix.netcom.com>
Source record: 98611

A for-sale group might be a workable solution, BK.
Good idea. But it must be even-handed.
No sales messages of any kind -no exceptions-
should be the rule here if any at all are to be banned.
That makes more sense then a moderated group,
which puts a tremendous burden on a few and gets
them accused of censorship as sure as sunrise.

Only down-side I see is forcing the group members to
wade through two groups, so they don't miss
offers that would interest them. Even before I sold
anything, I didn't have a problem with sale posts.
I look at this like a newspaper. I just don't read
the articles that don't interest me. It's no
trouble at all and I think most reasonable
people feel that way.

Secondly-- Is there really, truely a large-enough sub-group
of people that are unwilling to delete messages to
justify creating a new group, or are we simply
hearing a lot of steam from a small but vocal minority?
I don't know. In fairness, perhaps we should find out.

If a large portion (say 40%+)
of the group is truely unwilling to discard
unwanted messages, then I believe
we should actively consider forming a for-sale
newsgroup, even though it will cause some extra
trouble to most members. After all, the newsgroup
was formed to serve the members, not aggrievate them.

Just food for the discussion.

Kind Regards,
Dave Stinson AB5S
arc5@ix.netcom.com

2830. Re: Call for Support of a Moderated "Boatanchor" Newsgroup

Having read all of the above posts, it appears that the majority oppose
the "Moderated Plan."

However, I think it would be a good idea,
and I would join such a group.

E-bay, flames, cross-posts, get-rich, and
hot-sex ads spoil this page for me, though I find plenty of good stuff
here also.

No group is perfect....(I just returned from a three hour Church Council
meeting, which thoroughly illustrates that point!),
still, I sure wish we could try.

Well, Bill, I don't think we can or should split hairs about
for-sale posts. Auctions are clearly sales, as are the
many other forms here. If you're going to ban auctions,
then you're going to have to ban "best offer",
"best offer over $xx" and all the other little tricks
that are actually auctions. Then you're going to have
to define what is and what isn't a "sale," and that's going
to lead to all kinds of arguments. Better, if you're going
to ban sales, to ban them altogether and send all
sales to one place. Kinda like a "classifieds" section.
Only offers to give-away stuff for free (or shipping costs)
would be allowed here.

Don't get me wrong-- I don't, personally, support
the change... at least, not yet ;-), but heck
I'm flexable and I can discuss it without kicking sand,
as long as someone doesn't start calling me a crook
(no no! I won't go there again! heh heh!).

If it's truely what the users say best serves them,
then I could get behind it. Let's just kick it around
and try to find out what the "silent majority"
really think about spliting-off all the sales
to a new group.

Oh yes... couple other things we might want to check into.
Might have some trouble getting
"rec.radio.amateur.boatanchors.forsale"
through the voting process. The powers above
will probably counter with "you've already
got rec.radio.swap." That could be a problem.
God knows I'd hate to try and getting boatanchors
to market on the "Wrecked.Radio.Swamp!"
It's a REAL mess. Then there's the hassle of
trying to get most internet providers to offer it.
We can't even get Netcom to pick-up the BA photo group.
There is already "rec.radio.amateur.forsale" but very
few IPs carry it, so almost nobody uses it.
I can't get it here.
All this could cause a real mess.
Still-- no hill is too high if folks work at it.

hmm, with all the crap going on on ebay with
people posting, then either having thier friends
drive the price, or by logging on another internet
service and driving it up themselves.......
who in thier right mind would even look at ebay?

I will personally send a EBAY ALERT on any non ebay
informed posts. That is certainly within my right to save
some other poor sucker the time of having to read the
crap.

IF that makes me look foolish to help many other people
than so be it.
IF you don't like it that I warn them, so be it, you don't have
to read my posts either.

Hi. I'm looking for the schematic for a Hallicrafters SX-88 receiver. This receiver is located at the McMath-Hulbert Solar Observatory (non-profit) in Lake Angelus, MI. Volunteers maintain the equipment. The observatory is used for educational purposes today. FYI: None of the panel lights light up and most of the 6/12V tubes do not light up. May be a power supply problem?

Thanks a bunch.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=30469137
Hallicrafters S38C real nice (some paint chipping) a real winner

Most of these radios I get are in non-working order. I take time to
re-align/re-tube if necessary and almost always replace all the wax caps.Clean
switches and Pots. Lubricate/ clean bandspread/Main tuning plate. These don't
go up unless they are right. Check raters comments. Many of us through out the
country want to own the old radios but don't have a way to get them. Ebay is a
somewhat controlled area were most folks can feel assured. Too many times we
read on the NG of somebody screwing somebody.
None of these radio have a hum.
They are a pleasure to use. The following will be up in the very near future.
Hallicrafters S38E (Very good)
Hallicrafters R44 Speaker (Very good)
Lafayette HE-30 (Real Nice)
Lafayette HE-80 and original Manual (Real Nice)
DX-160 and Speaker (Real nice)
Hammarlund HQ110C (Clock and meter works)
I have low reserves for these items, however my time is worth my earnings.
Don't condemn Ebay unless you educate yourself on" what the definition of a
sale is" Enjoy.
Everybody has the right to complain about posting Ebay items here on
the NewsGroup. This is my choice and I think people who complain about it
are....no comment.

Source record: 98763

Realizing a "Call for Support of a Moderated Boatanchor Newsgroup"
will be embraced by some (and cursed by others), I personally feel
the time has come to ask for support for such a moderated forum.

Such a moderated newsgroup would allow only messages which conform
to the charter (to be established) of the newsgroup. All messages
which do not conform to the established charter will be disallowed,
"killed" by the moderator(s) of the newsgroup. I've observed this
concept working for several other newsgroups, and it seems to work
rather well. I am NOT suggesting in any way the elimination or
modification of this newsgroup. I am suggesting and calling for
your comments and suggestions regarding the creation of a new,
moderated "boatanchors" newsgroup, one which will facilitate the
discussion, exchange of information, swapping, buying and selling
of "boatanchors" through the newsgroup (only) by private individuals
(only) who share a common interest in same.

Please, let's discuss this using reason and common-sense.
And please, no "flames". Life's too short, and "flames"
only tend to make it that much shorter.

Thank you,

-bill

Another thing I found about Onsale is that retailers who use their auction service usually sell products themselves, and often it's a better deal. I've almost bid on computer products sold by Computer Geeks (compgeeks.com) via Onsale, only to check their own website and find the exact same thing selling for (or sometimes BELOW) the opening bid.

I like how the USPS stamps the shipping price on the box, just so you can see how badly you got ripped off.

> I rather prefer moderated newsgroups in general, but what is there
> about this newsgroup that makes you want to moderate it?

I don't especially want to personally moderate it; I would like to see a moderated "boatanchors" newsgroup without all the unrelated fodder and bickering, without the commercial dealers and deceptive "For Sale" ads that end up (only upon a thorough reading) to not be "For Sale" ads at all, but actually "For Auction" ads promoting items being auctioned off (to the highest bidder) someplace else. I'd like to see a newsgroup where boatanchor "fans" can discuss their boatanchors, their restoration efforts and methods, the care and operation of their boatanchors, rigs they are seeking and rigs they are seeking to add to their collections... ...without having to be concerned that they will be flamed by some flaming a*hole who's "trolling" for an argument, or seeking to play "price policeman". All of this could be achieved through a moderated newsgroup with a charter spelling out the "rules" of the newsgroup and a moderator or moderators monitoring and enforcing the charter.

I'd like to see a moderated boatanchor newsgroup that (hopefully) would further the interests of boatanchor collectors, restorers, individual traders, boatanchor nostalgia buffs and users, and all those who appreciate boatanchors...rather than those who exploit the hobby solely in the interest of making as many bucks as they can from collectors and other buyers. I'd like to see this hobby remain a fun hobby, rather than a price-driven commercial enterprise.

> I will make the general observation that a great many people don't
> voluntarily pay much attention to the newsgroup charter, and that a
> moderated newsgroup is one of the few ways I know of to raise the
> signal to noise ratio...

Agreed, Bob; one only needs to take a look at many of today's messages here to see examples of what would *not* be allowed in a moderated newsgroup. I'd like to see a better "signal to noise ratio", and moderation is probably the only way on the 'net to achieve that.

Thank you for your response and input!

Please present the names and accounts to back-up
your accusations-- If you can. I will be first
in line to see them exposed for being swindlers.
An honest forum is in everyone's interest.

> > >> I will personally send a EBAY ALERT on any non ebay
> >> informed posts.....
> >What exactly is a "non ebay informed post"???
> >I honestly don't understand.

> uh......DUH
> think about it
> if you don't show that it is a ebay posting on the header,
> it would be NON EBAY INFORMED POST
> was that a bit to hard to figure out????

Thank your for your rude, snide reply to
my civil and polite question.

That's not what your mangled sentance said.
It said a "non ebay informed post", which means the
post has not been informed about ebay. That would
be some trick since the post is not a
conscious entity in itself.

I am not responsible for your inablity to
communicate clearly with the written word.
Perhaps all that heavy breathing and high
blood pressure while huffing and hurrumphing
over imaginary wrongs is distorting your perceptions.
Or perhaps professional assistance
with your education is in order.

> well, if you cannot figure out how to tell people you have something
> for sale without a bait and switch, then someone else surely can help
> you.
Please post dates, times and items on which you can
prove that I pulled some sort of "bait and switch."
You cannot, for I have not. My listings are as
honest and forthright as I can make them.
It's just good business sense.

You, sir, are calling me, about whom you know
almost nothing, a liar, thief and swindler.
It isn't true and I resent it.
I might feel free to return the favor and make unfounded
accusations about your parentage and lack of
morals and decency, but I'll refrain from doing so.
You've made your level of education, morality
and common decency perfectly clear.

> have a REAL nice day
I usually do.

2851. Waddya mean, "JUNK" ? CIA radios?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-21 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19980921051707.07085.00002858@ng38.aol.com>
Source record: 98771

SPRINGFIELD, Va. (AP) - Stacks of clock radios, outdated copiers and manual typewriters reach high in their piles on the concrete floor, near an endless tangle of desks and chairs and electric and manual typewriters. This is the 1 million-square-foot warehouse where the U.S. General Services Administration stores and sells the detritus from nearly 40 federal agencies - a sort of Big Government flea market where shoppers pay for goods their tax dollars bought years earlier.

There are bargains tossed in amid the clunky rows of old office furniture and quaint machinery. In need of a high performance acid analyzer? An unused rooftop ventilator? How about a tank containing 30 minutes worth of compressed air complete with a mask and flow regulator?

``If I don't have it this week, I'll probably have it next week,'' said Bob Forsythe, director of personal property for the General Services Administration.

For just $20, a lucky browser could walk away with a steal: a combination-lock filing cabinet - labeled with the letter ``Q'' - from the Maritime Administration. Whatever secrets it once contained, however, are safe. The old cabinet's drawers have long since been emptied.

The items on sale generally lack distinction, but it's possible some had a brush with history.

Congress sends its castoff furniture to the warehouse, about 10 miles outside Washington, and the yard outside is littered with antennas, cables and old electric equipment from the CIA. The Smithsonian Institution recently snapped up an old roll-top desk that was warehoused by the U.S. Postal Service, Forsythe said.

If another agency or a state government doesn't want a discarded item, it can end up available to the public at auctions and twice-weekly fixed-price sales.

Carl Catanese stopped by looking for items to build a police station set for the filming of ``Random Hearts,'' starring Harrison Ford. In past years, the freelance set decorator has stocked movie scenes for ``Contact,'' ``GI Jane'' and ``Clear and Present Danger'' with furniture out of the GSA warehouse. Old chairs from the House of Representatives work splendidly for staged congressional hearings, he said.

Herman Hockett, 77, used to go to other sales in the area, including ones at NASA's surplus outlet, but he found the GSA warehouse was better stocked and its people were friendlier. He came to buy four stackable metal bookcase drawers at $5 each - perfect for holding his record collection. Over the years, Hockett has filled 71 drawers.

Tim and Lorrie Pace have been warehouse regulars for years. They own a company that supplies props for movies and parties, and recently bought some early 1960s-vintage office equipment from the GSA for an ``X Files'' party.

``It's hit or miss,'' Mrs. Pace said. ``You have to be open to whatever's

there.''

Dear All,

I'm selling a large portion of my military hand keys. There is also one military sounder on the list. Every key on this list is new in the original box and have never seen any use. Those that are still sealed in their original packaging (noted in the description) have never seen the light of day since they were packed at the factory.

For a couple of the J-38s, the original cardboard box holding the key has been crinkled on the end flaps. This is common and is the result of the key knob protruding through the end flap (box should have been a little bigger).

If the key you want is unavailable and you would be interested in a second choice, please let me know what you second choice would be. Also, please include your mailing address in the first e-mail so I can get a shipping estimate for you.

These keys are mint, new, unused in the original boxes.

Thanks for the read!

Derek

Manufacturer: Westclox (Canadian) Key Model: Key and Plug Assembly No. 9A Box Label: 25 Central Ordnance Depot Montreal, Quebec Oct. 62 Section/Part No.: 5805.21.106.5854 Nomenclature: KEY TELEGRAPH QTY: 1 Comments: This is a key in an enclosed case with webbed straps for attaching to the leg. There is a olive drab cloth cord that terminates in a PL-55 1/4 brass plug. Box has a note written in ink on the end flap "$5.00 Air Craft Leg Keyer" (trust me, I paid more than $5.00 for it. I think the guy I bought it from paid $5.00). Price: $50.00 plus shipping

Manufacturer: Telephonics Corporation
Key Model: CTE-26003A
Box Label: One
NAF 213265-1
Key, Transmitting - Assembly
Manufactured by
Telephonics Corporation, N.Y.
For
U.S. Navy [also stamped with familiar anchor]
Contract No. NXs-12741
Comments: Key is equipped with "standard" skirted knob. In box, there is also a small paper bag that has a spare "standard" skirted knob and also a taller knob (a.ka. stovepipe) with a skirt.
Price: $80.00 plus shipping

Manufacturer: unknown (no markings) - box is stamped TM 9745 Made in Japan
Key Model: J-38
Label: Telegraph
KEY J-38
File # 13945 - Phila - 43
Comments: This key has me stumped. When I first saw the box, I thought it a cheap, imitation Japanese key. However, if this is a Japanese copy, they went to an awful lot of trouble to make the box look very similar to a Signal Corp Surplus key. In addition, the key inside which appears to be the correct key is a J-37 style key mounted on a phenolic base that is stamped J-38. Base is about 1/2" shorter than a standard J-38. This key is not similar to either of the Japanese "J-38s" in TVC NO. 10, page 6. I can't imagine that the Japanese were making keys for the Signal Corp at any point...What am I missing here...This is a fairly high-quality key.
Price: $50.00 plus shipping

Manufacturer: J.H. Bunnell & Co.
Key Model: J-43
Label: ONE EACH KEY J-43
STOCK NO. 3Z 3443
ITEM NO. 4
ORDER NO. 13943 - PHILA - 43
OCT. 21. 1942
MFD. BY J.H. BUNNELL & CO.
NEW YORK, NEW YORK
Comments: (none)
Price: $80.00 plus shipping

Manufacturer: unknown (bag containing key still sealed)
Key Model: J-44
Label: 3Z 3444
1 ea
Key, J-44
19162-PH-52
C.P. AUG 54
Comments: Sealed bag in box stamped identically to label on box. Outside of box is also stamped X-273.
Price: $80.00 plus shipping

Manufacturer: unknown (no markings)
Key Model: J-47
Label: (none)
Comments: Key in plain small cardboard box.
Price: $80.00 plus shipping.

Manufacturer: American Radio Hardware Co.
Key Model: J-38
Label: Signal Corp U.S. Army
KEY J-38
Order No. 13947-Phila-43
Made By
American Radio Hardware Co., Inc.

New York City, New York
Comments: In addition to key, box contains a chromed wing nut with a matching brass screw and brass spacer attached. I do not know the function of these accessories.
Price: $80.00 plus shipping

Manufacturer: Radio Essentials, Inc.
Key Model: J-38
Label: Signal Corps U.S. Army
KEY J-38
File # 13945 - Phila - 43
Made By
RADIO ESSENTIALS, Inc.
476 Broadway New York, N.Y.
Comments: Key in plain small cardboard box.
Price: $80.00 plus shipping

Manufacturer: Signal Electric
Model: Sounder Type 113-S
Label: Signal
Telegraph Instrument
Type 113-S Instrument Sounder
Ohms 150
Manufactured in U.S.A. BY
SIGNAL ELECTRIC MFG. CO.
MENOMINEE, MICH.
Comments: Box was wrapped in a waterproof wrapping with a label that said:
3ND-GEN-122
METHOD II PACK
PACKED WITH
DEHYDRATING AGENT
DO NOT OPEN
UNTIL READY TO USE
DATE PACKED JUN 1954

Wrapping was stamped: N17-S-42453-1001
SOUNDER 1 EA. ESQ V
JUNE 1954 METHOD II-E
PRESERVED AT NSD BAYONNE N J
DO NOT OPEN EXCEPT FOR USE C-7-8-150
Price: $100.00 plus shipping

One other key is in a cardboard box wrapped in wax paper and sealed with wax. The label that I can see through the wax paper says:

1ea VPP
3Z3438 6/45
KEY J-38
PACKED WITH DEHYDRATING AGENT
DO NOT OPEN UNTIL
READY TO USE

Price: $80.00 plus shipping.

Thanks again.

I would suggest that you forget about
the schematic request. Post the SX-88
for sale at $1,850 (last known selling
price on eBay).

Take the money and buy a new communications receiver for half that
amount...then, put the rest of the cash
into your treasury.

Pat.

I don't like some of the posts here either but a "moderated" newsgroup
as described, I believe, could end up more of a cencorship selection
committee rather than the true newsgroup Utopia envisioned. Going by
the old addage of "who's watching the watcher"... who will be moderating
the moderator(s)? Unfortunately, most of us have experienced
overzealous, power-driven people in most aspects of our lives. To borrow
a phrase: "Power corrupts. Absolute power corrupts absolutely".
I guess all I'm really saying is that overenforcement could kill the
usefulness of this newsgroup just as much as having off-topic posts
can. I don't like trolling or bickering either but I wouldn't want to
see a "message police" group entering into the picture. Just my opinion
(probably get flamed for it). 73 to all.

The Eldico gear was built to spec (mainly for MARS stations...military amateur radio system on bases) by Eldico. The gear is closer to the Sommerkamp line (early Yaesu) than S-Line. 1600 units were ordered and Don Merten of Eldico packaged a few extra for possible sale to commercial or ham markets(200, 300, 400 maybe even he could not remember in 1991)..he became a SK in 1995. Collins did complain to the military that the gear was Collins like. In 1963 the Collins complaint died when Heath introduced the SB300 and SB400....

Many Eldico twins have very stiff tuning compared to Collins or Heath. Being from MARS stations many have bent in tops (from stacking). The Power supply seems to have problems with components over time, and its often hard to get the RX and TX to match exact transceive freqs.

They are excellent buys at 50% more than Heath and 40 to 50% less than Collins S1 line.

You bring up a valid point, Terry, which certainly should be considered.
A "newsgroup Utopia" is not envisioned, nor do I believe it attainable.
In the moderated newsgroups which I'm familiar with and participate in,
the moderators follow the newsgroup charter in their "enforcement" of
the terms of the charter. Posts which are not permitted by the charter
never make it to the newsgroup. I've also watched one newsgroup where
the participants objected to "censorship" by a moderator, then censured
and voted to replace that moderator. The newsgroups have to function
as a "democracy", with the will of the majority ruling. The alternative,
of course, is no moderation, with subsequent abuse of the newsgroup
charter by those who choose to ignore it's provisions. Both have the
potential for abuse, and I personally feel that both have certain
advantages and disadvantages. Whether both would be desireable for
"boatanchors" newsgroups is the question I raise. Would the possible
advantages of a moderated newsgroup outweigh the possible disadvantages?
Would a newsgroup with a higher "signal to noise ratio" offer advantages
users would want? If so, perhaps moderation of a newsgroup is not the
only "answer"...perhaps others could suggest alternatives which would
achieve "more signal" and "less noise".

I think these questions should be answered by those interested (or not
interested), with "majority opinion" being the deciding factor as to
whether or not this is pursued any further. So far, opinions seem to
be "split", about "50/50", but it's a bit early to tell at this time.

The only "power" a moderator has is to enforce the charter of the
moderated newsgroup. That "power" is derived from the users of the
newsgroup, and is subject to their granting or revocation of same.

For the record (since it has been asked several times of me in e-mail),
I personally have no interest in moderating a newsgroup, altho I do
feel a moderated newsgroup would offer some advantages which should
be considered. Further opinions and suggestions are requested, and
are welcomed from all.

Thank you for your input, suggestions, and opinions, Terry!

If you can't beat'em... buy 'em... that way, you make money on EVERY eBay boatanchor sold....it's the American way... so keep'on post'n coz Daddy needs a new jap rig...

This week's IPO newcomer is eBay, a pioneer in online person-to-person trading. The highly anticipated offering is expected to price between $14 and $16 share, raising $55.8 million. There is solid demand chasing the tiny 3.5 million shares being floated.
With Internet IPOs down 5 percent on average this year, the field of Web IPOs has proven to be a disappointment. This should work in eBay's favor as finicky investors, searching for the next Internet leader, may not be able to let this deal go.
Unlike many publicly traded Internet companies, eBay is profitable. Only 19 of the top 50 publicly traded Internet companies have profits at all.
The three-year-old service brings buyers and sellers together in an online auction, where individuals buy and sell items ranging from antiques, coins, and collectibles to computers.
Over one million people visit eBay's site each month, and 3,000 new users and 70,000 new items are added each day.
For the six months ended in June, eBay generated $14.9 million in sales and netted a $215,000 profit.
With a prospective market cap of about $600 million, eBay could sport a price/earnings multiple of over 2,700.

I've seen examples of moderated groups ending up in losing quite a few 'good' subscribers due to sensitivity over censorship. I think most of us are capable of reading/not reading posts which we may not agree with. The 'unselect button' works well at this station and I've really seen nothing on this particular easy-going group as a reason to appoint a helmsman. Thus my vote would be to continue up-anchor on our present course. :-)

I haven't seen all that much net-abuse here on r.r.a.b. There have been
a few flamefests that have burnt themselves out pretty quickly, but
the vast majority of posts stick to the charter.

Some folks might want to check out the various e-mail lists that
cater to boatanchorites. They are moderated in the sense that
anyone who violates the rules is booted from the list.

The grandaddy (and best in my opinion) is the original:
Boatanchors
(600 serious, dedicated, boatanchor-lovers)
Subscription is $12.00 per year after a brief trial period.
Send an email to: ListProc@thePorch.com
Leave the "Subject:" blank.
In the msg put: subscribe boatanchors <your full name & call>
You will get a confirmatory reply and a welcoming message.

You can find more listed on the r.r.a.b FAQ page I maintain at:
http://www.cs.unc.edu/~nick/rrab.faq.htm

FYI, here is some info from the FAQ:
==========
==========

What is the rec.radio.amateur.boatanchors newsgroup for?

The polite discussion of boatanchor related topics:
Restoration
Repair
Operation
Collecting
Parts sources
Historical info
Legends and Lore
Vintage operations,
Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap

==========

Who is welcome on the rec.radio.amateur.boatanchors newsgroup?

ANYONE interested in Boatanchors.
Hams, Non-hams, SWLs, military surplus fans, etc.
Newcomers, old-timers, thrill-seekers.
Women, Men, Boys, and Girls of all ages.
Commercial posters sticking to boatanchor topics

==========

What is rec.radio.amateur.boatanchors newsgroup NOT for ?

Pictures (attachments) - it is against netiquette, lots of people
can't read them, and it chokes many news readers
(post them on alt.binaries.pictures.radio, put them up on a web
page, or send via private e-mail)
Newer equipment (use rec.radio.amateur.equipment)
Vintage broadcast and phono gear (use rec.antiques.radio+phono)
Vintage audio gear (use rec.audio.tubes)
Vintage solid-state gear
(try the VSS list - Send e-mail to listserv@listserv.tempe.gov. Put
"subscribe VSS" in the message body)
Homebrewing with modern technology (use rec.radio.amateur.homebrew)
Non-boatanchor buy/sell/swap posts (use rec.radio.swap)
Antennas (use rec.radio.amateur.antennas)
General ham info (use rec.radio.amateur.misc)
Code vs No-Code (use rec.radio.amateur.policy)
Flames (use alt.flame)

I have a Johnson Viking 1 Transmitter. I'm not going to restore.
It is all in parts. Prices quoted on request. All transformers and
chokes are good. Modulation transformer was replaced with a much larger
unit. Case and front panel was garbage repainted. 73 Chris VE3NGW/W4

2869. FS Roller Inductors High quality

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-21 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <360694EC.15CD@ix.netcom.com>
Source record: 98789
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.homebrew

I have two roller inductors. Both Porcelin. One is a very large unit capable of handling very large power. The roller is 9.5" long and 3.5" wide, it has about 80 turns of wire. The contact rides on a glass rod. Very smooth turning, and in excellent condition. It will handle from broadcast band all the way up past 30MHz. This would be great for a large amp or a large antenna tuner. $185 shipped.
The second Roller is much smaller but equally the same quality. The roller measures 4" long by 2" wide with 24 turns of wire. This would be great for a smaller tuner or transmitter up to a KW+. $75. Both these roller inductors are in excellent shape. I just changed my mind on the project I was working on. 73 Chris VE3NGW/W4 Florida

If you feel the need to have a group ruled by some form of higher power, why not start one. If others feel as you do, then it will succeed and this one will dry up and go away. Why mess with this one? Everyone seems pretty happy with the current group.

As you guessed. It does not need recapping. Disc caps made during the late 50's are pretty stable. This RX was made from '58 to '62 so it's a fairly "new" receiver. Those oil filled black beasties died off in the early 50's, thank goodness.

The only problem you will have is that electrolytic cap attached to the 5U4. It's a multisection can that is rather hard to find. So when it does go... simply disconnect it and leave it alone. Instead, connect modern smaller electrolytics underneath the chassis. From the top, it looks like nothing has changed.

AAAh but it is pretty ugly... isn't it amazing something so ugly can work so well... I find this to be true with most boatanchors.

Enjoy! -WD0HCO-

Source record: 98448

Since this is off-topic, I'll keep it brief.
It's no secret that the FCC is unwilling to do much, if anything, in the way of enforcement in the amateur bands. I was able to get them to respond to a written complaint pertaining to a couple of the more renowned jammers on the 75m band, they contacted the individuals involved, via telephone, and asked them to stop, which they have not. However, if more people filed written complaints, perhaps they'd be more interested in taking more appropriate actions.
I have no political "pull", I'm just a typical ham who got tired of being jammed. What I did is wrote a letter of complaint, chronologically summarizing the events which transpired on the evening in question. My tone was polite and undemanding, and the letter was brief, under one page. Three weeks later I received a call from Dick Henderson at the Gettysburg office, who told me that he had contacted the individuals involved.
Since I was able to get a response with a single letter, I suspect that if others did likewise it may motivate the Officials to do something serious. If for no reason other than to get those writing off of their backs. All it costs is a few minutes time to write the letter and a 32 cent stamp, so it's certainly worth a shot.

To power up the radio short A to D and apply +28 volts to D. -28 goes to
pin E. Operates on 25 to 30 volts DC 3 Amps. 15 ft. whip is specified
ant. This is per TM 11-858. Hope this is the info you wanted.

Star was some equipment brought in from Japan in the 1960's. I think this was a piece of what was called the Star line. QST had a review (say about 1967 or so).

Several of the manual vendors have manual copies.

Sorry but the transceivers that starting coming out in 1969-71 finished off Star.

Message-ID: <6u9qku$n5u$1@camel18.mindspring.com>
Source record: 98462

I have a DKC-TRP Dow Key electronic switch. This unit is totally different than the earlier TRM or TRM-1 (I have schematic et al for the TRM).

Here are the differences 50EH5 rather than a 6EH5 or 12EH5. Looks like the TRP runs off 120V AC rather than 6.3 or 126 fil voltage.

The actual case is three times as big and has a cinch TV cheater cable connection at one end (the end away from the tube). Looking at this end there are two coax connectors on the left side and one on the right side. These connectors are back the case toward the tube.

Before I take it apart and figure it out does anyone have the layout, a schematic, or a hook up chart.

Dear All,
I have a dead National HRO-50T1 receiver that I would love to restore to factory or at least working condition. I have lost all of my contacts with people that have this radio in Washington state. I am trying to recompliment the rig with new RCA or GE tubes and have a complete set of both brands.
Would someone like to help? I am new to the hobby of restoring boat anchors, especially National's, and I have had the radio around more than 10 years without doing anything. I have 4 plug in coils with it. All I need is for someone to walk me through it step by step. Dunno much about electronics, repair, etc. Not new to hobby though. If I can't find someone willing enough, I'll look towards professional restoration.
Does someone have the service manual? I've got the instruction manual.

I have a Hallicrafters SX-28 Super Skyrider that quit working last week. It makes a loud thumping noise along with the normal receive audio. Probably lost a filter cap or something.

Also, a Johnson Viking Ranger II. It also has power supply problems but of a more serious nature. You know, the smell of a *very* hot transformer followed shortly thereafter by the ceremonial blowing of the fuse.

Anyway, I have NO time to fix or ship 'em but I can't take 'em to the dump either. They're yours for free BUT you have to pick 'em up. I'm in the greater Seattle metropolitan area. Hey, the price is right and I will help ya load 'em in your vehicle...

If ya want 'em, come and get 'em. Email (figure out the address below) for details.

2897. Re: Call for Support of a Moderated "Boatanchor" Newsgroup

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-22 00:00:00 UTC
From: Todd Bigelow <tbigelow@pop.state.vt.us>
Message-ID: <36074D21.250F@pop.state.vt.us>
Source record: 98468

Hi Bill and crew -

I'll weigh in now with my opinion on this matter, having been away from the group for a few days.

I agree totally with this suggestion. It doesn't require a 'new' group or charter, it only involves policing this one as necessary. Some would call that uneeded, but would they feel the same if it were their neighborhood and no one was policing it?

You don't have to be a 'heavy' or assume that anyone acting as a moderator would be - that seems to be making an excuse where there isn't yet a problem. 'But this happened somewhere else'? No doubt. But it hasn't happened a lot of other places too, so it isn't fair too assume it will here. It is reasonable to expect the freedom to express your views and to use this newsgroup - it is unreasonable to think that this includes being dishonest, deceptive(good example 'FS'.....[ebay] instead of 'FA'), or off topic(XXX pics, etc.). I liken it to being able to walk in a crosswalk without worrying that the driver feels he can run over you if he'd like and no one will do anything about it. Sure, he still could - but would he if he knew someone was watching him and he'd be held accountable? ;)

Doesn't at all seem unreasonable to me, Bill - afterall, we live by these same rules in life everyday (most of us). I can't help wondering if some of those worried about moderation might be more concerned that they won't be able to bend(break)the rules in their favor for fear of getting tossed.

As you've pointed out, the vast majority here follow the few rules and common courtesies of such things as honest postings and sticking to boatanchors and related topics. For those who don't, this would no doubt be a major set back - but then, they're not the ones we want here anyhow. ;)

Seems like the real question is 'who is willing to participate in a group where you're not only expected to follow a few simple rules, but required to?'.

Nice to see a real discussion for a change instead of just FS, FA, or 'Wanted' ads - not that they don't have a place here too. ;)

I agree totally Dave -

You know I'm not a fan of Ebay, but i don't begrudge anyone who owns an item the right to sell it as they see fit, provided it's honestly. Putting 'FA' in the title insted of FS tells it all, and yes - anyone who doesn't like it can just pass it up.

The fact that I or anyone else doesn't like Ebay doesn't mean you(or anyone else) can't or shouldn't. This is where people need to understand the part about 'choice'. ;)

Good luck Dave and thanks for being decent enough to put 'FA' in your title instead of 'FS'(unlike some folks) Unfortunately simply putting [ebay] at the end doesn't show up on many titles, So I once again urge folks to use 'FA' and *not* 'FS' - honesty is always best. ;)

Source record: 98470

I agree with you here too, Heinz - except for one detail. I believe that putting 'Ebay' in the title is basically advertising for them, something that is clearly forbidden in the charter.

My feeling is that 'FA' is the way to go - right up front, first two letters in the ad should be 'FA', as Dave mentioned. *Then* you could have a link in the message that takes the viewer right to this item if he or she is interested. I wouldn't think that could be construed as advertising since it is a link with a name in it(ebay in this case), not a title which looks like an ad for Ebay.

I've emailed many users here, nicely asking them about this. Most weren't aware and realized that it could be misleading to put 'FS' if the item was actually 'FA'. Some, however, insisted on making excuses like 'other people do it', or 'I put ebay in the ad somewhere'(last word, often doesn't show up) or 'Nobody cares anyhow'. I think we will always have a few like that - this is where some sort of moderation/enforement would be nice. ;)

Seems so simple to me - be honest and upfront with your fellow hams. Don't try to deceive them by putting 'FS' on an ad that is really 'FA'. If you do, expect to hear from many unhappy people who opened a msg only to find it wasn't really for sale. Hopefully we can one day add to this 'or lose access to the group if you can't follow some basic guidelines of honesty and politeness'.

People should be able to use whatever avenue they choose for disposing of personal property, so long as it is represented honestly. No one requires us to take part, bid, buy, etc. And if no one bought on Ebay, eventually no one would sell there. Same with high prices, if no one paid them they would drop.

So, who is really to blame here? ;)

And having a discussion is great - just wish it could be about old rigs instead of money/selling.

73, Boomer ;)

BTW, I couldn't agree more on the last hour ads - right down there with the slimey* lawyers, used car and insurance salesmen and other conmen.

* slimey denoting only the dishonest in these or any other preofessions ;)

Hi Ed -

I think I've seen these plugs at virtually every hamfest I've ever attended - usually on old cables found in piles or boxes.

You don't really need to spend $8 to get one, just be resourceful. ;)

I don't really think anyone was looking for a different group(many of us most likely already know most or all of them), it is more an attempt to see the basic(and few)rules/guidelines of this group followed.

There are always a few who will try to get away with as much as they can, so many of us would just like to see this group moderated only to the point of keeping out the trash/unrelated postings and dishonest users - make sense?

I know, some would rather it be left so that they can 'do whatever they feel like, whenever they feel like', with no considerations for anyone but themselves and their business dealings.

Didn't you and I have a 'FS'/'FA' discussion recently?

>TROLLS; Here's your chance to tell me where to go...<

No, Bob, moderation is an excellent idea and works very well. It is the only thing that held the best BA mailing list (not USENET) together. It may be problematic for a few reasons:
- Many servers do not carry moderated NG's - they are already maxed out as there are now over 100,000 USENET NG's, and a large majority of their subscribers demand to have space-hogging groups like alt.binaries.whackoff;
- Someone has to have the large amounts of time, dedication AND guts to rigorously enforce the rules, preview, acknowledge & forward every single post, post the FAQ's & Rules of Moderation, and to largely stay out of the NG themselves for their role to work. This person must also be held to absolute standards of not going after ANY deals or gear offered for sale until everyone on the NG has had a crack at it - usually meaning several days later. This person is going to be difficult to find - more of a very hard-working *observer* than participant, with no pay or tangible rewards.

I'd vote for it, Bill. Suggest emulate what Jack did with the BA list as a rule model - it has stood the test of time admirably with very little alteration, and absolutely no shit from anyone tolerated (i.e., not a democracy). Nothing off-topic or of "related topics" covered elsewhere. Bear in mind that the process (CFV to kickoff) for starting yet another USENET group is lenghty and time-consuming - this one took about a year to get in place.

>Better, if you're going
to ban sales, to ban them altogether and send all
sales to one place. Kinda like a "classifieds" section.
Only offers to give-away stuff for free (or shipping costs)
would be allowed here.<

This is silly - with moderation, making firm rules for what selling is/isn't allowed is simple. For example, to keep helping the hobbyists and eliminate commercialism, there might be a limit of two F/S posts per submitter per month - or whatever - so that when someone noticeably got to five in the same period, their F/S posts could get bounced. Moderation might also decide to reject F/S posts from folks who contribute nothing discussion-wise. There could be a complete ban on auction pointer posts without taking away from any of this. And so forth - there are numberless ways in which a NG can be moderated, not with that kind of "all-or-nothing" approach, with the added "necessity" for a "Classifieds" NG for BA's. And rec.radio.swap, however large it has become, IS available nearly everywhere (unlike the others cited) and IS a very active trading place where many of us have bought/sold BA's very well as *hobbyists with each other*. The reason many cannot get the BA picture NG is that there are already for too many binary NG's for ISP's to deal with - they take a lot of space - and folks are not asking their ISP's to carry it. Besides, since the life-to-expiry is now so short for these NG's, it is a lot smarter for a dealer to put photos on his own web page. Remember, USENET was never conceived as commercial activity or support for same, though there are some specialized NG's now for this purpose. No one on USENET would be rightly concerned about how you "get your BA's to market".

As a refugee from the original Boatanchor list, I vote for a continuation of this group's unmoderated status. If you are looking for a drill sergeant you can pay your 20 bucks to the "owner" of the "for-a-fee" operation and - believe me - you will get all the internet discipline that you want. But you will also have to agonize over every post, wondering if it will somehow offend one of the censors. On the "for-a-fee" list they will actually put you in "penalty box" if you post something they don't like!

I had a drill sergeant once. But I was 18 and I didn't really like it. I vote for freedom and flexibility.

Here's what I do: I DON'T READ the messages that don't interest me. Works fine. My keyboard has a delete key!

> Just MHO, of course.

The more I think about this, Dave, and the more comments I receive via e-mail from others about "change" within this newsgroup, the more I feel this may accomplish exactly what many seem to be seeking and supporting. Many have said that they wish this newsgroup would offer more "discussion" of boatanchors...more "how to's", more info regarding b.a. history, collecting, restoration, operation...etc. Many have mentioned "I'm tired of seeing so many ads in the group".

Why not ban ALL ads from this newsgroup? Given the difficulty of creating a (yet another!) newsgroup, why not suggest that ALL ads be placed in "rec.radio.swap", which already exists for this purpose? As has been pointed out by several guys, "rec.radio.swap" already has many boatanchor ads; many of us have both bought and sold b.a.'s through that newsgroup. In fact, so often the for sale/for swap/ wanted to buy/for auction ads are "cross-posted", this may be a way to "centralize" ads more efficiently. It certainly wouldn't be difficult to post and identify boatanchor ads as "B.A.F.S.", or some such identification in the subject line, to advise others the item or items for sale are "boatanchors". Just as it isn't difficult to post "For Auction" ads as "F.A.", so as not to mislead anyone.

As always, comments are most welcomed and encouraged. Let's hear from the "silent majority" here, too! Working together, there's no reason we can't accomplish that which we collectively seek...improvement of an already very fine newsgroup.

Thanks again, everyone, for offering your comments, suggestions, and ideas!

Bill Meara <wmeara@erols.com> wrote:

> I had a drill sergeant once. But I was 18 and I didn't really like
> it. I vote for freedom and flexibility.

Thank you for sharing your thoughts and opinions, Bill!
I share with you your vote for "freedom and flexibility", qualified
by adding "within the established rules of civility, the charter,
and the FAQ's of this newsgroup".

"Freedom and flexibility" does not convey to anyone the "right"
to "flame", the "right" to personally attack or insult others,
nor the "right" to deliberately deceive, nor the "right" to spam.

None of us wants a "drill sergeant" here telling us what we can
and can't do. And I don't believe any of us need such a sergeant.
We know the "rules", and most of us adhere to them as best we can.
Those who may not know the "rules" here should be advised, those
who break the rules need to be reminded of them, and those who
insist upon still breaking the rules after being reminded need
to go elsewhere! For without rules that are somehow "enforced",
without any "discipline" whatsoever existing, what do we have?

What I suggest we seek here is improvement of an already very fine
newsgroup. It's also what the majority of messages I've received
about "change" in this newsgroup seem to support, in one way or
another.

Again, thank you for sharing your opinions with everyone!

Once again being literate and thoughtful,
cgoin@ime.net commented recently:

>Dave, are you just having a bad day? This is out of character for you.
Perhaps both Dave and I are, yet it is hard to continue to turn the

opinions of dubious merit about you anytime they have nothing better
to do.

>Dave, those of us raising these concerns are not trolls or dealer-haters.
> I've bought from Larry B4, and we've all tossed things back/forth on a
>better list elsewhere in past years.
Indeed, you sir are far from either.

>Stripping way the heat from the
>light here,
<snip>

> I'm not speaking against doing so, but business
>is not the collective mindset here on the NG, even though it is
>occasionally helpful when our own scrounging falls short.
OK, I certainly understand and can even support this view. :-)
Dave might disagree, so I can't/won't speak for anyone but myself.

>Certainly, the Ebay pointer posts are not disallowed by the charter - a
>correct point - but it is the spirit here that counts & is at the heart
>of the matter.
Indeed, you are again correct. Perhaps it is time to review & revise
the charter? E-bay and its many copycats had not really exploded onto
the usenet groups when the charter was drafted. I followed the threads

back then and I don't recall web based auction houses ever being
mentioned, pro or con. The charter for r.r.a.b, like most newsgroup
charters was drafted then revised several times during a sprited
public debate period. Like most charters, it tried to limit discussion
to "on-topic" posts. The concenus when it was done was that BA
related commerical posts were acceptable. Because they served a valid
need. The spirit of the charter, (at least IMO) came from Jack Hill's
Boatanchor mailing list. I may not being doing as well as I should,
but I do try to follow both the letter and spirit in both.

> Not everything that is allowed in life is always wise or
>kind. The obvious fact that this NG is becoming half Ebay auction
>pointers surely violates the intent/spirit of what we come here for, and
>is a growing annoyance for many.
OK, I can accept that. I could point out that I find commerical posts

from tube sellers far more frequent and far more of an annoyance.
But I'm getting off topic....

> I do not think it takes rocket science
>or a degree in human relations to realize that asserting your right,
>however valid, to offend others is rude behavior.
Deliberately annoying others is always rude behavior. I've done some
of that already in this thread, and for that I apologise.
In my defense I will point out that anyone who reads this thread start
to finish will understand why.

>- would you find these pointers all over Jack's list?
Hell No! But do recall part of the reason r.r.a.b. exists is because a
number of people didn't like Jacks rules. Jack runs a tight ship, and
requires people to act like adults. That includes not making blanket
statements without any facts. (Something usenet is infamous for....
I don't think Deja-news goes back that far, but interested parties
might find a set of threads known as the "Howling through the Wires,
World Tour 1984" in an archive someplace.)
Jack also holds dealers under a very tight set of rules concerning
commerical offerings. Another reason the charter addresses commerical
posts, and allows them.

>What about the limited server space we all have to deal with? What is
>the matter with rec.radio.swap, and other places where one expects gear
>to be advertised, as distinguished from discussion & mutual edification?
r.r.s has grown so large, I don't think anyone has time to read the
whole thing. This was addressed during the charter discussions, and my
memory is that "For Sale" posts were invited here just so people did
not have to wade through r.r.s.

> For that matter, what degree of said discusson & edification have you
>been contibuting lately, which is the meat & potatoes of enjoying this
>hobby?
<Ouch!> OK you have me. Guilty as charged your honor. I often write
about Nationals and restoring them on boatanchors and the National
mailing lists, perhaps I should echo those posts here also?
I haven't done so before because honestly, I didn't think that many
people here in r.r.a.b. would find them interesting.

>Many of us got into BA's awhile back when the rest of the radio hobby
>became a greedfest, so that we could still have some fun. No one expects
>to do this for free, but neither do we expect continual sales & auction
>bombardment in the middle of a discussion forum.
OK, accepted.

> It also is rather
>implicit, nomatter what face one puts on it, that the intent of selling
>via Ebay is to obtain the highest selling price - this is not in the same
>category as trading with your hobby friends and simply trying not to lose
>money.
Accepted again, with the caveat that "best offer" posts have the exact

same goal.

>Understand that it is entirely normal for annoyed people to express
>themselves in unpleasant terms, and try to see the message being sent.
OK now we have to disagree: I can't/won't buy into "normal."
It is however rude and crude. and it does reflect on the posters set
of values and ethics, or lack of same.

>This place is starting to look like a fucking auction storefront, Dave,
>and helpful, friendly trades are falling off in this environment. This
>is important to those of us who are hobbyists, not businessmen here.
Yes, it is. Almost every newsgroup suffers from the same problem, and
each is trying to deal with it in some way or another.
And friendly trades have allready disappeared here.
<sigh>

Carl,

The most interesting posts I see on ebay are the ones where a peice of
radio gear is being offered with what appears to be a high reserve with
the comment "looks to be in good shape, but I never plugged it in". I
wonder what that really means :)

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors

"Popular Communications", October edition, page 34:

The New England Wireless & Steam Museum in East Greenwich, Rhode Island, was recently taken over by film crews from WGBH television for a PBS documentary about the role of wireless in the rescue of over 1500 people from the sinking of the Cunard steamer Republic in January 1909. The ship collided with the steamer Florida in dense fog. Mock-ups of the Republic's wireless cabin before and after the collision were created for the documentary. And simulations of the 'Sconset, Nantucket station and others using authentic working Marconi equipment were filmed. It's expected that the documentary will be aired in January, 1999.

An original working spark gap transmitter was moved to the New England Wireless & Steam Museum from Point Judith, Rhode Island. The museum hosts a "Yankee Tune-Up" get-together every spring for radio amateurs and historians along with a traditional "Yankee Steam-Up" every fall that features flywheel steam engines from the 1800s. Museum founder and president, Robert W. Merriam, received the 1998 Antoinette F. Downing Volunteer Service Award from the Rhode Island Historical Preservation Commission for his life-long dedication to the preservation of wireless and steam for future generations. Visit the Museum's Website at http://users.ids.net/~newsm to learn more about the museum and coming events.

The photo-copied manual for my SB-102 is missing Figure 1-2 (fold out from p. 107), which shows the position of the Driver/Preselector knob when aligning the receiver on each of the bands.

Could someone either describe the figure to me (ie, which mark corresponds to which band) or do a flatbed scan of the figure? It would be much appreciated.

From: doragsda@polymail.calpoly.edu
Message-ID: <6u8d71$2i4$1@cscnews.csc.calpoly.edu>
Source record: 98566

I just got a HQ-160 - not the prettiest thing in the world, but seems to work pretty well. I assumed I would be recapping it in the near future; opened it up expecting to find lots of black beauties, but it had lots and lots of disc ceramics and several caps that look like fairly modern plastic-dipped jobs. If it's been recapped, someone did a very good job - did the -160 have black beauties or other paper caps, or does what I see sound original. Given it is working fine, I'm thinking I'll just stick it on the desk and listen to it, not bothering to recap. Any help is appreciated. Thanks.

Hi Larry...you two seem to have "hit the nail on the head" as far as I,
and many others who have responded via the newsgroup and e-mail,
are concerned.

Perhaps a charter revision for this newsgroup is in order. (?)

> > Not everything that is allowed in life is always wise or kind.

...but "on topic" in another thread going on here at the present time! <g>
And certainly worthy of further discussion, or at least "kicking around"
with the idea of improving an already very fine newsgroup.

> > I do not think it takes rocket science or a degree in human relations
> > to realize that asserting your right, however valid, to offend others
> > is rude behavior.

> Deliberately annoying others is always rude behavior.

It's rude behavior, it's uncalled for, and it's not in accordance
with the intent or spirit of the newsgroup (nor the FAQ's, which
clearly state this to be a forum for "polite discussion".

Common sense is all it takes, really. For those few individuals
who have not shown such "common sense", feeling some need to "flame",
insult, and otherwise irritate others with off-topic (and often personal)
matters which would best be served by either "keeping it to yourself", or
taking it to e-mail, perhaps some means of "courteous suggestion" would
be appropriate. Perhaps a revision and further clarification of the
present charter would accomplish this in a manner that would not impact
upon the majority, who certainly show common sense and decency here.

>- would you find these pointers all over Jack's list?

> posts, and allows them.

Life itself "operates" under a set of "rules". There are those who
suggest "no rules"...to which I suggest that chaos and anarchy are
not what this newsgroup wants or needs. Nor do we need a "tight-
fisted dictator"; we need a sense of "balance", with rules that
we can live with, rules we can (and most do!) follow, rules which
will make this place a better place for all "boatanchor fans".

> >What about the limited server space we all have to deal with? What is

> not have to wade through r.r.s.

Only speaking for myself, I feel that one specific newsgroup, with
the purpose of advertising both boatanchors and other ham gear and
related equipment, poses no real problems. Perhaps messages there
could be clearly "identified" in their "subject lines", so as to
readily identify those messages an individual is interested in.

> > Many of us got into BA's awhile back when the rest of the radio hobby
> > became a greedfest, so that we could still have some fun.
> > No one expects to do this for free, but neither do we expect continual
> > sales & auction bombardment in the middle of a discussion forum.

Precisely why I believe a change in the charter of this newsgroup,
along with either the creation of a new "boatanchors.for.sale" or
similar newsgroup may be warranted...or, perhaps simply clearly
identifying all messages in "rec.radio.swap" would serve the purpose,
allowing this newsgroup to return to a true discussion forum (as it

was intended to be).

> > This place is starting to look like a fucking auction storefront, Dave,
> > and helpful, friendly trades are falling off in this environment. This
> > is important to those of us who are hobbyists, not businessmen here.

> Yes, it is. Almost every newsgroup suffers from the same problem, and
> each is trying to deal with it in some way or another.
> And friendly trades have allready disappeared here.
> <sigh>

An "auction storefront", I would agree....less the descriptive adjective
used here....which some may find offensive, rather than "polite"! :)
But indeed, this newsgroup needs some "cleaning up" if it is to be
what it was intended to be, a "polite discussion forum" related to
"boatanchors". I suggest we "deal with it", in a reasoned and rational
manner, as I truly believe it will make this newsgroup a better place
to be, with far fewer "flames", personal insults, ads for everything
from "boatanchors for sale", "boatanchors for auction", "1 year old
rigs some want to call boatanchors", "sex ads", etc., etc., etc.

Where do you suggest we go from here?

Thank you for contributing to the betterment of the newsgroup;
such contributions and suggestions can only serve to benefit us all!

Bill/All:

There've been some really good suggestions and ideas.
There is a real problem in getting a new NG started.
Someone suggested that we could use the Wrecked Radio Swamp
(rec.radio.swap) if we used a standardized heading to
elevate our superior ;-) equipment above the slew.

How about this:

BA-FS: (Boatanchor for Sale)

BA-FA: (Boatanchor for Auction)

That would catch the eye of BA people and thus seperate the
BA ads from the undercurrent of get-rich and land-mobile junk.
We could all get what we want without moderation
or the fight to start a new group. Only a change in
charter and a *polite, civil* campaign of notifying posters
and politely directing them to the new idea would be needed.
There will be a few malcontents-- There always are.
But their arguments would be pretty thin.
I'll betcha things would get alot "cooler" all of a sudden.

How tough is it to get a charter changed? I'm not
a bit-head so don't know these internetty things.

Oh-- one other thing.
Do you think that, if the charter is changed to direct sales
to the swap, it would be a good idea to specifically
state that "wanted-- this-r-that part"
and "Free to good home (or for postage)" posts are OK?
I would say that they are more in the spirit of
helping each other then selling and should be allowed.

Well, I've lost the link to that nice tube database (the one that starts with a 6AK5, and gives brief specs and a pinout), and 30 minutes of net searching hasn't turned it up. Can some good soul give it to me? While I'm begging, are there any other good ones out there? Thanks.

The R-392 draws less than 3 amps at 28V.

The R-392 is manually tuned.
It's companion transmitter (the T-195/GRC-19) is automatically
tuned. The T-195 has an Autotune mechanism which sets up the desired
band & frequency, and also a servo-tuned mechanism which resonates the
final and tunes the antenna.
(The R-391 is an R-390 with an Autotune mechanism for frequency
selection. Incidentally, the R-391 manual mentions an alternate power
supply module which uses a 28V dynamotor rather than a transformer &
rectifier setup.)

>I would like to get the pin out of the power connector if possible.
>The unit looks like new and I hate to see it just sit in the closet.
>Any info would be better than what I could fine...
Pinout is like this:
Pin A - +28VDC B+ voltage
Pin B - Break-in relay control
Pin C - Microphone
Pin D - +28VDC filament voltage
Pin E - Ground
Pin F - PTT switch on Mic or Key
Pin H - A-F Output
Pin J - N/C
Pin K - Carrier Control

To get it to run, hook up +28VDC to pins A & D, ground to pin E, and
a 600 ohm speaker between pin E and pin H.

The R-392 is a nice radio, very sensitive and even reasonably selective given it's use of LC filters. It is a good band cruiser and works well with minimal antennas.
It uses a plate voltage of only 28V. Note that B+ and filament voltage are brought into the R-392 on separate connector pins. I've heard discussion re the use of +28V on the filaments and up to +50V on the plates. My R-392 will consistently hear .1 uV on all bands with only 28V on the plates.

73 and good luck with the radio!

Personally, I like this idea very much, Dave, and would hope
others will offer their comments and suggestions. As you state
above, if we were to place ALL equipment for sale/for auction/
wanted/trade ads in "rec.radio.swap", and simply use "codes"
such as you suggest in the "Subject" line there, it would be
quite simple to identify ads we wish to read...and not read.
This would allow this "boatanchors" newsgroup to be what it
was intended to be...a place for "polite discussion" of, and
furtherance of the hobby of "boatanchors", and it's many facets.

As far as "Free merchandise ads", I don't personally see any
problem with them being posted in "boatanchors", as long as
they somehow relate to b.a.'s. Of course, some may not agree...
but I doubt that lawnmowers would be the items posted here as
"giveaways"! <g> On a "more serious note", there are many here
who are "serious" about boatanchors, and who have much to offer
this newsgroup and those who frequent it. I believe that by
moving the ads off to "rec.radio.swap", and clearly identifying

them for what they are (i.e., "BA-FS", "BA-FA", etc.), it will
have the desired effect (turning this group into what it was
intended to be, while still having a place for those who wish
to buy/sell/swap/auction equipment (boatanchors, and other gear).

Let's run this by the group, and see how others here feel about it.
Comments and suggestions, please, silent majority...?
We know you're out there, so please do participate and share your
valuable input! That's what it's all about, right?

> How tough is it to get a charter changed? I'm not
> a bit-head so don't know these internetty things.

There is a protest afoot in this great land!
A protest to the FCC. We want to send a message
to them that we are sick and tired of their
lack of enforcement! We want to send a message
to the FCC that we're tired of the garbage!
The more people who participate in this little
protest, the more we send a clear message to the
FCC and Congress that we're mad as hell and we're
not going to take it anymore!

The protest is easy. Just say your callsign
backwords! Nothing cryptic or illegal about
that. Anyone can easily figure out who you
are. But imagine if thousands of hams started
giving their callsigns backwards! It would be....
revolutionary!

I know....it's only symbolism over substance....
but it just might get their attention!

Example: W9ABC becomes CBA9W

Now...go take on the day.....

2944. ebay postings vs. total newsgroup bandwidth

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-22 00:00:00 UTC
From: ross@hypertools.com
Message-ID: <3607f5e5.20093719@news.willapabay.org>
Source record: 98586

BAfolks -

Seeing all this fuss over ebay 'for auction' postings, I looked through the archives of rec.radio.amateur.boatanchor post titles stored on my PC here.

I found:
- 996 total postings
- 33 postings were 'ebay auction' notices
- 13 postings were direct follow-ups to 'ebay auction' notices.
- 167 postings had to do with pro & con discussion re ebay postings.

Lately, ebay postings generate a lot more heat than light. Take away the 33 + 13 + 167 postings from the 996 total postings and you are left with 783 'non-ebay' posts.

Assume now that all this ebay fuss was over (i.e. that ebay 'FA' posts were allowed and that they generated no discussion whatsoever). We would have had 783 'non-ebay' posts and also 33 ebay 'FA' notices, and the ebay notices would amount to 4.04% of total newsgroup postings.

This 4% doesn't bother me at all, and I'd prefer that related ebay listings were allowed in this newsgroup.

I'd suggest that:
- All ebay posts titles started with 'FA ebay' or some other identifier.
- All complaints regarding 'FA ebay' posts went directly to the post's originator via email, rather than as a follow-up post to the entire newsgroup.

Dan,

You are right about the kill file. It works very well. However, I do not
know if you can create a kill file when using the newsreaders in Outlook,
or Netscape, or if your are reading from Deja News. If you are using
Newswatcher on a Macintosh, a filter can be created for pretty much
anything you don't want to see. I believe that Free Agent for the PC can
do this also.

Source record: 98591

For Sale: HQ-170, no clock.

Cosmetic condition fair. Some scratches, unsure if knobs are original, but they look good.

Plastic dials are in good condition with no cracks.

I think there is a dent on the top of the cabinet, not on the front panel. It never bothered me :-)

Electrical condition fair. I used it for working 80 meter AM and it was excellent for that. 40 meters is out of alignment, the other bands seem ok, but I did not spend time on them. I never opened the cabinet since I purchased it from someone else on the net, so I am unsure of the internals. S-meter is fine. Pots/Switches seem to be ok. I've owned it a couple of years and used it at least once a month, sometimes more.

I have a photo-copy of the manual (in a plastic soft-binder).

$100 firm plus shipping from 07724 including bubble-wrap, peanuts and a new box.

Payment to be made by Postal Money Order or cash. If a check is written, I will wait for the check to clear before sending. Money back minus shipping costs if returned within 2 weeks in the same condition as sent. Notification prior to return is required.

I don't check this account on nights or weekends, so please be patient.

>

I never said that YOU did anything, I said that it is done. Go back
and read ALL my posts, AND please refer to the above recommendation
regarding professional help on your personality disorder

>You, sir, are calling me, about whom you know
>almost nothing, a liar, thief and swindler.
>It isn't true and I resent it.

I never called you anything, I said that stuff happens, it has been
proven that the same equipment shows up after a supposed sale
to someone by a account in the name in the same person, or fake
accounts.......NOW IF you feel guilty, maybe you SHOULD review
your business practices. I never represented you to be honest
OR dishonest. Your resentment is surely part of that personality
disorder.

>I might feel free to return the favor and make unfounded
>accusations about your parentage and lack of
>morals and decency, but I'll refrain from doing so.
>You've made your level of education, morality
>and common decency perfectly clear.
>
Before you do so, read ALL the posts, and please refrain
from that name calling and such, I never said one word
offensive to you, and you should refrain from doing so to me.
My level of education is probably not as high as yours as I
went to a trade school to work on aircraft. Remember that
when you fly next time...hihi
As to my morality, you have no idea about my morality, family,
upbringing, or common decency. The only thing I made clear
was that I thought that stuff happened . I don't think you really want me
to prove all the unethical things that go on at Ebay.

Thank you for your insights and thoughtful input, Bill!

I believe further discussion here of the issues you raise would be
beneficial to us all. In reading the "FAQ's" of this newsgroup,
it has become apparent that many of the messages seen here often
violate the intended purposes of this newsgroup. However, since
this is not a "moderated" group, such "violations" are beyond the
ability of anyone to do much more than "gently remind" the sender
of the purpose, charter, and FAQ's of this group. In reality, we
(the entire group of participants) should be "self-policing", we
should have the ability to keep the "signal to noise ratio" at a
decent level, and we should be mature enough to do so in a friendly,
responsible yet reasonable manner.

I hope others will consider your points, and publicly comment
upon them, as they are quite relevent here. Through such an
intelligent, reasoned discussion, perhaps we can all reach a
concensus of opinion on changes which would be beneficial to
the newsgroup as a whole, and the further enjoyment of all.

What say you, others?

A week ago Sunday, at the Gaithersburg, MD hamfest, I seen <sic> both.

> Only two days left and its very cheep so far!

The world is not scheduled to end in two days, is it?
How cheep <sic> is it so far, and how come you didn't post it here
for sale? If you didn't want to sell it here, then why bother us
with it now, when we can't buy it at a mutually agreeable, fair price?

From the comments I've received so far, Dave, I believe both BK and you are headed in the "right direction" with this matter. What would you want to see "different" about a "boatanchors for sale" newsgroup, as compared to the "For Sale" messages that appear in this newsgroup? Are you referring to boatanchors and related items for sale by private individuals, or also those by "dealers", or including those "for auction"?

> Only down-side I see is forcing the group members to
> wade through two groups, so they don't miss
> offers that would interest them. Even before I sold
> anything, I didn't have a problem with sale posts.

Seems to me to be a rather minor "inconvenience" if it serves to improve and increase the chances of easily finding what you're looking for, without having to "wade through" a mass of other messages unrelated to sale/trade/buy offers.

> I look at this like a newspaper. I just don't read
> the articles that don't interest me. It's no
> trouble at all and I think most reasonable
> people feel that way.

Perhaps we differ slightly on this point; I look at this newsgroup as similar to a specific portion of a newspaper, rather than an entire newspaper. In such a specific portion, the focus is somewhat narrow in scope; other items are covered in depth in other parts of the paper. It's "organized", and the "organization" is rather consistently maintained.

> Secondly-- Is there really, truely a large-enough sub-group
> of people that are unwilling to delete messages to justify
> creating a new group, or are we simply hearing a lot of steam
> from a small but vocal minority? I don't know. In fairness,
> perhaps we should find out.

Isn't that what we are attempting to find out here through discussion,
requests for comments and suggestions, etc.?

> If a large portion (say 40%+) of the group is truely unwilling to
> discard unwanted messages, then I believe we should actively consider
> forming a for-sale newsgroup, even though it will cause some extra
> trouble to most members. After all, the newsgroup was formed to serve
> the members, not aggrievate them.

Absolutely! Perhaps rather than go through all the trouble of creating
a new newsgroup, we would be better served by "cleaning up" this group,
attempting to minimize those messages which do not conform to the charter
and FAQ's of this newsgroup. Seems to me, and from many of the comments
I've received so far, that a "general cleanup" of sorts just might be
the answer many of us are looking for. There's really nothing "wrong"
with this newsgroup...nothing that can't be rather easily "straightened
out" by enforcement of the "rules" here, the charter and the FAQ's.

> Just food for the discussion.

Good food, Dave! Might have the makings of a nice meal!
Thanks!

That is the impression I've gotten, Bob, from the majority of those who
have so far responded.

> However, I think it would be a good idea, and I would join such a group.

Perhaps "moderated" is not the way to go, for reasons which have been
pointed out both in this newsgroup, as well as via e-mail messaging.
However, the "common thread" seen in most of the messages has been
that a change may be desireable. Seems quite a few are "fed up"
with the repeated "flames", the "personal attacks", some say they
are "fed up" with the "dealers and their ads", others with the ads
"for auction" disguised as "for sale" ads in this newsgroup.

> E-bay, flames, cross-posts, get-rich, and hot-sex ads spoil this
> page for me, though I find plenty of good stuff here also.

There's pleny of "good stuff" right here on a daily basis.
Unfortunately, there's also some "junk" here daily, which
really doesn't belong here according to the newsgroup charter and
FAQ's. Perhaps with a bit of "clean-up", this newsgroup would be
what most persons here wish it to be.

> No group is perfect....(I just returned from a three hour Church Council
> meeting, which thoroughly illustrates that point!), still, I sure wish we
> could try.

We can, and through input from yourself and others who take the time
and trouble to voice their opinions...we are trying to make this a
better place for all "boatanchor fans" to enjoy!

Thanks for your thoughts and comments, Bob!
If we all work together, surely we can accomplish something good.

2969. Collins R392/URR Receiver Info Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-22 00:00:00 UTC
From: Rich Ripple <raripple@worldnet.att.net>
Message-ID: <360731A0.A3C44805@worldnet.att.net>
Source record: 98635

I'm trying to locate information on a Collins R392/URR (not R390) receiver.
It seems to be very similar to the R390 except that it
is enclosed in an air tight, olive drab case and is only about 2/3
as wide as a R390. The unit runs on 24VDC at about 10 Amps.
I no longer have the pinout information for the power connector.

Originally, this unit was connected to a mating transmitter via a
multi conductor cable. This cable supplied power to the R392 and
also a control signal that set the R392's frequency. When the freq.
was changed on the xmiter, the R392's tuning dials would spin like
crazy until the R392 was tuned to the proper rcv freq. The transmitter
was approximately twice as wide as the R392. It was a spectacular piece of
equipment. Unfortunately it was lost to lightning.

The receiver survived and was used frequently until 1984 when my
father retired from the Navy Reserves. It was operated from a small
power supply. Some how, all documentation was misplaced. I can't
even recall the xmiters model number.

I would like to get the pin out of the power connector if possible.
The unit looks like new and I hate to see it just sit in the closet.
Any info would be better than what I could fine...

Thanks!

R. Ripple

Point well taken, Dave. How would such a newsgroup differ
from the present "rec.radio.amateur.swap" newsgroup? Do
you feel that there would be enough "ads" for only boatanchors
to justify such a new newsgroup? Or might we be better off
simply banning all ads here in this newsgroup, referring them
to "rec.radio.amateur.swap"? Personally, I like the "division"
between "general ham gear for sale/swap/wanted" versus what is
now here, the "boatanchor rigs for sale/swap/wanted". Whether
indeed this is the place it should be, or should remain, is a
matter which apparently warrants further discussion by all.

> Don't get me wrong-- I don't, personally, support

> to a new group.

For that reason, I felt it appropriate to change the "Subject"
line of this "thread". Hopefully, changing it won't mess up too
many who may have been trying to follow it.

> Oh yes... couple other things we might want to check into.
> Might have some trouble getting "rec.radio.amateur.boatanchors.forsale"
> through the voting process. The powers above will probably counter with
> "you've already got rec.radio.swap." That could be a problem.
> God knows I'd hate to try and getting boatanchors to market on the
> "Wrecked.Radio.Swamp!"

Semantics, really. If there's a clear difference (or one that can be made clear!), getting it through shouldn't be too difficult. I've gotten a few boatanchors that *looked* like they came from "rec.radio.swamped"...but they didn't come from anyone in this group! <g>

> It's a REAL mess. Then there's the hassle of
> trying to get most internet providers to offer it.
> We can't even get Netcom to pick-up the BA photo group.

Shame on them!

> There is already "rec.radio.amateur.forsale" but very
> few IPs carry it, so almost nobody uses it.
> I can't get it here.
> All this could cause a real mess.
> Still-- no hill is too high if folks work at it.

With some work, "messes" can be cleaned up.
I'm willing to do what I can to help, if there's enough interest and support. If not, we should simply let it die. There does seem to be some interest in "changes", but the direction and nature of such "changes" needs to be more clearly defined. Only then can we expect to get support for the changes. I suggest we try to define what changes we would like to see, and hope others here will offer their suggestions, comments, and ideas. Speak up, please, silent majority! Your views are needed, and will receive the respect they deserve.

Sorry to hear Don Merten has SKed. I did not know that.
Don gave me my first job in the electronics industry when I
was still in high school working summers. His company was
located at 72 E. 2nd Street, Mineola, Long Island, NY. I
built the production prototype of the 1 KW linear in the
1950's and worked on the assembly line. He ran a good
company in those days. I think when they were bought out by
Dynamics Corporation of America and merged into REL that
things started to go down hill. I left in 1956.

Dave, are you just having a bad day? This is out of character for you.

Dave, those of us raising these concerns are not trolls or dealer-haters. I've bought from Larry B4, and we've all tossed things back/forth on a better list elsewhere in past years. Stripping way the heat from the light here, I (& I think, others) certainly don't dislike you - but we don't particularly see you are doing us all some messianic favor, either, because you simply aren't - you are being a businessman. There are barns full of BA's all over the country and many of us have spent considerable time therein - possibly as much as yourself - but haven't chosen to make a career of our hobby. I'm not speaking against doing so, but business is not the collective mindset here on the NG, even though it is occasionally helpful when our own scrounging falls short.

Certainly, the Ebay pointer posts are not disallowed by the charter - a correct point - but it is the spirit here that counts & is at the heart of the matter. Not everything that is allowed in life is always wise or kind. The obvious fact that this NG is becoming half Ebay auction pointers surely violates the intent/spirit of what we come here for, and is a growing annoyance for many. I do not think it takes rocket science or a degree in human relations to realize that asserting your right, however valid, to offend others is rude behavior. Please rethink your stance on this - would you find these pointers all over Jack's list? What about the limited server space we all have to deal with? What is the matter with rec.radio.swap, and other places where one expects gear to be advertised, as distinguished from discussion & mutual edification? For that matter, what degree of said discusson & edification have you been contibuting lately, which is the meat & potatoes of enjoying this hobby?

Many of us got into BA's awhile back when the rest of the radio hobby became a greedfest, so that we could still have some fun. No one expects to do this for free, but neither do we expect continual sales & auction bombardment in the middle of a discussion forum. It also is rather implicit, nomatter what face one puts on it, that the intent of selling via Ebay is to obtain the highest selling price - this is not in the same category as trading with your hobby friends and simply trying not to lose money. When BA's have been commercialized like antique radios, where do we turn next for fun, and what happens later to all the previous auction buyers when the collectible bottom cyclically falls out?

Understand that it is entirely normal for annoyed people to express themselves in unpleasant terms, and try to see the message being sent. This place is starting to look like a fucking auction storefront, Dave, and helpful, friendly trades are falling off in this environment. This

is important to those of us who are hobbyists, not businessmen here.

> 73 Bill.
> Terry

Hi Terry - You might consider subscribing to one of the two BA email
lists. The list-owners insure that posts remain "on topic." You'll
find *lots* of discussion of gear and radio history. There is even
a list devoted to home-brewing with tubes - the fellows on there
are running home-built Hartley transmitters and regen receivers;
theory and operation of regens are thoroughly dissected on that
list ("Glowbugs").

The subscription instructions are as follows:

1. The free BA list:
To: listserv@listserv.tempe.gov, and only write:
subscribe boatanchors

2. The pay-per-view list ($25 per year, I believe):
To: listproc@theporch.com, and only write:
subscribe boatanchors

3. The homebrew-with-tubes list:
To: majordomo@piobaire.mines.uidaho.edu, and only write:
subscribe glowbugs

With e-lists, the articles arrive by email, so you'll want to check
your mail daily, otherwise your mailbox will fill up!

> winding, etc. Such could also be cross-posted to the for-sale group.
I think I understand your concern. That would be more
"traditional," but here's where we run into a problem.
Tubes, transformers, etc. are parts and I sell them when
I recover them from those smelly old barns in Texas.
I can't set a reasonable market price on, say,
a kilowatt modulation transformer because there's
not enough market data to draw on. Using prices from
the surplus houses won't work for small-potatos like me.
They charge way more then I could. Trying to bluff
and blow and "guess" a decent price is a bad idea
that ends in disaster or hurt feelings for somebody most of the time.
I could tell you some horror stories on that one.
So, like millions of people before me in similar situations,
I'm going to hold an auction to fix an agreeable price.
And there we are with the same problem again.

I don't think we can do half a loaf on this and make it work.
I really believe we must move all sales off this list
or leave all of them here. Otherwise we're just
asking for more fussing and nit-picking.
The more I think about it, the better the
idea of moving all the sales sounds.

Just MHO, of course.

Source record: 98480

Late last night while thumbing through some old 73 magazine's I came across an ad from a company out of Harvard, Mass. called Herbert W. Gordan Company. It was on page 77 of the November '66 issue and described the Collins R-388, 389, 390, 390A and 391 series of our favorite heavy metal. I decided to look for other Gordan ad's and found that they starting around late '65 to the early 70's. If any of you have these issues out there you may want to look this stuff up. They sold a variaty of new and used ham and surplus gear with lenghty commentary describing their products. In the Jan. '67 issue there is a whole section, a mini-catalog, that describes the company. Along with the ad's are usually photographs of the equipment. In that same issue on page A24 look for the ad on the Racal RA-17. Does anyone know what happened to HW Gordan? I would enjoy knowing more about the man and his company. Hey Herb... you out there anywhere? QRZ? 73, WA2NPL

>Does anyone know of a tube tester that will test an 813 tube?

Allen -

The only instrument I know of that can test small transmitting tubes is a laboratory-grade vacuum tube bridge, such as the General Radio Types 561-D, 1661-A or 1661-B. The 1661-A is rated for up to 400 ma plate current at 1500 volts.

These bridges require an external 1 kHz oscillator and null detector, as well as external A, B and C supplies. Unfortunately relatively few were produced - they were intended for use by tube manufacturers both for R&D and for QC testing. I have been looking for one for some time with no success.

To say that "all you have to do is hit the delete key",
or "use a filter", or "ignore it"....does not solve or
improve anything, in my opinion. It's just "covering
your eyes", pretending it's not there. Fact is, it is.

I have a Heathkit Model # HD-20 100 KC Crystal Calibrator. The face looks ok, the top eh, ok too . The sides have some corrosion on them. No dents or deep scratches. It had one of those funny 9 volt batteries in it that went into pretty bad corrosion. I removed it and the inside is really quite clean. Everything seems assembled but the connection to the top binding post needs soldering. There is no manual or any paperwork with it. It could probably be cleaned up a lot better than I did. I just didn't want to toss it in the dumper if someone could use it for any reason. It's yours for $0 but maybe $2 for shipping. Anyone interested, reply on the ng with your e mail address and I will e mail you direct.

Sometime In the early 70s, Wayne Green put something into his monthly column about the demise of the HW Gordon company. Seems there was some kind of a dispute between 73 and HW Gordon. I always did like their ads though. Very informational and interesting reading.

Hello Allen OM,
You can measure the characteristics of any tube, merely by applying plate, screen and filament voltages, and varying the grid voltage and plotting out a few characteristic curves by hand. That will tell you basically whether the tube is working or not, and its transconductance, etc. Tedious but works; I have done this with a 450TL. You may need to drive the grid with a low duty-cycle pulse to plot high levels of current and voltage (lots of watts if left on steady). Just be careful with the voltages involved.

GL and 73,
Don, W6JL

> Does anyone know of a tube tester that will test an 813 tube?

The late, lamented Ham Radio magazine published a nifty schematic for a dedicated 6146 tester -- I built one of these and it worked like a champ. I had plans to modify the circuit for 813s and for 4-xxxx tubes, but never got 'round to it.

This would be a worthy project for somebody to develop....

Join the club! I dont think that there is a trimmer in there but I remember hearing that the crystals that were used for the offset werent too good and they would drift off freq. About 10 years ago and after KDK went out of business, someone in Tennesse was selling replacement crystals to cure this problem. If you find out anything about this guy, please let me know.

Still have two of the 144's myself. One with a selective call unit and the other with the AWE scanner.

> George
> W3GEO

Another thing that makes me wonder - does having a high reserve bid mean 'I'll sell it to you only if you're willing to pay more than this high price'? Isn't that like trolling, in a different context?

Every auction I've ever attended(in real life) had no reserve bids - I suspect real auctioneers wouldn't do much business if they had to put reserves on everything their client had to auction.

Long and short of it is this: some use auctions as a means of disposing of surplus property, others use it as a means to try to make a quick profit, as high as possible. HOWEVER - if no one bids, it doesn't work.

Sellers are not the real problem, it's the fools who keep the crooked ones in business that are the problem. The type who will pay $250 for an S-38, a $35 to $50 radio at any 'fest where I've seen them.

Reserve bid should be an automatic red flag, guys. I'f the seller is so certain that he needs to get at least $XX for something he should be selling it outright, not auctioning it. This should be a very obvious warning that 'I'm looking for big bucks on this item'.

Guess I was lucky, just picked one up in great condition with covers, heavy duty cabinet and matching ext. speaker with manual for $300.

They certainly are a nice receiver. That radiogouger guy has one listed for $1500 - not that he'll get it or that it means they're worth that much.

My feeling is that it's a $400 - $500 radio, but good luck anyhow ;)

Certainly a nice rig to listen to, and fun to operate with the three knob tuning.

Sure - this works well, so long as the message has been represented honestly up front. Too late onnce you've downloaded and opened a posting only to find it isn't what the title claimed.

It's quite obvious that most of us are capable of posting honestly and acting responsibly by the quality of most of the ads. The dishonest ads are still in the minority, but growing. This disturbs me.

Good point - why not do something of substance like writing a nice,
polite clearly thought-out letter to the FCC instead of something
passive that only adds to the mayhem? I'm sure they will have no choice
but to respond if *enough* amateurs show that they are not only
concerned enough to write, but responsible and intelligent enough to do
it in an adult manner.

We really need to do this is response to the ARRL proposal to sell more
radios for their advertisers. FCC plan looks better than ARRL's - any
surprise?

Well, what's it worth is not what you are looking for.
With speaker, 3 filters, and mint shape... about $1500.00
That is 'cuz of the recent craze in old rigs.
I would pay significantly less than that.
The Japanese would pay significantly more.

3054. Another HQ-160 Question - front trim removal

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-24 00:00:00 UTC
From: doragsda@polymail.calpoly.edu
Message-ID: <6ue8hm$l67$1@cscnews.csc.calpoly.edu>
Source record: 98307

Has anyone ever successfully taken the trim ring off that surrounds the entire front panel on a HQ-160 (or probably the same on a 150 - 180). It looks like it's split at the bottom with a clip holding it in place, can I just pry that clip loose and remove the ring (my panel is great, but the trim needs paint). Wanted to ask before I mess something up fatally. Thanks.

Dave

Greetings All - This box followed me home. Its a McKay-Dymek Model DK-33 receiver. Looks to be all solid state, phase lock loop design, for SSB, CW, AM, and RTTY.

It doesn't work and I don't have any information about it.

Can anyone help? Of course costs will be paid.

Thanks,

73's Bob W7AVK

> The units value is 200pf, and it is rated at 15kv.
>
I just got one from Fair Radio, plus a couple of 50 pf's.. They were/are made by Erie. In a Hollowstate PA I built years ago I also was given a 200pf X 15KV part value. It turned out that the thing wouldn't work on all bands until I replaced the 200pf one with 4 50pf's in parallel. Just took a pair of LARGE fender washers (2-1/2" diam with a 1/8" center hole) and drilled them through in 4 opposing positions and, after silver plating them, bolted up a ceramic cap sandwich. These worked fine and cut the spurious junque about 99%.

Fair Radio: http://www2.wcoil.com/~fairadio/
Erie Caps are sold by Allied Radio, Newark, Mouser, etc..

> Looking for the high band module for the PRC-128 and PRC-68B.
> If you have it pls email me price.
>

I got these modules with my '68b and '126, but as I do nothing on the 2M ham band they are in excess to my needs. I had to buy them, at a premium, in order to get the (pristine) radios.

I also have a couple of the original military O.D. canvas carrying cases/bags, a couple of the new (green comouflage) carrying cases/bags, and plenty of new antennas, both the long (latest issue) rubber-duckie and the PRC-25 "tape-measure" metal ant., new handsets, microphones, and the hard to find current issue "earphone-michrophone" on a wire and the auto-keying "ear-mic", the "test and tune" maintenance box/tester, and . the latest issue NIMH (with lcd charge indicator) batteries.

Make me an offer. They both work and are up to full specs.

E-mail me your phone # and I'll give you a call if you're interested

Hello,
The Star 600 is not a part of Star line, the Star line is consisted of ST700, transmitter with pair of 6146's and using Kokusai 2.1 KHZ mechanical filter for SSB generating, the SR700 is the receiver with triple conversion similar to Drake 2 B in IF frequency schemeusing LC filters Both looked like somewhat copy of Collins S line..They were considered one of the best Japanese made during 1960 era but it is actually dissapointing, I have 2 sets of complete Star line waiting to be restored. For general information, Star used to make AM and FM tuner kits for general public, not for hams only for about 10 years until late 60's and went bankrupt and most of the engineering staff was hired by Yaesu and Trio (Kenwood) who eventually developed FL100,FR100 to FRdx400,FLdx400 then to FT100 to FT101 for Yaesu and TX88 AM transmitter and 9R42,9R59 rcvrs to TS510,TS511,TS520,TS820,TS830, etc. for Trio Kenwood. The SR600 is the lower priced rcvr with double conversion with LC filters, it is not a real good receiver, I would say Drake 2B outperforms any of old Star receiver, SR500,600,700.
Best luck to you.

I aquired a 6dB Ringo last year without any manual. I checked it and it would work great on 163 MHz but I need to retune it for 146 MHz. Besides letting me know that it has a reputation of a dummy load, would someone pass along the basics for tuning it. Like the length of the lower and upper sections (146 MHz, how to adjust the ring, and the stub to get the swr down.

Thanks for any assistance.

I have been hearing lately that certain sellers (I'm not saying this one) are getting on eBay with faked Identities and bidding up their own items.

Someone sent me an e-mail claiming that they knew this was sometimes happening when radios sell at auction for 5 to 10 times their street value.

I know eBay has a policy that is supposed to prevent that, but I can see how they could not possibly police it enough.

Maybe that is why we see so many things on there get bid up to absurdly high prices? I don't know. I just don't bother looking at eBay any more.

Has anyone tried the new one: http://www.Hamauction.com
??

Gentlemen,
The FCC has been sold out. Where the wallpaper of electrical engineers and technicians once hung, is now the coverage maps
of spectrum salespeople...sipping gourmet coffee while they decide what the price of air for this or that market area should bring
at the auction. Thank the lobby who instigated, the elected officials who were willing to conspire to sell out a natural resource
belonging to the people of the United States, and the bankers who were willing finance the crime.
Those same spectrum salesmen devised the idea that has been amateur call letters have a price that people are willing to pay. Those of you like me who paid to have Uncle Karl's callsign remain in the family, should now have more to say about the
enforcement of ham radio...now that we are paying for the service. Write your congressman.

Source record: 98407

What makes you think that the FCC is any different from other government branches? Before you show your individualism too much, be sure to understand the "Conditions of Grant" connected with your license.

The FCC "grants" you a license and reserves for themselves certain rights - including the one to inspect your station at any reasonable hour without a search warrant! Before you get nuts with protests, just understand the "he who giveth can also taketh away". Is it worth a court battle over your license to be right about something that really doesn't affect you to that extent?

Protests have their place - but not when you risk being a martyr. The only way to beat the government is to play within the rules and change things that you don't like. In this day of "instant gratification", there are few who will take the time to do thing right.

It is also true that "the FCC just doesn't care" and has no consistent rules enforcement. If you don't believe that, just listen to 3901.5 kHz any evening. It is a shame to fragment Amateur Radio into individualistic groups, but this kind of protest will do just that - and the problems will not be solved.

3082. Alpha 374 HF Amplifier FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-24 00:00:00 UTC
From: W8EK@usa.net
Message-ID: <6udkg7$89l$1@nnrp1.dejanews.com>

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.ham-radio.marketplace

I have an Alpha 374 HF amplifier for sale.

It uses three 8874 tubes (which are in good shape), to easily put out the full legal limit. This is similar to the amp that ETO featured in the ads a few years back, where they put a brick on the key, and left it on for days. It is a very rugged amp!

This amp has a "pretuned" position for each band on the band switch (actually two for 10 meters -- one for the high end and one for the low end), plus a manual tune position on each band. In the "pretuned" position, internal tuning and loading can be adjusted for your particular situation (match your antenna at your favorite portion of the band).

It has the optional hypersil transformer in it.

I have the original shipping boxes, and can ship, but it is heavy. Pick up would be preferred. I am in north central Florida.

Original manual is also included. Cost is $1695, plus shipping from Florida, if I need to ship.

E-mail to W8EK@fdt.net or W8EK@usa.net

Thanks.

73,

Ken, W8EK

If you have no luck on an original, Antique Electronic Supply in Tempe AZ may have one you can adapt. Don't have my catalog here but they are on the web at tubesandmore.com
It is about 500V ct @ 80mA for B+, 6.3V @ 3A, 5V @ 2A.
I am just recapping mine and helping a fellow in Edmonton fix his, so I just happened to have 'all the numbers' at hand.

Neil S.

From: doragsda@polymail.calpoly.edu
Message-ID: <6udm6dpbb1@cscnews.csc.calpoly.edu>
Source record: 98416

In article <36092F0C.7FA7@pop.state.vt.us>, tbigelow@pop.state.vt.us says...
>

>
>Reserve bid should be an automatic red flag, guys. I'f the seller is so
>certain that he needs to get at least $XX for something he should be
>selling it outright, not auctioning it. This should be a very obvious
>warning that 'I'm looking for big bucks on this item'.
>
>73, Boomer KA1KAQ

Nope. This is an opinion without any facts to back it up. It is FACTUAL that the reserve bid is one of the tools that ebay provides to protect both the seller and the buyer - allowing the seller to say, " I RESERVE the right to not sell it below this price" - the seller still can sell it at a lower price, and they frequently do, but they want to reserve that right. Buyers are protected from "shill" bidding by three things on ebay: minimum bid, reserve, and the rule which allows a seller to legally and openly make one bid on their own item.

It is not factual that the reserve is a dishonest method of selling - make your best bid and it'll either be over the reserve or not. I've sold a few dozen things on ebay, bought a few hundred, I've used the reserve when selling about half the time, and most of those sold for several times what my reserve was, and of those that didn't hit the reserve, most I sold to the high bidder for their high bid.

As far as the economics of purchasing old radios on ebay - I think few people have any idea what their hamfest bargains really cost them. For me to go to a hamfest/radio show, I have:

500 miles round trip @ $0.26/mile = $130.00
Motel (fleabag) @ $45.00
Meals - $25.00
so I'm up to $200 for a weekend, plus I don't get to go fishing or camping with my kids that weekend, which is essentially a priceless experience for them. Assume I have to go to two hamfests to find a SX-28 in restorable condition, and it's a pretty good deal at $50, but when you factor in everything else, that $50 hallicrafters just cost me $450. Suddenly the $350 SX-28 on ebay is looking pretty good, and I was able to find it in about 15 minutes of running the ebay search engine, I was able to think about it for a few days while the auction ran, I was able to ask the seller questions about it, I was able to check the sellers feedback. At the fest (or on the newsgroups), there would be a line of others wanting to grab the deal, so I would have to maybe ask one quick question (they might sell it while I was asking, though) and decide in about 15 seconds whether or not I wanted to say "I'll take it".

All of this talk about "big bucks", "greedy dealers", "unethical money grubbers", etc. used in the context of ebay sales is a lot of hogwash. Provide FACTS if you're going to make allegations. These hallucinations of nefarious intent are just that - imaginary. Facts are what make an effective point; provide them.

Folks,
My tube tester (an old-but-working EICO 625) doesn't list
settings for these "newer" tubes on its "scroll". Could
someone direct me to some help?
The tubes I cannot find EICO 625 data for are...

6GJ5
6JB6
6KE6
6GK6
6GH8

(These are tubes from my NCX-5 transceiver.)

Thank You!

Dave,

First, the full disclosure.... I use ebay, but maybe I really do not know
how to use ebay... if that makes any sense :)

My nit with the reserve price is that it is not published out in the open
for all to see.
When I see a lot of bidding on an item, and the bid seems to be well above
the actual "worth"
(I freely admit subjectivity here) of the item, and the notice "reserve
not met" is still showing, I have to wonder. Put the reserve out there and
see who bites.

I agree to some extent with your point about the true costs of hamfests.
If all you are doing is looking for a very specific piece of equipment and
are not interested in anything else which might be for sale there, you are
correct. It can be a long and expensive process. I personally like the
serendipity aspect of hamfests though, never knowing what will be there,
as well as the social aspects, the trip itself, and some of the forums
which are usually scheduled. I typically travel a 250 mile radius several
times a year to attend them.

It could be worse. My wife shows dogs in AKC obedience trials and breed
matches. We go a lot farther than 250 miles for some of these. The dog can
be in the obedience ring for less than a minute and fault on a command,
and you are literally done for the day.

I guess it all depends on what you enjoy doing.

Hello-

I have a Hammarlund HQ-110 that was my granddads radio. I am trying to get it operational but am having very little luck. My electronics knowledge does not include tubes!

Can anyone recommend a good vintage radio repair house in the Raleigh, NC area.

If you could please respond via e-mail I would appreciate it.

73, de Matt

Source record: 98422

(B.A.-- I'm not interested in getting in another flame war
on this issue with you. Please be a gentleman and
don't try to start one. Not because I asked, but because
the other users asked. Thank you.)

I've read the threads, listened to many well-thought points
and options and answered tons of email, about 12-1 positive.
I've reached a personal decision which I do not wish
to further debate publicly.
I've concluded this:

1. Notwithstanding a lot of posts by a very vocal minority
(including sweeping and demonstrably false accusations),
Most users of this news group do not, in fact,
have a problem with For Sale postings (Ebay or otherwise)
as long as they are clearly and honestly flagged
as "FS" (For Sale) or "FA" (For Auction).

2. If, indeed, the majority of the users want to exclude
for sale postings, the charter can be changed and all
sale postings politely directed to the Wrecked Radio Swamp,
where "FS-BA" and "FA-BA" could flag them so one has
a better chance of seeing them in that slew of XXX offers
and land-mobile trash.

Therefore, I personally conclude that posting
"FA" notices here is acceptable to the majority
and within the rules. I will therefore continue
to do so. If and when that situation changes,
I will cheerfully comply with the revised charter.

I believe this to be a fair and reasonable conclusion.
I will not engage in further public flame-trading,
verbal rock throwing or sand-kicking over this issue.
I will answer private email about it.

If someone wishes to show the group how ungracious they
are-- if they desire to display bad manners
or otherwise show their behind before the
users, by all means proceed.
However, I think the vast majority will be
reasonable and civil, as they always are.

Kind Regards,
Dave Stinson AB5S

Seems to me that if you want real action you must copy your letters to the folks who control the budget of the FCC - your Congressmen. Most are available via E-mail, though they tend to require a complete address and will reply via snail mail. We are blessed with two US Reps and two US Senators here in NH who are very responsive!
BTW: Should this thread not be moved to the Equipment newsgroup, at worst, and the Policy newsgroup at best? 73, DavidC AA1FA

Hi Todd et al... $300 was quite a bargain for a nice RA-17... in fact, $500 would have been for a 9.5 or better. It is possibly the best tube rcvr RACAL ever made-certainly one of the best-and I wouldn't trade mine for a pair of R-390-As (and yes, I have one of those as well.) The going rate on RA-17s is more like $550-$750 depending on condition/etc. Like I said, yours was a bargain.

Jerry OM,
You would use any of a number of cookbooked designs to be found in the usual sources such as Doug Demaw W1FB's QRP notebook, ARRL's solid state design, etc. A single fet or mosfet can give you 15-20 dB of gain. You can agc the amp too if you want to, but probably not worth the trouble. Just build it on a small scrap of PCB, ugly-style; its just a few components.

73 and GL,
Don, W6JL

This has definitely been the "majority opinion" of those who have e-mailed me also, Dave. The majority do not have any problem with eBay "pointers" being posted here, as long as they are clearly identified as such (i.e., "FA" [For Auction] or "FA eBay") in the message "Subject" line.

> 2. If, indeed, the majority of the users want to exclude
> for sale postings, the charter can be changed and all
> sale postings politely directed to the Wrecked Radio Swamp,
> where "FS-BA" and "FA-BA" could flag them so one has
> a better chance of seeing them in that slew of XXX offers
> and land-mobile trash.

Once again, the majority of those I've heard from do not desire to "ban" boatanchor ads here, as long as they are "boatanchor-related", and as long as they are clearly identified in the "Subject" line as to whether the item is "For Sale" (FS) or "For Auction" (FA). This would serve to clearly identify messages with minimal confusion and disruption, allowing those who are not interested to merely "pass on by" any messages they do not wish to read.

It was pointed out by more than one person here that the "traffic" in this newsgroup is not of sufficient "volume" to warrant "banning" all "ads" here. I'd have to agree with that position, based on what I've seen. The idea of "moderation", i.e. a "moderated newsgroup" has very little support, therefore, I believe further discussion of that idea is no longer necessary.

So, where do we stand? Apparently we "stand" with everything remaining "the same", other than a desire by many to clearly "identify" ads in their "Subject" lines here. Enforcement of this would, of necessity, be "voluntary", with cooperation

requested from all who post "boatanchor ads" here.

That pretty much sums up the responses I've received to date.

Dear All,
I am interested in the prices that you guys are quoting for RA17s. I know that they are probably more common over here, after all this is where they were made, but a "brand new" one, in original packing unused costs about 140 - 150 ukp, say 250 - 270 USD whilst an average goer is about 100 ukp, sometimes less. SOmeone will squeal that I've got these wrong but there you go.

Here they are common SWL sets, I intend using mine with a home brew tx when I get round to building it. Yes, they are one of the best valve receivers ever built, I really will get shouted at for that :-), and very industrial in their capability to absorb damage and misuse.

Cheers

Robin

QST had plans several months ago for a cheap "DC to daylight" preamp based
on an MMIC. It doesn't get much simpler than that.

I believe this device was used in the Globe rigs to help them out on 6? Not sure. It is in good condition and looks to be complete. It is built on a minibox type chassis and has an octal plug on its base and 2 tab brackets to hold it onto the chassis. It has a 12AT7 and a 5763 in it, with shields. Looks stock and has a serial number of GH5447K stamped on it. A $55.00 US Postal Money Order will bring it to your door in the 48 states via US Priority Mail.

Thanks,

Chris KX0Y

I have a Viking11 Civil Defence version (which should make it factory wired) for sale, or will consider a good SX62 as part of a trade. This transmitter has been in storage for several years, and was owned by a Civil Defence organization for several years previouis. I was given to understand that it had less than 100 hours of operating time on it. Looking inside, it would appear to be true. Unfortunatly, a large "sticker" was applied to the front of the cabinet just over the Johnson logo on the right side, and the cabinet does have some scratches and paint touch up on it. One would downgrade the cabinet to a 7. The only mod to it was the addition of push to talk. $225.00 plus foam in place packing and shipping. I have a copy of a manual for it.

I have a friend that's looking for manuals or copies of for a couple of
pieces of Motorola test gear he just bought. They are:

Motorola Freq Dev Meter - model S1323A
Motorola Signal Generator - model S1319A-1

If anyone has these manuals and is willing to part with them or make copies
of them please email me at rheindel@sprintmail.com and I'll pass the info
on to Bob.

Tnx & 73

Just for your information, we now have thousands of schematic
diagrams, old books, magazines, publications of all kinds and much
much more available on CD-ROM. If you are interested in the best tube
manual ever written, or perhaps the best radio theory book, or perhaps
40,000 old radio schematics compiled by John Rider, Radio Era Archives
has these and much much more. Come see how we're preserving these
great old publications on CD-ROM at our web-site at
http://www.radioera.com

See you there . . .

Seems to me that if you want real action you must copy your letters to
the
folks who control the budget of the FCC - your Congressmen. Most are
available via E-mail, though they tend to require a complete address
and
will reply via snail mail. We are blessed with two US Reps and two
US
Senators here in NH who are very responsive!
BTW: Should this thread not be moved to the Equipment newsgroup, at
worst,

1948 National Radio Co. catalog. 35 pages in like new condition.
Covers the HRO-7, NC-183, NC-57, NC-33, NC-2-40, NC-46, HFS, NC-108,
50 years old and not a mark on it! $35 shipped in US.
Also have a 1955 Allied Radio catalog:
Not in as perfect shape as above, but very nice. Cover has a crease and
the 30 pages are loose at the top. $28 shipped US.
Thanks, Craig

Keep in mind that sentimental value is going to push the prices of these upwards. I just got finished winning a bidding war for an S-38, and I paid a rather steep price for it, but I have been searching for one in particularly good condition for a couple of years now. It's worth it to me if this is the last time I have to go out looking for one, and it will probably hold its investment value (especially since I plan to keep it until I'm pushing up the daffodils). I had one years ago -- it was my first boatanchor -- and foolishly I sold it when I got my SX-71. I'm just trying to replace that piece in my collection, but I'm looking for one that more or less matches the condition of the one I had, and I don't really mind paying a little extra, if it ensures that I'm not going to end up getting stuck with one that disappoints me (as was the case for the last one I bought).

If you're going to get angry at anyone, it ought to be the dealers who hoard and attempt to control the supply of scarce hardware, and *really* drive up the prices to ridiculous heights (i.e. Collins, National HRO-500s, etc.). Something like this happened recently, where a guy had three HRO-500s, NIB, and was trying to get something like $2000.00 each for them, and it was clear from the getgo that it was a speculative venture on his part (why else would anyone claim ownership of three radios that supposedly had never even been taken out of their boxes?). And that wasn't even Ebay, where the prices were bid up... it was an ad posted here with an initial asking price.

Cross-posted to: att.ham-radio,rec.antiques.radio+phono,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

To ALL, In an earlier posting, I had expressed my dis-satisfaction with ONSALE's shipping charges. As a result of this posting, I immediately received very positive communication by e-mail, as well by as phone, from ONSALE's top management. Both of ONSALE's key people explained to me, that ONSALE has recently addressed the problem of excessive shipping charges in general and fully intents to correct my past problems as well. I can see, that they want to do right !

I like to share with you, that I have purchased from ONSALE since their inception and have always been extremely happy with their products and their services. I consider myself a regular customer of ONSALE. My one and only beef was their cost of shipping and it seems that this "problem" now has been resolved.

Why not check ONSALE at www.onsale.com for yourself and see if they have what you're looking for. I'm sure that you will like their prices and I can now personally give you the assurance you that they _WILL_ put in every effort to make you happy with your purchases.
Regards, Rene VE6WCA (dutch)

I think you're right, C.K., "sentimental value" and certainly condition
play a large role in the "going prices" for "boatanchors". Like yourself,
I've paid a "premium" for certain B.A.'s I've wanted, when they were in
truly outstanding condition. I view it similarly to buying a "classic
automobile"; the closer to original (new) condition it's in, the greater
it's value. A "classic" car from the 60's will bring "top dollar" if
it's in exceptional condition; one that's all beat up isn't likely to
command anything similar in price.

Then there are the "reasons" we want "boatanchors"...of which there
are almost as many reasons as there are "b.a. enthusiasts".
Depending upon the b.a., it's condition, and the reason(s) someone
wants one, prices can (and do) vary quite considerably. Supply and
demand are only one factor amongst many in determining selling prices.

A few weeks ago at a local hamfest (Gaithersburg, MD) I saw an
absolutely beautiful Johnson Ranger I transmitter for sale. It
truly appeared in every respect to be "brand-new", right out of
the original factory box! Speaking with the gentleman who was
selling it, I learned that he had done a total restoration of
the rig, including having new front-panel decals custom-made.
The paint job was fantastic; I could not tell it was not "original",
nor did anything else appear to be anything other than "original".
He was asking $600 for this beauty. A "fair price" for a classic
Ranger I...restored to "original condition" throughout? I don't know...
only know that as the hamfest wound down, the rig had not been sold.
By the way, if the guy who owned that Ranger I happens to be reading this,

please get in touch with me via e-mail; your restoration work is definitely
the finest I've seen anywhere! :)

From: cccacutts@mindspring.com
Message-ID: <6uhapsafl1@camel0.mindspring.com>
Source record: 98353

Since this subject seems to be a hot one here in this news group, here is a little more:

For those who have not heard, the Initial Public Offering of eBay was this past Thursday Sept 24. On the Nasdaq Market with the symbol of "EBAY" the initial price per share was $18. Today's close was 44 7/8.

Say what you will about them, pro or con, they sure have caught the eye of Wall Street this week. Today CBS MarketWatch had this to say:

"CBS MarketWatch asked people who have used eBay's service or that of a competitor to tell us what they thought of their experiences....Of the 83 e-mails received as of 4:00 p.m. Eastern, 65 of them included mostly positive feedback, 11 were considered neutral, while just seven were deemed negative."

You can read the full story at:

3158. Re: FS: WRL GLOBE PB-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-25 00:00:00 UTC
From: w6lac@webtv.net
Message-ID: <26738-360C31A5-10@newsd-152.iap.bryant.webtv.net>
Source record: 98354

The PB-1 added a buffer/driver stage to the Globe Scout 680.

Originally the scout ran straight thru on all bands but 6 meters; on six, it was necessary to double in the Final, not a good practice. With the PB-1 plugged into the place of the driver tube socket, the final ran straight thru on 50 MC, and the rig output power was approximately doubled.

It would be of value to a WRL-Globe collector, or BA fan who wanted to run a 680 on Six Meters.

Not to say your price is a tad high, but I have one in my junk box that would be available to anyone for free.

73,

Bob, w6lac

3167. Re: EBAY Postings... My Conclusion

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-25 00:00:00 UTC
From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <360C63FA.74B4@hamradio.org>
Source record: 98363

This thread - now concluded - has been a perfect example of the game of passing a message from person to person, and then seeing how it was finally received.

This thread started with a simple discussion of prices - not a criticism of eBay or the auction format. The statement that started it was an opinion that eBay prices should not be used as a standard for assessing the fair market value of equipment sold in a forum where the buyer sets a price and both buyer and seller are free to negotiate.

The prices on eBay are representative of what happens when people bid against each other to see who can pay the MOST for an item. This is a legitimate purpose and result of an auction. The prices in the open forum of the swap newsgroups, or flea market (free market) prices are arrived at by logical negotiation, not emotional bidding.

Let's just keep the two areas of pricing separate and acknowlege that eBay has a ligitimate place.

Why not just take a poll of the subscribers to this list and see where
folks stand on the issue of ebay or auction posting on the RRABA.
Perhaps it would bring some closure to the debate(s).
1. Yes to ebay listings on rraba
2. Yes but only with a ebay or FA in the header
3. No to ebay listings on rraba
4. No to any "for auction" listings of rraba
5. Could care less in any case

Bob

Sentimental value yes, investment value probably not. Unless your widow is lucky it's likely that no one she knows will want to buy it and it may end up in the trash like many do today. By the time you die, most of those who know or care about such things will be dead also....

Christopher A. King wrote in message <>Keep in mind that sentimental value is going to push the prices of

Most who replied indicated they had no problem with "for auction" ads appearing here, Bob; however, many also indicated that it would be useful to identify such ads with "FA" or "For Auction", in the message "Subject" line. As a few pointed out, this newsgroup isn't all that "busy" with boatanchor "traffic" that it would matter much whether "FA" ads are here or not. If they are "identified" as such in the subject line, it's quite simple to "bypass" any ads that are not of interest to anyone...as well as to "zero in" on those that are of interest.

The "silent majority" probably don't care much one way or the other; the "vocal majority" seem to prefer that ads be permitted, and also "identified" clearly in their "Subject" lines.

The response obtained to the question of a "moderated" newsgroup was almost overwhelmingly against such moderation. There were several who responded that they would like to see more discussion here of "boatanchor-related" matters (i.e., history, techniques of boatanchor restoration, etc.). Personally, I'd enjoy more discussion here of boatanchor-related matters...and, reading this newsgroup's charter and FAQ's, that's supposed to be "what it's all about".

Regardless of what direction the group adopts, I think what's most important to keep this newsgroup "alive and well" is for us all to "get along", keeping messages in the "friendly spirit" which this newsgroup was intended to have...and which most of us here seem to have little difficulty maintaining. For the very few who insist upon "flaming", or personally insulting others...we can only hope they will be ignored and go away! <g>

Best 73, and thanks to you and everyone else who contributed thoughtful ideas and suggestions. They can only serve to make this an even better place to enjoy and learn from!

>Hi, is DEOXIT that much better as a cleaner for removing oxidization, etc
>frm band switches, etc than your every day tuner/contact cleaner?

Yes, absolutely unbelievable how effective it is.
For volume controls, carbon comp and conductive plastic, use
an application of DeOxit to clean things, the MCL to "treat"
the control. Very smooth and quiet afterwards.
For wirewound controls, switches and plated PCB edge connectors
use DeOxit to clean them, then ProGold to treat them. Which, BTW,
works EXTREMELY well to fix that annoying intermittent contact
problem with cordless phones/charger contacts.

>If so, where would be the best source for some??

Caig Labs.

URL: http://www.caig.com

A good investment would be one of thier sampler kits. For about $25
you get three things and a good way of fixing a bunch of things in the
shop while finding out how well thier products work.

K-MS15 Mini-Spray Sampler Kit

D5MS-15 (DeoxIT), G5MS-15 (ProGold), MCL5MS-H15 (CaiLube MCL)

73 es GM from Jeff

Of course, those of us old enough to remember products that worked
and were removed from the market by the EPA, will remember Cramoline.

(Insert discliamer for the clue-impaired that states I'm not an agent of
the evil empire or Caig Laboratories shilling thier producs for a fee.)

It works quite well on tube pins and sockets as well. Great product!

I buy it from MCM Electronics. They do have it on sale every now and
then too.

Make sure you get the instructions. It is -NOT- plug and play.
You have to remove a tube and replace it with the PB-1 to use on
6 meters and you have to remove it to use anything else.
If you don't get the instructions I can make you a copy of mine.

They refunded a fair portion of the "overcharge", as well as a credit which I had been chasing for awhile. And as mentioned before, my ONLY beef was their shipping charges.

My earlier post showed me two things, ONSALE's top management reads DejaNews and they are willing to correct problems & make their customers happy. Now, if only UPS would do the same..... Rene VE6WCA (dutch)

Mike, k6stu

I didn't remember that the rig doubled on ten meters, but it sure worked great on 10 with a minimal antenna - mebee the sunspots helped!

I dug the gadget out of the junk box a few minutes ago amd, sadly, it has been canibalized. Like most stuff that old in a junk box, at some time past I needed a widget or gizmo, and amputated from the PB-1.

Very sorry...I didn't even remember that I had done that...I often blame stuff like that on my faithful companion, K9DOG, a Black Labrador.

If you have any use for the carcas (the PB-1, not the dog) I'll send it along at no charge.

Next time I offer a piece from my junkbox, I'll check first to see what kind of JUNK it is.

Let me know you wishes, and be sure to send the latest mailing address, ok?

Red faced,

Bob

Hi I have a PREMIERE METAL PRODUCTS Hammarlund SP-600 cabinet in Excellent Mechanical condition that I am taking offers on... it is the same cabinet as seen in the 50's QST ads for the SP-600JX rcvr... There are some scuff marks and some very light rusting and paint flaking inside the base... it comes with BOTH CHROME side Handles and the PREMIERE METAL PRODUCTS Finger Ring on top of the Case... EASILY restorable to NEW condition... it is housing a working AR88LF right now that I would also consider offers for... the AR88 Needs a GOOD Cleaning but is working and any mods are unknown as I have not yet removed it from the cabinet... If interested e-mail me with your offers... 73 de Jordan...

3218. FS:Transmitting and Other Tubes

FS:Transmitting and Other Tubes

I've accumulated some power and miniature transmitting and other tubes. All are new in original boxes unless noted. Here's the list:

(4) VT4-C/211, 1 new RCA, all others used GE. The used tubes have excellent large getters, with little or no sign of use, may even be new. The new tube is date coded as WW II vintage and in original packing and box. Note: These tubes are tested for filament continuity only, but are certainly good, and I'll stand behind them of course. New RCA - $175.00, used GE - $59.00 ea. (AES gets $165.00 for new)

(3) 4-125A/4D21, 2 are Eimac, one is a GE. All apppear new. I have no way to test them (I'm not a Ham), but I'll gladly return your money if you aren't satisfied. I also have one new socket for these tubes which I'll toss in. AES gets $124.70, my price is $69.00 ea.

(6) new 8068 GE beam pentode pass tubes, octal base w/plate cap, 6.3 volt heaters, 35 watt plate dissipation, all new in original boxes, AES wants $50.00, I'd like $29.00 ea.

(1) 2C39 GE JAN original box and packing, AES gets $77.80, my price $52.00

(13) new GL-2E24 RCA, GE $5.00 ea.

(3) 2E26 RCA $4.50 ea.

(2) new RCA 6146W/7212 $14.50 ea.

(1) new RCA 6146A $14.00

(3) new 807, 2 JAN GE/Hytron, 1 Westinghouse, original boxes, $11.00 ea.

(4) 807 RCA, 2 JAN @ $12.50 ea., 2 regular RCA @ $12.00 ea. All 4 for $45.00

(2) used 807, test near new, $6.00 ea.

(8) 12BY7/A RCA $10.00 ea.

(10) 12BY7/A mostly GE $7.50 ea.

(8) 5763 RCA power pentodes $7.50 ea.

(2) 5823 RCA gas triodes $15.00 ea.

(1)7061 GE beam power tube $2.00

(1) 7551 ECG beam power tube $4.50

(1) 7695 GE power tube $2.50

Many other tubes available, including a few sweep tubes. Shipping is free in the USA with a $50.00 purchase. Please e-mail me if you are interested. Thanks!

Hi Gary.
I haven't heard anything back from Bob.
Don't know if he received my email.
I went back to reread both yours and Bob's messages this morning only to find out that they both had been deleated from the list. If you still have your unit I'll probably wind up buying it from you. Also I don't have any documentation about this unit.
I am trying to find a original manual for the Globe Scout 680, the 755VFO and the Globe Chief Deluxe or atleast a copy of the VFO manual. I am trying also to find the screen modulator and the 0-300 Ma Meter for the Globe Chied Deluxe.
But for the listing which I didn't print out which had his telephone number I have no way of getting ahold of Bob. Unfortunately as I said both listings disappeared off boatanchors.
Thanks and please let me know if you still have the PB-1.
Mike.

3225. FS: Alpha PA-70V Vapor-Cooled Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-27 00:00:00 UTC
From: Paul Christensen <paulc@mediaone.net>
Message-ID: <uwfP1.3787$Xt4.20587359@news2.jacksonville.net>
Source record: 98171

Rare opportunity to purchase an original Alpha "Steamer" PA-70V Vapor-Cooled Amp in Very Excellent, extra nice condition. The amp is spotless inside and out. Full output using a single 3CV1500A7 triode with attached "water boiler." This amplifier takes distilled water for cooling and runs extremely quiet, using only a whisper fan for supplemental air convection past a passive radiator. I have two "steamer" amps and I am selling S/N 183. Factory's glitch protection and AG6K parasitic mods performed. Output circuit is extra rugged, using a Jennings vacuum variable capacitor for output tuning.

The entire plumbing system is new, using the most expensive Teflon components I could find from New Age Industries, Inc., which meet or exceed original mechanical and electrical specifications. The tube was recently checked out by John Cavanary at Econco and was put through hi-pot and emissions testing. All testing results were excellent.

Amp comes with original factory manual and power cord. I will ship in the original carton, but the carton remains my property and must be returned upon receipt of amp.

This amp is not inexpensive, but due to its excellent condition and relative scarcity, I am asking $3995 + shipping and insurance. If you have any questions, I will be more than happy to answer them.

I have for sale a Heathkit SB-101 5-band SSB transceiver 80-10 meters
Also have the HP-23A AC power supply and the SB-600 external matching
speaker.....
The overall condition is very good and would say an 8 out of 10....
The 4 rubber feet are missing and the rubber bands for tuning the preselector
need to be replaced.....
It receives well but need the rubber bands to tune the rig......So not sure if
the finals are 100%.....
Looking for $200 and (((PREFER))) not to ship it if possible......I can be
reached at (508)-821-2993

Folks,
Although I have worked on some BC348's in the past, I do not know much
about this rig. Can anyone answer a couple of questions?

1. Where were the BC 348's used?

2. What type of Ham mods were done to these rigs?

Thanks,

Marc

That's a beam transmitting tube, same as a 6146, except running on 12.6 volts.
"A" is a mobile-rated tube. If it was a "B", it was rated slightly lower in
miliamperes than the "A"'s, A=625mA, and the "B" at 562mA.
Keep 'em glowin,
Joe

I am selling a Collins MP-1 12V power supply for the KWM-2/2A, and a Collins 351-D-2 mobile mount for the KWM-2/2A. Both are in good condition. the sockets are very good on the mount, and it comes with the two cables. The power supply is also in good condition, and came out of service. I have not used the power supply, but it should be in good working condition. Price for both items is: $175., plus $10. for shipping.

Jon, K1VVC

That's not quite true. The first distress prosign coincided with
the general call: CQ. At the Berlin Conference of 1903 the need for
a distinct distress call was recognized, but one was not chosen.
The British Marconi Company ordered its ships and shore stations
to use CQD. Since Marconi has a strangle-hold on the state of wireless
communications, that call became the unofficial norm. At the 1906
international conference (again in Berlin) the delegates again discussed
the need for an international attention-getting distress call. The German
delegation suggested their SOE be used, but other delegates thought the
"E" could easily be lost in a crash of noise. After much debate, it
was agreed upon that ___
SOS
sent as the single character ..._____... with no spaces (that's what the
bar over the letters is supposed to indicate) should be the international
distress signal for code. At later conferences, a strict set of procedures
were created in regards to distress communications (including the Auto
Alarm signal of twelve 4-second dashes with 1-second spaces which would
activate bells and lights aboard any ship whose radio receiver copied it).

The QRR you refer to is an amateur-created signal from 1925; it was
used to indicate that there was a railroad emergency and all amateurs
should stand by to assist in handling railroad message traffic.

___
Today, SOS is the only Morse distress signal, on or off the ham bands.
Signals of lessor precidence include:
XXX XXX XXX DE ... to indicate one has an Urgent message to pass;
TTT TTT TTT DE ... to indicate one has a Safety message to pass;
CQ CQ CQ DE ... as our General Call.

How these signal were used in practice can be seen in the following
U.S. Coast Guard radio log for a one-hour period on 500 kHz (the
international calling/distress CW frequency).

monetary gain is to be made. Please notify me in advance.

500kc - Part 7: A Typical Night

This part differs from the previous in that what follows will be
an actual log of signals copied during a typical one hour. During
our training at Coast Guard Radioman School (Petaluma, CA) we
were advised to attempt to log *everything* we heard. Well, that
was an impossible task due to the volume of calls passing over
the seas nightly! (Keep in mind that only short calls were
permitted on 500 - as soon as contact was made one was to quickly
move to a working frequency). What you'll see in the following log
consists of only about 10-25% of the signals transmitted.

The log consisted of 3 columns: The actual signals copied,
the frequency, and the time. A slash: / was used to indicate a break
between two transmissions, *except* when it was actually sent over the
air to indicate two frequencies - you'll see ``454/440'' meaning ``you
send on 454 kc and I'll send on 440 kc'' (the -..-. is actually
sent). Ships had a choice of using 425, 454, 468, or 480 kc as
their working frequencies, while shore stations were only assigned one
working freq, usually near one of the above, so in order to
work duplex one of the above, which was closest to the shore's
freq, would be used by a ship.

Everything you see will be actual transmissions except:
1. When preceeded by OPNOTE (= operator's note)
2. The BEGIN or END SILENT PERIOD entry.
3. The NO SIGS entry (meaning no signals heard in last 5 min.)

Notice the generous use of `dit dit' (and us hams probably
thought *we* invented it!). In the log it is indicated by `EE'.

END SILENT PERIOD 500 0918Z

What you see above is a typical one hour period of evening Pacific
signals transcribed with, again, at most 25% of the transmissions logged.

You noticed the exchanges were short (with operators quickly moving
off 500 kHz to a working frequency) and informal with generous
use of pleasantries such as TU = thank you, TKS = thanks, SU = SEEU =
see you, OM = old man, GE = good evening and of course the ever present
`dit dit'.

Note the prosign VA is the ham's SK.

The 0900 entry was typical for the top of the hour - a dozen
CQ's being sent at once!

The idea of 500 kHz being an international calling *and* distress frequency
was finalized at the 1932 Madrid Radio Conference (see Schroeder 1964).
I find it a shame that amateurs never implemented the idea of a calling
frequency on each band which everyone would monitor, in which short
station-to-station calls and CQs could be made, with parties moving
to another frequency for the QSO. Two-meter repeaters come close to
this idea but operators fail to QSY off the repeater to try to work
simplex. Oh well - something about Old Dogs, New Tricks...

Have you ever used the product that inspired Deoxit - Cramolin? Caig used to distribute it before their license was yanked, then they came up with Deoxit as a replacement.

I still have two cans of Cramolin in my field kit. Amazing stuff. It was the only thing on the market at the time that really produced results without some rather nasty side effects. Most of the cleaners on the market at the time were very harsh on the plastics used in drum tuners, or the composites in many variable controls. Cramolin produced no such side effects. Further, many other cleaners create a need for themselves. Once used, their results are temporary, and they must be used again. Cramolin was the first cleaner I have used that does not create this "addiction". So very little of it went a very long way...which explains why I still have half of my second can of it, so long after it was removed from the market.

But then, quality is like that....you know?

The 2-150D is indeed a high voltage rectifier - PIV rating 30,000 volts at 0.25 amps. It was used in supplies developing 10 kV+, like for X-ray machines.

Filament requires 5.0 volts at 13.0 amps.

It has a listed plate disippation rating of 90 watts and requires a heat-radiating plate connector like the Eimac HR-6.

Hope this helps. Data from the 1967 Eimac "Power Grid Tubes - Quick Reference Catalog".

3258. HELP: Hickok 750 Tube Tester Servicing

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-27 00:00:00 UTC
From: nstlgiaair@aol.com
Message-ID: <19980927115758.09307.00004401@ng65.aol.com>
Source record: 98204

TIA ALL!

I recently aquired a Hickok Model 750 Tube Tester. It needs a bite of TLC. I could definately use a schematic if anyone has one.

On visual inspection I found the following problems:

1) Missing the thumbwheel/gear for turning the tube chart (chart is there).
2) The Grid and Plate cap jacks are both broken.
3) The #81 and #49 lamps used for fuses are both blown
4) There is a spool type wirewound resistor next to an 8MF 350WVDC cap that has corroded. There are two of them stacked together, the one corroded is thinner wire, and sits on top of the one closes to the circuit board. Looks like it corroded from the solder resin.
5) The meter seems sticky about 50% of the way up the scale (have not checked into this yet).

Thats it for the visual inspection problems. Minimally I need to know the value of that wirewound resistor, so I can attempt a replacement. If anyone has any of the parts that are missing/damaged from this set that would help too. It has two tubes in it, a 5Y3 and a type 80. Any service hints, suggestions or other help would be greatly appreciated.

Thanks again,

Richard

Hi Dale,

I've been using Cramolin for over 10 years, and I still have some left. BTW, maybe it's just me, but I don't find too much (if any) difference between DeOxit and Cramolin. It might be just that I haven't had the opprtunity to "torture test" the two products.

3284. FS or Trade: MINT Tempo One + PS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-27 00:00:00 UTC
From: KB4AEP <crslex@iglou.com>
Message-ID: <360E94B0.2BCE1A9B@iglou.com>
Source record: 98230

For Sale or Trade:
Absolutely MINT Yaesu Tempo One (FT-200) black-face with matching AC/One power supply/ speaker.
This gear looks like it was just pulled out of the box for this first time and works perfect on all bands. It is currently under dust covers.
Has all original tubes and original owners manual.
This model has the solid-state balanced modulator circuit. Covers 80-10 meter bands and has never been molested by a CB'er. I will throw in a new matched set of 6JS6C final tubes.
$250 plus shipping or trade for one of these radios:
(must be in really good shape and working fine)

Kenwood TS-520, TS-520S or SE
Yaesu FT-101, 101B, 101EX
Heathkit SB-104A + PS
or what do you have?

E-mail crslex@iglou.com

all the free web sites on the world are of no value if they do not get traffic.
For now, ebay auction is "The" on-line auction that gets the most traffic. It
therefore has the most radios and the best selection.

As for the price range, someone had a truck load of them at the Atlanta
Hamefest. They were all NOS sealed in the original boxes and was selling them
for $5 each. I know, I got one.....makes a great paperweight and looks cool
too.

You just hit the nail on the head with that one. Why would a seller want to put something on a site with less traffic...maybe to get lower bids? This is one of the main reasons that Wall Street is watching them. Human nature being what it is, they just about have their own monopoly. Strange, but this is also one of the reasons some people can't stand them.

I'll say. 12,000,000 hits PER DAY on eBay. It's worth a few $$$ for
the extra exposure. Don't knock eBay until you've tried it. I
profitted into the 5 digit range in1997 on eBay, paid off all my
credit cards and bought a cabin in northern Michigan with my eBay
profits.

3294. 5763 data needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-27 00:00:00 UTC
From: KC2WE@aol.COM
Message-ID: <454488af.360ebb70@aol.com>
Source record: 98240

The old RCA TT-5 tube manual only has partial info on many old tubes, including the 5763 and is not adequate. Does anyone have a full data sheet (one from a loose leaf binder set, as they had complete data)? I want to find out if there are any tube curves and / or data for AB1 or AB2 operation. That's what I 'm looking for.

Seth KC2WE

Message-ID: <360ED2C6.5060@ix.netcom.com>
Source record: 98252

For Sale:

Lewis/Peco 4E27 NOS. Have five. $20 per pair and
the first order gets the extra one free.

Pair of Eimac 4-65. Look new but I don't have the boxes
so I can't promise that. $25 for the pair

All plus shipping from 78728, of course.

If you are unhappy with these tubes, return them in
their original condition within 14 days for a full refund.
Electrical abuse and breakage excluded, of course.
All my tubes are marked for individual identification
to prevent confusion should they need to be returned.
Tube returns without the mark will not be honored.

Important note: RF Power Tubes tend to accumulate
a certain amount of gas when in long storage. Run
the filaments for 24 hours to drive off any
accumulated gas before operating them. If you
properly pre-burn the filament and any tube
remains gassy, I will cheerfully refund for it
if you return it to me.

In short, a sellers paradise, but buyers beware ;-)

I don't have a problem with Internet auctions, as long as folks
understand that, with a little time and savvy, they could find
the same stuff for the same stuff that YOU paid before
reselling on Ebay. Those things came from somewhere, right?

Buy cheap, and sell dear, is the old motto. In my case, though, it
goes more like buy cheap and keep.

Cheers.

Phil

4. No to any "for auction" listings of rraba

they are now a publicly traded corporation and can surely stand
on their own two feet and discourage their users from making these
pointer messages.

3316. FS/ Trade: Tempo One + PS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-27 00:00:00 UTC
From: KB4AEP <crslex@iglou.com>
Message-ID: <360EF234.FAD4F030@iglou.com>
Source record: 98262

Deal fell through so available again....

For Sale or Trade:
Absolutely MINT Yaesu Tempo One (FT-200) black-face with matching AC/One power supply/ speaker.
The transceiver looks like it was just pulled out of the box for this first time and works perfect on all bands. It has been well treated and kept covered. Upon closer inspection I noticed that the power supply is in really nice shape but has some scratches in the paint on the top (caused by antenna tuner?), but would be easy to fix as the Tempo gear has a "splatter" finish.
Has all original tubes and original owners manual.
This model has the solid-state balanced modulator circuit. Covers 80-10 meter bands and has never been molested by a CB'er. I will throw in a new matched set of 6JS6C final tubes.
$250 plus shipping or trade for one of these radios:
(must be in good shape and working fine)

Kenwood TS-520, TS-520S or SE
Yaesu FT-101, 101B, 101EX
Heathkit SB-104A + PS
or what do you have?

E-mail crslex@iglou.com

Hi,

What most everyone is implying is that there are no fairly priced radios and accessories, or even bargains, on E-Bay. I disagree. I purchased a number of items there that I see advertised at higher prices on the newsgroups. I don't have an extensive shack or a lot of money invested, but what I have is good and I feel I got it at good prices.

Oh, and I've had luck selling there too, but I usually look to get what I paid back out. I've "profitted" a little sometimes, but not much, and that's not the point. This is a hobby.

What I like about selling on E-Bay is the feedback system. It keeps a lot of the bad apples out.

Just my two drachmas...

73,
Cait

I go to Fry's because that is where I get the best price. I don't go for the service -- if that's what I wanted I'd go to CompUSA and pay retail (and probably still be disappointed). When I go to Fry's I know EXACTLY what I want because I'm not paying for help or expert advise. I'm not paying for generous return policies. I'm not copping a laserjet to print up 4 or 5 thousand flyers, and then returning the printer that next day claiming it doesn't work. Believe it or not a lot of smart-ass GenXers pull those stunts and guess who pays for it -- the customer.

You think the hired help is rude? Be rude back, they're used to it.

I always pay with a credit card. That way when *I* screw up and buy the wrong thing, or I need to return it because it doesn't work, they just issue a credit and I'm done. Or, I pay cash, that way of there is a return, they give me cash back. You gave them a check? What's wrong with them letting it clear before giving you a check back? Don't try paying with a check for totals over $350.00. That really stops the system up. Of course, I don't want to be paying higher prices to cover some deadbeat's bad checks, either. In a way they are protecting me, aren't they?

As for the toner cartridge, why the big whine? You can take the one you already installed and put it in the replacement printer. Leave them the sealed one. Do it at the store and test it so you know it works. Good idea?

You don't get Nordstrum's service at KMart. Stop expecting it. They must be doing something right -- look at all the customers. And the next time you see a price to good to pass up, you'll go for it. Just be prepared for the Fry's Experience.

Cheers,

TR

In defense of "dealers", I've bought many radios I would probably never have seen otherwise from "hobbiest/dealers" over the last 20 years. These guys spend a great deal of time and money digging these sets out of obscure and often nasty places----The extra cost we pay as collectors goes to compensate them for their time.
I've got many friends who make either full or part-time livings from the radio biz. Probably the best example in the business is Gary Schnider from Play Things of The Past in Cleveland. He has devoted the better part of 25 years to the radio business. He is the founder of Antique Radio Classified magazine--kept it going at a loss for years--- His store and catalog provide a great service to the collector community.
Please don't use the word DEALER as a perjoritive---True, some people will abuse any system, in any hobby---but MOST of the dealers are honest,hardworking guys providing a great service and sometimes making a living while doing it.
BTW--none of the guys I know in the biz are making enough to buy vacation
cabins in Michigan.

Yes. About 70% approval last time I noticed. About the same as Nixon's just before his impeachment hearings began. Odd isn't it? Yanks don't care about politics much, but they have an obesession for watching TV. They watch even when they don't like
whats on. When there is nothing else to watch they they will be screaming for his head if for no other reason, than to get his face off their TV. Sometime next Summer probably. Although I consider Clinton to be a BOATANCHOR around the neck of the public this will be my last post on the subject on this NG.

Sounds like Leroy's a bit miffed -- maybe he can't find an IC for one of his late-model radios. I bought a couple of Larry's S-meters and they're exactly as described, and it's hard to buy a new meter of any kind for that price.

Oh, and anybody who's ever soldered knows it's *not* something one does naked!

Using a credit card will help some in a situation like this. If they refuse the refund you can have the credit card company yank the money back. If you do get the refund the card is credited and the money is available right away to spend......

No one should ever have to apologize for making a profit. There is no gun at the head of someone bidding on an item on Ebay. I have spent many hours stopping at garage sales and chasing down ads only to come up with zilch. And did anyone ever find a $200 radio at a garage sale with a $5 sticker and offer to pay that person more than the asking price? I send scans of schematics to people on this NG for free when I feel so inclined, but when I want to sell an item Ebay is where you'll find me. I have a family and I'm not a charitable organization. If you really care about your fellow hobbyists, offer your knowledge and technical advice here and sell stuff somewhere else.

A quick guide to Eimac tube nomenclature...

4-250
^ ^
| |
A B A = number of tube elements
B = plate dissipation (watts)

A
2 diode
3 triode
4 tetrode
5 pentode
6 you could keep going with this....

Letters between A and B indicate tube type. In general, a dash means a glass envelope, X means external anode, C means ceramic envelope, N means conduction cooled, V means vapor cooled.

For numbers like 3B28, 4D21....

the letter indicates the number of tube elements

B diode
C triode
D tetrode
E pentode

I don't have any idea what the other numbers indicate.

FS: ETO Alpha 374 Linear Amplifier

This IS the three tube version with the hypersil transformer!

Many companies claim that their amps "loaf along at the legal limit"
With its three 8874s and that beautiful transformer, this amp literally
can.

The amp was lightly used and is in excellent condition. There is a
cosmetic problem, in that the top cover shows mars (not scratches) from
equipment that had been placed on top. (Alpha used a "suede finish",
soft paint on the top panel when this was made.) As this is a slide off
type panel, it could easily be stripped and re-painted.

While I would prefer a local buyer (I live in south central Wisconsin),
the transformer is removable for shipping and I could ship the amp.

$790 picked up here in Middleton Wisconsin or
$850 carefully packed in two boxes and shipped UPS ground in the
continental US.

For more info call (680) 836-7783

Thanks,
Dave, W2QA

> yeah...ok..i believe this...hahahahahahahahahaha....

You'd be surprised. There are people out there who have sold/bought
hundreds of items on eBay.

I've sold stuff on eBay for a lot more than I'd ever expect to get
selling at a ham fest or in the newsgroups. I set my starting bids very
low - and the final selling price is truly what the market will bear. I
don't set it, _they_ do! It's amazing what people will pay for some of
the stuff on there. God knows how many times I've been outbid for a few
items that I really wanted and was hoping to get cheap.

On top of that, the rating system on eBay that lets people know who are
honest and reliable is a great idea. You know who you're dealing with
before bidding.

From: cccacutts@mindspring.com
Message-ID: <6uoeq5$548$1@camel0.mindspring.com>
Source record: 98067

While tuning around the bands on my SP-600, I started to recall what I use to pickup on the HF band years ago. The Russian Woodpecker. The first time I heard it I thought my rig had a major problem. I also thought "Nothing can take up that much bandwidth." Boy was I wrong. Sometimes we dont know how good we got it now, until we recall the days of the Russian Woodpecker and how hard it was to work HF with that interference.

I am somewhat surprised at the number of Amateurs out there that do not recall the Russian Woodpecker. Most of the ones in this news group can remember it. My question is "When do you recall hearing the Russian Woodpecker for the first time?"

Hello, I have the following literature that is out of print,
and very hard to find. These are very high resolution LASER
monochromatic reprints of the rare originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices INCLUDE POSTAGE, in the
continental USA. Others by actual quote.
Thanks, and if you need tubes, visit our sister screename,
Tubecntral@aol.com

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2,069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"
price update for Dec. 6, 1946.Another excellently illustrated info
source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951
25 pages crammed full of information IN DEPTH! Has everything you
ever wanted or needed to know about running these tubes, a real

nicely illustrated easy to understand manual, Price 10.00
Thanks for reading, if you have any questions or need to order,

I was working in Germany from 1981 to 1984 and operated as
DA2EU. You have no idea how bad the Russian Woodpecker is,
or was, until you are up close and personal with it. I operated
40 and 15 Meter CW mostly and when it came on it felt like
someone drove a spike through your head. I usually used head
phones. There was no AGC that could soften the blow, either.

It really didn't take up that much bandwidth. The Russian
Woodpecker, I believe was a swept low frequency radar.

Welcome to the "Fry's experience". You quickly learn that anything on sale is a discontinued item that they bought by the palette full (including disk drives). These items are discontinued because they are obsolete or because they don't work (or both). Compare the prices of first run, current merchandise at any discount house or computer store with those for the exact same item at Fry's. Fry's is usually the same or 10% higher. The only "deals" at Fry's are on junk.

Every seasoned Fry's shopper knows to first look at the pile of any particular item. If more than 20 percent are returns (as indicated by the "Quality" sticker) then the item is junk. I have witnessed a Fry's employee take an item that I returned, slap a "Quality" sticker one it, shrink wrap it, and place it the restock bin. I informed the Returns manager that the item was defective and he simply shrugged and told me to get my refund and leave.

Trying to restore an old Eico 722 3 band novice transmitter and I need one knob. This knob was a one of a kind used only on the Eico 722 transmitter, 723 VFO or 772 CB rig. Want just the knob but willing the to buy a dead unit to get one.

..and no,.. Eico test equipment used different knobs... that would have been just too logical to use the sames knobs on the whole product line...

If you can help, email me - Thanks WD0HCO

Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.radio.swap

I have met a great many radio amateurs who are also professionals.

It seems very rare for any individual to operate hard and fast rules about whether or not to make money (and/or profit) from his hobby.

I know some dealers who don't like radio amateurs, beleiving them to be always on the lookout for cheap or free substitutes for spending money.

I see no objection to using one's technical knowledge to substitute some valve (tube) which someone was about to throw out (often a valve from an old TV) when the usual valve's price has been driven sky-high by people who believe what they read in glossy hi-fi magazines.

I stopped giving free advice and doing free repairs, as a radio amateur, when I started having to pay a few hundred pounds a year to insure against being sued for anything I did going wrong later.....a hard lesson learnt long ago when I thought I was doing a favour bringing TV to a local hotel.

I think most radio amateurs would still help in an emergency; but nowadays all the emergency services (in the UK anyway) are getting wary of being used as a free nationalised taxi service.

Most people think carefully before giving away goods or knowledge free of charge; after all someone else probably tries to make a living doing the same thing.

Swapping goods and favours seems OK to me, especially when both parties go away happy.

Likewise most auctions seem OK to me - happy buyer, happy seller, happy "facilitator" with the commission. I am very wary of commission-less setups; I suspect goodwill and lack of experience have got together to create something which cannot go on for long.

Where's my asbestos jacket now?

Message-ID: <36120836.11995087@news.i-2000.com>
Source record: 98083

FS I have a pair of traps from a B&W model 370-12 multi-band antenna kit..The kit allows operation on 10-15-20--40--& 80 Meters with these coils, and a total antenna length of approx 110 feet...The kit orginally came with a center connector,insulators, coax, wire, and an PL-259 connector..These parts are very easily obtained from the average junk box, and once together make an nice multi-band antenna. The coils appear new, with no signs of weathering at all..$30.00 for the pair + shp....Bob K2LGO Pse remove the (ns) from my address....

3364. 575A rectifiers FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-28 00:00:00 UTC
From: napoli@i-2000.com
Message-ID: <361b0a98.12605138@news.i-2000.com>
Source record: 98084

I have two 575A rectifiers Sylvania, that came from a defunct AM
station I was helping clean out--they are obviously new, with the
original packing and the original boxes..they we're spares for the
stations Collins 20V2(long sold)...The only problem with these tubes
is that the glass envelope, and the metal bases have come apart. It
is obvious both visually, and with an ohmeter that the filaments are
intact, and that the base and envelope have to be glued, with whatever
kind of magic glue that's used for such things.
I GUARANTEE these tubes to be as represented, or I'll gladly refund
your purchase price...I'll even throw in an additional pair of 575A,
which we're obviously pulls from the 20V2..don't know anything about
there condition....$50.00 + shp Bob K2LGO
Pse remove the (ns) from my adr Thanks.....

You're right, of course. I bitched for a little while about Ebay, until I noticed that there really were a lot of nice radios there (along with many, many dogs!). So let's see, which makes more sense: 1) Driving 700 miles to a meet where the flea market starts at 4:30AM, and find few quality, clean radios, or, 2) Shop for the radios on Ebay and pay more, but not as much as I'd have paid in expenses to get to the meet.

There's another aspect to this that I haven't seen mentioned. When the lying S.O.B. at the radio meet sold me the radio that he swore worked just great, only to find out later that there were major problems, parts missing, etc., I didn't even know his name, let alone how to find him. Do you suppose he'd have gladly returned my money?? Recently I purchased an item from a fellow on Ebay and watched it go up in smoke (literally) when I turned it on. I shot off an email to him telling him what had happened and ask him if he could help me out. His immediate reply: "I will return your check and YOU keep the remains. Maybe you can use it for something. " The reason he handled it that way was that people REALLY ARE making the kind of money you mention and they don't want to risk any negative feedbacks on Ebay.

Personally, I elected to go with the flow and to clean out my closet of electronic junk that I'd have otherwise thrown away someday. Know what? People are BUYING IT on Ebay. I think the $2 billion probably ignores the "receivables" outstanding from open auctions on the site. With 700,000+ items currently for sale, fees of just $3 per sale exceed $2 billion. Ain't capitalism great!

that
>shops there is a crook?

That's how they keep the prices down. Cheap labor and extensive control
over payments. If they treat you like a crook, don't take it personally.
It's just another way to keep the prices down. If they hire comptetent
help, and loosen up on their policies it results in -- you guessed it --
higher prices.

>You shouldn't be penalized if you pay with a check, no matter how large the
>total

You aren't penalized, the prices are the same. For a large check, they
don't want to get burned and have to pass the loss off as -- you guessed
it -- higher prices.

>Fry's doesn't seem to have heard of on-line check verification.

They have heard of it, they just don't want to pay for it (it ain't free)
because paying for it would result in -- you guessed it -- higher prices.

>Calling the bank to verify checks went out of most stores' practice years
ago.
>Fry's policies and procedures are the most inane and most
>customer-unfriendly of any major store in the US.

They sure have low prices, though, don't they? They could fix all that for
you but it would result in -- you guessed it -- higher prices. They don't
need to do it for me because I like -- you guessed it -- lower prices.

>Just why, also, do they insist on subjecting you to an inspection as you
leave
>the store? Again, assuming everyone's dishonest is the only reason that
makes
>sense.

Think about it Joe. That's not becaues they distrust you -- it's because
they distrust their own low cost employees.

>Low prices don't have to be 'paid for' in this way -- as Sam Walton
would've
>been able to demonstrate.

Oh, yea, Sam Walton -- financed with Industrial Development Bonds (read this as taxpayer dollars) and stocked with shoddy goods produced in overseas sweatshops.

>I recently moved out of the SF Bay Area and Fry's
>is *not* one of the things I miss.
>
>Joe KC6TXU

My best regards, Joe, I just think you took their cost control personally. I never did.

Hi

I have been asked by a visually impared ham for help hooking up
his Talking Digital Dial. Trouble is, I know nothing about it, and
info for it is very limited. Is there anybody out there that can give
us some advice ? It's a TDD-2B, and he wants to connect it to
a Heathkit HW-12 (?) single band transceiver.

I am wondering about power levels that the thing can tolerate
as well as where the heck would one pick off the necessary
frequency and power level to make the thing work. I understand
that it was hooked up and working on an FT-77, but it had a
plug on the back to accomodate this unit.

Any help would sure be appreciated.

Regards
Reed

Had a similar experience with them recently myself. Bought a scanner (good price!) but had to send in a "rebate" form. The one in the package was unreadable. When I called to get the address to send the form to, I ran into a brick wall. One guy actually told me after they have their $$$'s any problem is the customers problem!

Finally got the info, but it probably cost me $12 or so in phone calls.... My "good price" wasn't so good after all. At least the scanner works!

Steve

But their policies sometimes make it Fun to shop at Frys!

I once saw one of their computor department employees go into a "Full lockup condition" and almost melt down on the spot. I didn't realize that this employee was already doing something for another customer. I asked him if he could find something for me. He stopped... looked at me... opened his mouth and moved it a little (no sounds came out)... he then turned and looked at a woman nearby, still moving his mouth (and still no sounds coming out). He then proceeded to look at me then her then me etc. All the while moving his mouth with no sounds coming out. After a little bit (quite a bit actually) I realized he must be 'helping' her so I said. "If you are already helping someone else, nevermind, I will get someone else to help me." At that point he looked very relieved and went on his way to presumably help her. I'm not sure how long he would have stood there if I hadn't said anything, but I think he would still be there now. You could almost see him melting down, completely unable to resolve the issue, probably thinking, "I'm helping her, He wants help, may boss said to help everyone, what do I do" (repeat endlessly).

I still laugh pretty hard any time I think about it. I've never seen a person look that confused. Thanks for reminding me.

By the way, I agree with several of the responces I've read. Frys is great as long as you know what to expect and you don't take things personally. And don't let them give you any cr*p when you return things. They'll take it back and just put it back on the shelf. (For that reason you should always check to see if what you are buying looks like it may have been repackaged.)

Source record: 98095

I swore I wasn't going to get into any more
of this, but folks, this is just tooo good
not to share..

You're just going to have to beat me and whip me
for being bad, because it's time to
"set the record straight," to coin a phrase.

You know the fellow who keeps complaining about Ebay?
I won't mention his last name but his initials are Tim M.,
amfone@concentric.net
among many other alias email accounts.

Well... here's why he hates Ebay so much--

Click on this link to go to the Ebay search page:

http://pages.ebay.com/aw/search.html

scroll down to "BIDDER SEARCH" and enter

amfone@concentric.net

in the search field. Be sure to
click the "YES" box on "completed auctions."

He's been in there bidding with both hands.
He's p.o.ed because none of his low-ball bids won anything.

Thanks to the Mystery Hacker who tipped me off
to this little game.

Don't make it worse by making excuses to the public, Tim.
They can be very intolerent of someone being ungracious.
Your best move is to either admit error or be silent.

The world isn't against you, Tim.
You behave badly towards others and this
is the natural consequence. Change your behaviour
and you might find the world a friendlier place.
You weren't born to be the goat, you know.
You put youself there,
and you can take youself back out again.
The choice is yours, as it always was.

Regards,
Dave Stinson AB5S

Hello, Allen ....

The first time I can recall hearing the "Woodpecker" was 1959. We now have what is known as "High Frequency Active Auroral Research Project (HAARP)" to contend with. As a former U.S Navy Radioman/Communications Technician sitting long hours at watch on the HF frequencies working military CW nets, the "Woodpecker" was quick to induce many headaches. The signal from the "Woodpecker" was strongest when we were on reconnaissance in the Barents Sea and the Kara Sea..

Hope this answers some of your question.

From: Bob Miller <bmiller@calweb.com>
Message-ID: <36105351.F05C76F@calweb.com>
Source record: 98099

For Sale: Tired of tripping over this fine machine. bought it New In the Box about 8 years ago and take it out from time to time and power it up. The trace is bright enough to blind you and the condition is near perfect with original box and manual. Only missing the original power cord but supplied with a new non tek unit (probably safer anyway). Front panel is indeed near perfect. Some dust but no grunge. The plug in (a 1A1) is not new, but in nice condition. If you are putting together a show piece boat anchor shop, this is the unit for you (hard sell heh!)
The price is a bit above the norm for a 15-20 Mhz scope of its age, but I think it will please the fan of elegant and classic Tektronix gear. $150 plus UPS from zip 95827. Includes the 1A1 plug in, the original box and original manual.
Thank you for the read.

Bill, why not just offer it for sale here. We can recognize a good value when we see it.

eBay seems to be popular enough that maybe we should just shut this newsgroup down. What do ya think Bill?

I have some interest in this radio, especially with the converter but wont go do battle on eBay. Sorry.

Yes, they are rude and the management don't care about it because they hire lowest paid employee! Ask rude guy how much he makes, you will be surprised. Most of them make near minimum wage. I have been to many stores but the worst one is the Palo Alto store. One time I waited 30 minutes to get the refund and I complained, I asked the manager, instead they sent a security guard and threatened me whether I will get the refund or thrown out from the store. Bad,rude people,it is almost like Bill Clinton, you don't lik it but many people keep going there.

Gentlemen,

I picked up an National NC-105 this week. It works poorly......and.....the S-meter looks like it got quite hot and then ....somebody took all of the circuitry...or at least majority.....for the S-meter.

I would like to restore the set. I have wanted one of these since my Novice days. Can anyone help? After I get it all fixed up it will be teamed up to my Navigator and will be on the air.

Thanks!
Chris KX0Y

Are you a "dealer", operating a business for profit? The tone of
your message suggests otherwise. And are you saying you "profitted
into the 5 digit range in 1997 on eBay" selling items to hobbyists
such as those of us here...profitting from fellow hobbyists?

As a radio hobbyist, I've done quite a bit of buying, as well selling
of "boatanchors" during the past several years. When I buy, I pay
what I feel a "fair and reasonable" price for the radios I buy;
when selling, I sell for what I, and the buyer, feel to be a "fair
and reasonable" price for the radios I've sold. I'm not a dealer,
and do not make my living from my hobbies...I simply enjoy them as
hobbies. As such, I feel no need nor desire to "profit" from those
I sell radios to. I'd rather "swap boatanchors" than buy and sell,
anytime. I've been treated very fairly by those who I've bought from,
and do my best to treat those who buy from me with this same fairness.
I've never found it necessary (or desirable) to buy any of my "ba's"
from a "dealer", just as I've never found it necessary or desirable)
to buy any of my U.S. collectible coins from a coin dealer.

I do not know if you are a "dealer" or not, and I won't "congratulate"
you on your having made a "5 digit profit on eBay in 1997". For that,
to me, is NOT what this hobby (or any hobby) is all about. That may
be what "business" is all about...but wishing to continue enjoying this
hobby, and sharing the enjoyment of the hobby with others who share such
similar interests, is "what it's all about", in my opinion. Obviously,
we differ in opinions....but I'll be darned if I'll ever buy anything
from you, as I feel what you're doing is destructive to the continued
affordability and enjoyment of this hobby for many who would like to do
so. And I'd encourage other hobbyists to consider whether they wish to
maintain "boatanchors" as a hobby, or whether they'd rather help you to
"pay off all your credit cards, and buy a cabin in Michigan" with their
hobby money becoming your profit!

I don't mean to "offend" you personally by these remarks, but do hope
others will consider whether such "profitting" really is what this
(or any other) hobby is all about (or should be all about)?

That 75A4 with matching speaker and 3 filters should be worth $800 or so--but you could probably ask more.

I find that Fry's return policy is pretty good. Always used a credit card.
I don't get too much grief when returning something, just say "it doesn't
work", and they toss it in a reject bin (and probably destined back to the
sales floor! (I never buy "customer return, full warrenty guarentee" stuff)).
They claim they test this stuff, but I doubt they go to that much trouble.

Fry's: The store everyone hates, but always they shop there anyway.....

I've been using eBay as a source of old radio _pictures_ and I've been collecting lots of pictures. a thousand pictures fit easily on a CD-R ROM disk. Especially when considering most consumer AM "AA5" tube radios have roughly the same performance, you don't need to "own" them to see them.

<snip>

Yeah, but why should anyone have to pay for the "best price" with rude, incompetent salespeople and store policies that seem to assume everyone that shops there is a crook?

You shouldn't be penalized if you pay with a check, no matter how large the total -- Fry's doesn't seem to have heard of on-line check verification. Calling the bank to verify checks went out of most stores' practice years ago. Fry's policies and procedures are the most inane and most customer-unfriendly of any major store in the US.

Just why, also, do they insist on subjecting you to an inspection as you leave the store? Again, assuming everyone's dishonest is the only reason that makes sense.

Low prices don't have to be 'paid for' in this way -- as Sam Walton would've been able to demonstrate. I recently moved out of the SF Bay Area and Fry's is *not* one of the things I miss.

Again you people are just plain clueless. Does the fact the eBay's net worth is now 2 BILLION dollars mean anything ? And yes I DID make enough profit to make a down payment on a cabin and pay off $3,800 in credit card bills. Go ahead, keep on bitchin' and whinin'. I'll just keep makin' the money. Check the NYSE for eBay and if your smart you'll be some stock in it. Read this story...

>>In 1995 (only 3 years ago mind you) Pierre Omidyar, the guy who started eBay, was working at a salaried job at Microsoft. His girlfriend
collected Pez dispensers and made the remark to him that it would be cool if there was something like a "garage sale" on the Net for people to buy and sell.

Well, Pierre had a personal web site that was primarily
devoted to informing people about the Eboli virus. Just as a whim, he added a little page to his personal web site that he called Auction Web to allow buyers and sellers to conduct auctions with each other. This little effort became a business called eBay and and two days ago (remember in only it's third year) became worth about 2 billion dollars.

While the public was offered 3.5 million shares, Pierre personally retained 12 million shares and Thursday his personal wealth became 600 million dollars. It gets crazier.

A year ago Pierre needed money to put into eBay so it could keep up with the explosive growth. He sold 22% of the company to a venture capitalist outfit for 5 million dollars. Their
5 million dollar investment
became worth 400 million dollars on Thursday (only
1 year later). That's an 8000% return on investment in one year.

When they put up the five million, they insisted that Pierre bring in a professional manager to run the company. They did a search and found a young woman name Margaret Whitman who was in charge of (get this) the
Mr. Potato Head division of Hasbro toys. They offered her the job but she refused because she did not want to relocate from Massachusetts to California. But they kept working on her and finally she agreed after they offered her part ownership in the company. On Thursday (again only one year later) her stock in eBay became worth 100 million dollars. And she didn't even want the job!<<

Doesn't matter if YOU believe it or not, it's the honest to god truth.
Go look up my last 2 months activity on eBay. You idiots don't have a
clue. All you do is sit here and slam Bay because the prices are too
high. DUH !!! That should make you think "hey, maybe I could sell some
stuff there". Quit being such chumps...

> you well mr scammer.

I normally don't care to respond to a post such as this, but please explain, just who did he spam and who did he cheat? Are you suggesting that he misrepresented the item and that the person who bought the item was either stupid or duped by the seller and did not know what he was purchasing?

I looked for some time for one of those tv signal boosters from the 1950's to go with my 1950 GE TV. Found a Philco TB-3 on ebay in perfect condition and got it for $10 plus shipping. Guess I got spammed and cheated. Also wanted one of those early UHV - VHF tuners. Found one that works great for $9 including the shipping. Got spammed and cheated again, darn!! I have purchased other items too, and only once did I think the seller misrepresent the item somewhat, and if I happen to pay more than what an item might be considered worth, guess what, as long as it was properly represented, that's my fault.
Yes, there are those on ebay who attempt use the system to pull scams, and some sellers are a bit overzealous in their use of 'collectable, rare, valuable, ect.', but they are a pretty small percentage.
And to anyone who thinks an item is going for an outragous price, I would suggest you don't bid, and don't call the seller a cheat just because someone is willing to pay more than you are.

Some people need a reality check now and then.

>Well Clint...I thought an agreement is when "two parties" have a mutual
>understanding??? What Fry's is doing is trying to force their policy on
>the public. There is no agreement, no contract.

And none is needed for a company policy to exist. All that is needed for
said policies to be legally enforcible is that they are published and
readily available to the public upon request.

>Infact Fry's hides their policy on the back of the receipts so you don't
see it until >you have paid for the item.

And also posts it via signage at each register and on the back wall behind
the checkout area. They will even advise you of their policy verbally, if
you bother to inquire.

>"you" may choose to allow Fry's to dictate their policy to you.... That's
ignorance!

Every business establishes their own policies and procedures of operation.
Even retail operations. They cannot "dictate" anything to the customer, only
inform them. Ultimately it is the customer who decides whether or not they
wish to do business with the company. All companies know their published
policies very well. If the customer chooses to ignore them, who then is the
ignorant one ?

Personally, I have no use for Fryes. Most of what the various posts state
regarding their business practices and personnel are true. *But* they are up
front about it, and it is common knowledge that it is "Let the buyer beware"
when dealing with them.

Posted for Jim -- REPLY TO JIM -- marijimc@juno.com

For Sale: Heath stuff.

1. SB-300/SB-401 with SBA-300-3 and SBA-300-4 2m and 6m convertors, manuals on all, $350 if picked up in Fordland, MO or $400 if shipped.
2. SB-104, SB-104A, SB-614 Monitor, SB-644 VFO, manuals on all, $500 if picked up in Fordland, MO, $550 if shipped.

Other items he may be willing to sell, should interest be expressed, include a Yaesu FT-707, Icom IC-720, Kenwood TS-520S (as new), and Heath SB-102. (Jim buys and refurbishes these rigs for fun, so you will be getting a reliable rig for very reasonable money.) Some of these look like they just came out of the factory box and others are used - just not abused!

PLEASE! Enough griping, whining, and complaining about eBay!
If you don't like eBay, then don't visit them. If you don't
like posts about gear for auction on eBay, don't read them!
There are more posts complaining about eBay than there are
pointing us to it! The more people complain, the more jump
in with their responses. Arguments ensue, and the newsgroups
get even further clogged up!

Wanna help the problem? Ignore eBay if you don't like it!

3426. FS: Complete Kenwood TS-830S station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-29 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <3610DDB1.6F28@vbe.com>
Source record: 97997

For sale: All in excellent condition. Rig just back from International Radio last month and was checked out and given an "optimized alignment". Want to sell as a complete station, postal money order or cash, prefer pick-up so you can see it work or you pay shipping. Asking $1,250.00 for all - condition warrants price.

TS-830S - Gold Letters, new driver and finals, full output, full filters - 500 Hz in each IF and 2.4 SSB, optional KB-1 tuning knob, excellent condition.

VFO-230 - Matching digital VFO with 5 memories, excellent condition, with connection cable

AT-230 - Matching antenna tuner/meter, excellent condition

SP-230 - Matching speaker with filters, excellent condition

SM-220 - Matching station monitor with BS-8 pan adapter (band scope), all cables inc.

MC-50 - Matching microphone, very good condition

Autek QF1-A - Audio Filter/Notch, very good condition, poor man's DSP <grin>

Pair of new matched RCA 6146B finals, One set used but good finals, two new 12BY7A drivers, other misc stuff included such as original and a copy (2 each) of operators manual and service manual, Heil connector for mike and PTT. This rig works great and has what has been acknowledged as one of the "hottest" receivers ever built. My first rig and very well cared for - I was second owner and it has never been in smokey environment.
Interested parties please email or call me at (920)582-8638 after 5pm CST.

> Anyone seen an announcment for Belton?
> I'm told it's this weekend but ???

Gee, Dave, you live in Austin (Texas, not Minnesota) so you should be listening to the Swap Net on Sunday nights on 146.94 at 9 p.m. local time. Belton has been on the Net since mid-August.

And you should know that Jeff N5MNW provides a weekly email of the Swap Net haves/wants and swapfest announcements. If you can't hear 34/94, I know for a fact you can receive email!

Yes, Belton is this Saturday (October 3) beginning sometime before dawn. Last year the dealing started at 5:45 a.m. in the parking lot under the lights.

For those of you who still need more info....the Belton (Texas) swapfest is this Saturday, October 3, 1998, in the morning at the Heart of Texas arena just south of Belton and just off IH-35. If you're coming from the north on IH-35 (Dallas, Waco, or Austin Minnesota), take the exit _AFTER_ the U.S. 190/Ft. Hood exit and go west. There are signs for the arena. If you're coming from the south on IH-35 (Austin Texas, San Antonio, or Mexico D.F.)it's the second exit before U.S. 190. It's marked for the arena, and if you miss it, take the Diamond Shamrock exit, buy a coffee, and loop back.

Happy hunting -- I can't make it this year, so you get the goodies I won't find.

Check with your Bank.. debit cards do not have the protection
that a credit card has, at least in Florida. This came up last week
when I told my bank that I wanted a debit card. Go for the credit
card, and pay monthly. Did you know what credit card companys
call people who pay their bill every month. Deadbeats.

I see nothing wrong with your premise. you are selling knowledge- the most important and expensive product in the world. you help others by enabling then to not have to wait years to gain what you spent years gaining. I pay a doctor good money so that I can get the benefits now rather than after my going to med school first in order to treat my flu.

<maestro@cix.co.uk> wrote in message
6uosmp$n0f$5@plutonium.compulink.co.uk...
|
|I have met a great many radio amateurs who are also professionals.
|
|It seems very rare for any individual to operate hard and fast rules
|about whether or not to make money (and/or profit) from his hobby.
|
|I know some dealers who don't like radio amateurs, beleiving them to be
|always on the lookout for cheap or free substitutes for spending money.
|
|I see no objection to using one's technical knowledge to substitute some
|valve (tube) which someone was about to throw out (often a valve from an
|old TV) when the usual valve's price has been driven sky-high by people
|who believe what they read in glossy hi-fi magazines.
|
|I stopped giving free advice and doing free repairs, as a radio amateur,
|when I started having to pay a few hundred pounds a year to insure
|against being sued for anything I did going wrong later.....a hard
|lesson learnt long ago when I thought I was doing a favour bringing TV
|to a local hotel.
|
|I think most radio amateurs would still help in an emergency; but
|nowadays all the emergency services (in the UK anyway) are getting wary
|of being used as a free nationalised taxi service.
|
|Most people think carefully before giving away goods or knowledge free
|of charge; after all someone else probably tries to make a living doing
|the same thing.
|
|Swapping goods and favours seems OK to me, especially when both parties
|go away happy.
|
|Likewise most auctions seem OK to me - happy buyer, happy seller, happy
|"facilitator" with the commission. I am very wary of commission-less
|setups; I suspect goodwill and lack of experience have got together to
|create something which cannot go on for long.

|
|Where's my asbestos jacket now?

Message-ID: <3610F5E9.17E0@ix.netcom.com>
Source record: 98010

I have asked Tim not once, but three times publicly
and twice privately to drop this matter and take
it to private email. He came right back and implied
I was a swindler yet again. No person with one
ounce of backbone is going to stand for that.

Also, I am utterly amazed and astounded that I
somehow have magical powers over a few people here
and can force them to point their mouse at
clearly marked posts that they claim they don't like.

I conjure evil spirits that force them to go "click!"
Then I call-forth a voodoo whammy to compel
them to read that awful post, thus "spoiling their fun."

Gosh... I must be one powerful dude if I can force
people to do that from hundreds of miles away, huh??

Clearly, this is nonsense- People making choices
and then attempting to shift the blame for them
to someone else.
Don't blame me if you continually choose
to make yourself upset.

Let me make this clear once more.
I'm asking Tim and his fan club,
if they choose to continue to slander and defame,
to take it to private email.

I am perfectly happy to drop this matter.
Here. Now.

Just DON'T REPLY PUBLICLY and it will all be over.

If you reply publicly, you're choosing to be upset.
If you *read* the replies, you're choosing to be upset.
Don't blame it on me, the weather, your wife or your pet dog.
You are not my puppet. I don't control you,
so don't blame me for your choices.
If you want to cuss at me, do it in email.
I've had mine chewed on by experts so
you ain't getting a cherry.

Sincerely,
Dave Stinson AB5S

Source record: 98011

Well, I would not let the pair go for less than $300. If it's the matching (S-200) speaker, that alone might sell for as much as $100. There are fewer speakers than radios at this point. I have a nice HQ-180AC and can't imagine selling it for less than $200. (Not that I would sell it, anyway -- I'm a collector, not a dealer.)

I don't hang around hamfests a whole lot, so this is just my personal opinion. Others may have other ideas . . .

I recently found a stash of 40 ARC-4 xtals.
If you need some, please contact me.
I'll pass them out for return postage.
People with ARC-4s get first dibs for two each.
Folks overseas who own ARC-4s get priority.
It's a lot harder for them to find parts.

If I get more then 20 replies, I'll
hold my usual lottery to see who gets them.
People who collect crystals can also get one
if any are left... probably will be.

73 DE Dave Stinson AB5S
arc5@ix.netcom.com

p.s. Yes, even if you've cussed me.
I forgive anyone who owns an ARC-4 ;-).

During the 70's, the "woodpecker's" QRM would "sweep" across the low bands,
at times quite disruptive to communications. As I recall it was reportedly
caused by a Soviet "over the horizon radar" system.

Can't find much information about this in searching the WWW for info...
does anyone know anything more about the "woodpecker", or perhaps where
more info about it might be found?

I have had great experiences with eBay. I have bought a couple things
which turned out to be junk, but that was my own fault and noone elses.

In fact, I bought a Telephone Interconnect at a hamfest for $30.00 and was
able to get $122.50 for it by auctioning it off at eBay. If you can find
good deals on equipment and decide to sell it, I would recommend selling it
on eBay. You stand an excellent chance of getting more than you paid on most
items. I am not saying you'll make
a 300% profit on everything, but any profit would be better than setting a
price and selling it to the first buyer elsewhere.

I have some of those old 73 magazines from the days when it was
as fat as a small town's phone book.
In 1982 I converted a Lafayette 23ch SSB radio into a 10 meter rig
with a crystal kit from International. It worked great, I used to
drive around in my car talking to Australia on a Big Stick
antenna. Unfortunately, those were the days when it was felt that
the 10 meter band needed a half a Megahertz of CW-only space,
so my converted rig didn't go lower than 28.5 Mhz. I traded it
away for two surplus portable 225-325Mhz AM transceivers with
quick heat filaments on the transmit tubes. I still have these,
but I sometimes wonder who has the Lafayette rig now...

I've had good and bad experiences with Ebay, I still check it out from time to
time . . but it is sad at the inflated prices some things are going for. At
this rate our boatanchors and antique radios are going to become
RARE!! COLLECTIBLE!! playthings of those who have lots of money to throw
at 'em.

For me, when I sell a piece of gear, I'm not so much interested in making a
profit (isn't that what I get up and go to work for??) than getting at least
what I paid for it (if possible) and, most importantly, getting it to someone
who's a hobbyist and who cares about getting a nice radio. I don't think
"setting a price and selling it to the first buyer elsewhere" is so bad -- but
then, I'm not in radio as a super-duper money-makin' operation.

Collins 75A-4 S/N 3473 w/ vernier tuning knob. 2.1kc, 3.1kc and 6.0kc mechanical filters installed (available separately). Best offer over $1400.

Collins KWS-1 S/N 998. Best offer over $1600.

Because this equipment is an estate asset, it is believed but not guaranteed to be in working condition. Physical condition is excellent although there are minor scratches on the side of the KWS-1. It is preferred that the buyer inspect and ship this equipment in person. It is located in Sarasota, FL.

Source record: 98034

Perhaps one of you can help.

With the BC-923 I recently found (receiver part of the SCR-808), there was an AN-75D antenna. The AN-75 is the antenna and feedline for the BC-728.

This AN-75 is different than the one with my BC-728, though. It does not have the coax line used to connect to the antenna jack and as a carry strap. Instead, it has a binding post where the coax would enter the housing. It does have the clamp.

Do you know anything about this antenna? I don't think it was part of the BC-923 unless there was a unusual configuration which used it.

My favorite memory is of a time I returned some memory chips (man were they cheap!). Anyway, I stupidly didn't double check before I left home and bought the wrong ones. Returning about six weeks later for a trip through the return line, which, as it is most of the time, is very short, I was greeted by a young man who spoke very broken English. I explained that I had bought the wrong chips and needed to return them. Being the savvy Fry's customer I am, I have all the paperwork in hand and proffer it to the clerk. He stares blankly at the papers for what must have been two full minutes, and I could sense my 15 year old's growing doubt that we will get to lunch before three o'clock. The clerk finally looks up ans says, "I am very sorry sir, but we have here a thirty day only return policy." I look him right in the eye and without missing a beat say, "Oh, that's OK because I have a sixty day return policy." Follows about 30 seconds of dead silence before

he answers, "OK, sir", and proceeds to cut the return sheet for me to take to the checkout.

My 15 year old, Tim, still laughs about that one.

Fry's, you gotta love 'em. Thanks for the laugh.

I have not personally heard the latest incarnation of the Woodpecker, but
the one that was running in the 1970's was indeed a Russian
over-the-horizon radar.

>Can't find much information about this in searching the WWW for info...
>does anyone know anything more about the "woodpecker", or perhaps where
>more info about it might be found?
>

Back when the Woodpecker was active, the English magazine "Wireless World"
ran an article about an amateur analysis of the signal. I can't give an
exact date reference for the article. As I recall, it was determined that
the signal was a form of spread-spectrum. I also recall that a tapped delay
line was used in the receiver to re-compress the nasty received signal to a
single pulse. The article also had some estimation of range resolution,
lots of numeric data, etc. It was believed capable of detecting an aircraft
at a huge distance.

I have a 15-20 minute tape of Africa #1 (Gabon shortwave station) being interfered with by the woodpecker, recorded in March of 1984. I made a copy of it for a guy in Germany who was going to do a big research project on it, and he was going to post the results on the web, I never heard back from him. It *was* Russian OTH radar, as I recall there were articles about it at the time in Pop'Comm.

Bob,

I missed you at the Grey's Lake Hamfest as well
as at the Joliet Hamfest.

I have some NOS tubes you may want and I need to
pay you for the last 50 or so tubes I got from
you..

When can we get together?

Give me a landline if you are going to be in the
Frankfort area in the next week or so....

Dennis

This is silliness. This is not any "list" and there are no
"subscribers." This is an internationally-promulgated USENET newsgroup
with likely a haof-zillion lurkers along with the active posters. If you
want to subscribe to a B/A list, then go do it, but please don't treat
this NG as if it is one. Lists have listowners that make & enforce
rules. You would never see this thread, or the need for it, on a list.

Hi Guys;
Heres is more "stuff" from my friend who has decided to sell just about all his extra Heathkit Items. Remember, none of these items have been tested, other than a few smaller items due to my time constraints. He said they work!
1) Heath DX-60A, all correct, exc. condx. Smooth finish! $70plus UPS!
2) Heath DX-60B, tune & load knobs are correct, all others the same type but not original. Wrinkle finish, $60plus UPS,Exc. Condx otherwise!
3) Heath VF-1 All correct, Very-good condx. $55ppd!
4) HM-11 reflected power meter, green smooth color, all correct, front panel is slightly pushed in. $15 plus UPS
5) Heath CP-1 Capacitor tester, Eye Tube lights up! $15 plus UPS!
6) Heath HD-1426 Field Strength meter, working! Exc. Condx $18ppd!
There no Manuals and everything "as-is".

>Perhaps it would bring some closure to the debate(s).

I held a straw-poll on rec.radio.swap to see how the readers felt about the eBay postings; of those who responded, a bit more than 50% were against. Since it was a non-binding straw-poll, I only asked that eBay posters append "FA" and "eBay" in the subject line of their posts so that such ads could be filtered by those not wishing to view such messages. Maybe Rick could come out and also make such a request for the r.r.a.ba readers.

I hate to see this group torn apart by something that can be solved as easily as writing an accurate subject-line.

An alternate solution would be to ask that all FS, FA, and WTB ads be placed on rec.radio.swap only.

This doesn't seem to be a very difficult request to comply with, Jeff,
and it causes "no harm" whatsoever to anyone. It's simply "truth in
advertising".

> An alternate solution would be to ask that all FS, FA, and WTB ads
> be placed on rec.radio.swap only.

Isn't "rec.radio.swap" *supposed* to be the place for all FS, FA, and
WTB ads? That was my understanding of the newsgroup charter and FAQ's;
please correct me if I'm mistaken. "Rec.radio.amateur.boatanchors",
from my understanding of the charter and FAQ's, is supposed to be the
place for "polite discussion of boatanchors, and discussion of matters
relating thereto". Unless I'm missing something in the charters and
FAQ's, they seem to be pretty clear as they stand...even tho one would
never know it from reading the newsgroups lately! <g>

When you have a chance, could you please re-post the charters and FAQ's
of both newsgroups in their respective groups...so everyone can read
them for themselves. Perhaps then all of us will know what we're
talking about...and if not, we can then ask questions and receive
factual answers.

Thanks,

-bill

Recently told I wasn't adding anything to the
technical threads in r.r.a.b.....
OK, here is part of my National research:
enjoy, (if the newsreader doesn't choke...)

National "coil-catacomb" radio family tree:
Filename: NC-100.txt
Copyright 1998, by Lawrence R. Ware
All rights reserved.

Introduction:
The National Radio Company, Inc. Introduced the first of its now
famous "coil-catacomb" radios with a brief announcement in 1935.
For the first radio of the series, the NC-100, deliveries started in
1936. The amateur version, the NC-101X) followed shortly thereafter.

Alphabetical Listing of all known National "Coil-Catacomb" Radios and
variants: (If you have one I don't know about, please drop me a line.
:-)

(Model designations in alphabetical order)

AN/GRR-3 (M3 page 95)
GRR-3 (M4 page 110)
WWII years?
NC-100ASC according to Moore

BC-903-A (M3 page 95)
WWII vintage
.54-30 MHz.
No crystal filter,
Navy version of NC-100A according to Moore.
(BC-903-A is perhaps an Army Signal Corps designation.)

NAO (AWA)
A very odd radio perhaps never went beyond prototype stage?
Appears to be another NC-100A variant with the extra RF preselector
stage on
rear (See RAO series.) Front panel has direct reading "A" type dial
and catacomb bandswitching knob, small rack handles, front mounted
fuse holders. Does not appear to have Crystal filter installed. Shown
in National photographs as a rack mount system, c
omplete with duel Dynamo rack mount
power supply. Appears to have Navy Grey paint instead of the classic
Black Wrinkle finish.
Post war? No other information available.

NBL (AWA)
Another very odd radio. Appears almost identical to NAO, except for an added 1/4" phone jack, labeled "XTAL," and another extra control labeled "OSC TEST." Appears to be another NC-100A variant with the extra RF preselector stage on rear (See RAO series.) Front panel has direct reading "A" type dial and catacomb bandswitching knob, small rack handles, front mounted fuse holders. Does not appear to have Crystal filter installed. Shown in National photographs as a rack mount system, complete with duel Dynamo rack mount power supply. Appears to have Navy Grey paint instead of the classic Black Wrinkle finish. Perhaps another post war prototype? No other information available.

NC-80X (M3 page 88, M4 page 101)
1937-38
4 bands, .55 to 30 MHz
1560 kHz IF, crystal filter, Balanced and unbalanced antenna inputs, AC/DC power. Slide rule dial, low cost catacomb radio.

Tube lineup:
6L7 Mixer
6J7 HFO
6K7 1st IF
6K7 2nd IF
6K7 3rd IF
6C5 Detector
6B8 AVC
6J7 BFO
25L6 AF out
25Z5 Rectifier

NC-80XB (M4 page 101)
Battery version of NC-80X,
6V6 AF output, needs 135V B+ and 6V heater power.

NC-81X (M3 page 88, M4 page 102)
1937-39
Ham band only model of NC-80X
5 bands, 10, 20, 40, 80, 160 meters.

NC-81XB (M4 page 102)
Battery model of NC-81X

The radio that started it all.
NC-100 (M3 page 88, M4 page 102, Man, Riders, NC1937, others)
1936-1938, 5 bands, 540-30,000 kHz
455 kHz IF (M3, M4), 456 kHz IF (Riders 8),
No crystal filter, PW dial system,
Tuning eye tube version.

This and the NC-100X are the so-called "Art Deco" design Nationals.
Horizontal bright red stripe, silver and black vertical stripes set
these apart from all the other coil catacomb models.

Tube line up: (from manual, agrees with M3, M4, & Riders)*
6K7 RF amp
6J7 Mixer
6K7 HF OSC
6K7 1st IF
6K7 2nd IF
6C5 Detector
6J7 AVC
6J7 BFO
6E5 tuning eye tube
6F6(2) Audio out (push pull)
80 Rectifier

*See Noise-Limiter Note

radio
in preparation. (Possible first ever reference in print to NC-100?)
Sept. 1936 article in "Short Wave craft" magazine:
The New National NC-100 Receiver, by James Millen and Dana Bacon.
Oct. 1936 issue of "Short Wave Craft" magazine ad.
Dec. 1936 issue of "Radio Craft" magazine ad.
Dec. 1936 issue of "All Wave Radio" magazine ad.
Feb. 1937 issue of "All Wave Radio" magazine ad.
1938 National Company Engineering Bulletin, (from: "Notes on Amateur
Radio
Transmitter Design" by James Millen, 1938) "The National NC-100
Receiver"
by James Millen and Dana Bacon.
Riders volume 8

NC-100 Battery (M3 page 88, M4 page 102, Man)*
1936-38, battery version of the standard NC-100
*See Noise-Limiter Note

NC-100A (M3 page 88, M4 page 102, Man)
1938-45,
"A" variant, new direct readout tuning dial replaces the PW type.
The first of the "A" series.
5 bands, .54-30 MHz, 455 kHz IF, s-meter
Tube lineup:
6K7 RF Amplifier
6J7 1st Detector
6J7 HF OSCILLATOR
6K7 1st IF
6K7 2nd IF
6C8 2nd Detector/Limiter
6F8 AVC / 1st Audio

6J7 BFO
6F6G(2) push-pull Audio out
80 Rectifier

(Note: The NC-100A and XA were also available in two different battery powered versions: The first and more common required external B+ and filament power. The second more unusual version contained an internal vibrator based power supply and required only 6 VDC to be provided.)

NC-100A special (M3 page 88, M4 page 102, PC)
NC-100A with LF band, 200-400 kHz (Sometimes incorrectly called the NC-100ALF)

NC-100ASC (M3 page 88, M4 page 102)
Moore's 4th says see GRR-3. (AN/GRR-3)

NC-100ASD (M3 page 88-89, M4 page 103, Man)
200-400 kHz and 1.3 MHz to 30 MHz, 5 bands, S-meter, 456 kHz IF
Band 1: 200-400 kHz
Band 2: 1,300-2,800 kHz
Band 3: 2,800-6,400 kHz
Band 4: 6,400-14,000 kHz
Band 5: 14,000-30,000 kHz
115V 60 or 25 Hz power supply
Binding post antenna connectors
Built to Army Signal Corps standards, this has a push-pull s-meter on-off
switch instead of the more common toggle.

Tube line up: (from manual, agrees with M3 and M4)
V-101 6K7 RF amp
V-102 6J7 First Detector
V-103 6J7 HF Oscillator
V-104 6K7 1st IF
V-105 6K7 2nd IF
V-106 6F8G 1st Audio + AVC
V-107 6C8G 2nd Detector + 2nd Audio
V-108 6J7 CW/BFO Oscillator
V-109 6V6G Audio out
V-110 5Z3 Rectifier

NC-100S (M3 page 89, M4 page 103)*
NC-100 with special 12" speaker
*See Noise-Limiter Note

NC-100X (M3 page 89, M4 page 103)*
NC-100 with crystal filter, this is the other National "Art Deco" design
coil catacomb radio. This radio was also available with a 200 - 400 KC low
frequency band. The low frequency version is sometimes incorrectly called

the NC-100XL or XLF.
*See Noise-Limiter Note

NC-100X battery (M3 page 89, M4 page 103)*
NC-100 battery powered model with crystal filter
*See Noise-Limiter Note

NC-100XA (M3 page 89, M4 page 103)
NC-100A with crystal filter

NC-100XAL special (M3 page 89, M4 page 103)
Has both Crystal Filter and special 200-400 KC LF band.
Binding post antenna terminals.

NC-100XS (M3 page 89, M4 page 103)*
NC-100X with 12" speaker
*See Noise-Limiter Note

NC-100XAM (M3 page 89, M4 page 103)

NC-101X (M3 page 89, M4 page 104)
1936-39
Ham band only version of NC-100, PW dial,
Tuning eye tube, crystal filter, 455 kHz IF
5 ham bands, 160, 80, 40, 20, 10 meters
tube line up:
6K7 1st RF
6J7 Mixer
6K7 HF OSCILLATOR
6K7 1st IF
6K7 2nd IF
6C5 Detector
6J7 AVC
6J7 BFO
6F6(2) push pull Audio out
6E5 tuning eye
80 Rectifier

Earliest reference to this radio I have found is an ad in Feb. 1937
QST magazine. I also have a photocopy of a letter from James Millen to

Bill Orr briefly discussing this unit.

NC-101X variation (M3 page 90, M4 page 104)*
S-meter replaces "eye" tube
Push-pull s-meter switch
*See Noise-Limiter Note

NC101X battery (M3 page 90, M4 page 104)
Battery version of NC-101X, needs 180V B+ @ 35 ma and 6V heater power
6K7 1st RF
6J7 Mixer
6K7 HF OSCILLATOR

6K7 1st IF
6K7 2nd IF
6C5 Detector
6J7 AVC
6J7 BFO
6F6 Audio out
6E5 tuning eye.

NC-101XA (M3 page 90, M4 page 104)
1939-41
Amateur band version of NC-100A,
S-meter, noise Limiter, crystal filter, 455 kHz IF
5 bands, 160, 80, 40, 20, 10 meters
6K7 1st RF
6J7 Mixer
6K7 HF OSCILLATOR
6K7 1st IF
6K7 2nd IF
6C8 Detector/noise Limiter
6J7 BFO
6F8 first Audio/AVC
6F6 (2) PP Audio output
80 Rectifier

NC-120 (M3 page 90, PC, M4 page 105, AWA)

I have conflicting information concerning the NC-120. An original National
photograph (provided thanks to Alan Douglas) of this radio is also marked
"RAO-2". I know of at least one NC-120 with contract data plate still
attached that says it is part of radio type CAN-46187. Yet this radio
continues to be a minor mystery, Virtually identical to the RAO-3/4 and
RAO-6, it is clearly a member of the family, yet my copy of the RAO 3&4
manual states that the manual is unsuitable for use with the RAO-2 due to
significant differences between the radios. Mine, also has a panadaptor
output, which is shown in only SOME of the National NC-120/RAO-2 rears view
photographs. Antenna connections are another problem, Mine has standard
National type binding posts, yet National Company photographic records show
an unusual coax connector as correct. My antenna binding posts are clearly
unmodified.

Similar to NC-100A with added RF stage bolted/welded to rear of
cabinet.
Separate coil catacomb and variable tuning capacitor ganged to main
controls.
S-meter, s-meter switch, crystal filter, 455 kHz panadaptor output
(SO-239
type) Some have Binding Post type antenna connectors, some coax based
antenna
input.

5 bands, 540-30,000 kHz
Band A 14-30 MHz
Band B 6.4-14 MHz
Band C 2.8-6.4 MHz
Band D 1.3-2.8 MHz
Band E .54-1.3 MHz

Tube Data from my radio:
V-101 6K7 1st RF Amplifier
V-102 6K7 2nd RF Amplifier
V-103 6J7 1st Detector
V-104 6K7 1st IF Amplifier
V-105 6K7 2nd IF Amplifier
V-106 6C8G 2nd Detector & Limiter
V-107 6F8G 1st Audio & AVC
V-108 6K6GT 2nd Audio (output)
V-109 6J5 HF OSCILLATOR
V-110 6J7 BFO OSCILLATOR
V-111 VT-145/5Z3 Rectifier

NC-127 (M3 page 91 & 123, M4 page 105)
WWII vintage
(Moore's reports 4 bands, I believe it should be 5) .54-30 MC
455 kHz IF, crystal filter
Similar to NC-100XA
Has rack type handles and front panel captive style rack-retaining
screws.

Tube line up from Moore's 3rd:

2 6K7 RF amps.
1 6J7 Mixer
1 6J5 HFO
2 6K7 IF amps.
1 6C8 Detector/NL
1 6J7 BFO
1 6F8 1st Audio/AVC
1 6V6 Audio out
1 5Z3 Rectifier

NC-127D (M3 page 91 & 123, M4 page 105)
Used in experimental triple diversity system.
Only one system (three receivers) believed to have been made.

Added two position "DIVERSITY" control and a DIVERSITY IF GAIN
CONTROL.

NC-1-39 (M4 page 105)
5 bands, .54-30 MHz, crystal filter,
Moore reports this is another modified NC-100XA with two headphone
jacks.
Designed for headphones use only, no Audio power amplifier.

Tube line up from Moore's 4th:
1 6K7 RF Amplifier
1 6J7 1st Detector/mixer
1 6J7 HFO
2 6K7 IF amps.
1 6C5 2nd Detector
1 6J7 AVC
1 6J7 BFO
1 80 Rectifier

NC-1-39S (M4 page 105)
5 bands, 200-400 kHz, .495-1.060 & 1.3-14.4 MHz
Same as NC-1-39 except for band coverage.
Radio is intended for VLF and Direction Finding, (DF) use.

NC-156 (MAN)
Navy NC-100XA variation, with 1560 KC IF system, and unusual tuning
ranges.
Unlike the later NC-156-1 and - 2, the standard NC-156 does not have
the extra RF stage. Also known as Type CNA-46144, and the RBH, the
manual I
have lists General Electric Supply Corp. as the primary contractor.
(See RBH)
Ten (10) tubes, s-meter, 1560 KC crystal filter.
5 bands,
300-600 kHz
600 kHz - 1.2 MHz
1.7-3.9 MHz
3.6-8.2 MHz
8-17 MHz

Tube line up: (from manual)
V-101 6K7 RF amp
V-102 6J7 First Detector
V-103 6J5 HF Oscillator
V-104 6K7 1st IF
V-105 6K7 2nd IF
V-106 6F8G 1st Audio + AVC
V-107 6C8G 2nd Detector + Limiter
V-108 6J7 CW/BFO Oscillator
V-109 6V6G Audio out
V-110 5Z3 Rectifier

NC-156-1 & NC-156-2 (M3 page 91, M4 page 106, PC, MAN, AWA)
Navy NC-100XA with two RF stages and 1560 KC IF chain
Eleven tubes, s-meter, 1560 KC crystal filter. Only known difference
between
the -1 and -2 versions is removal of a "dummy" plug, (replaced with a
blank plate) on the rear of the radio.
5 bands,
300-600 kHz
600 kHz - 1.2 MHz
1.7-3.9 MHz
3.6-8.2 MHz
8-17 MHz
(See RBH series)

Tube Data from my NC-156-1 radio:
V-101 6K7 1st RF Amplifier
V-102 6K7 2nd RF Amplifier
V-103 6J7 1st Detector
V-104 6K7 1st IF Amplifier
V-105 6K7 2nd IF Amplifier
V-106 6C8G 2nd Detector & Limiter
V-107 6F8G 1st Audio & AVC
V-108 6K6GT 2nd Audio (output)
V-109 6J5 HF OSCILLATOR
V-110 6J7 BFO OSCILLATOR
V-111 VT-145/5Z3 Rectifier

NC-200 (M3 page 92, M4 page 107, Man, Riders 14, AWA) 1940-43
Ten bands, 6 general coverage, 4 ham bandspread.
490-30,000 kHz, bandspread - 10, 20, 40, 80 meters
Crystal Filter, 12 tubes, s-meter.
Ten ranges, calibrated frequency dial, this is the first of the coil
catacomb
radios to have both "general coverage" and "bandspread" ham bands in
the same
radio. The main tuning control has a push-pull function that allows
you to
select either the six general coverage or 4 ham bands as well as set
the
desired tuned frequency. This radio has the odd "slatted sides" also
seen
on NC-2-40 series radios. Possibly the first to use them? The cast
"coil-catacomb" on these and later models which have both general
coverage
and amateur bandspread ranges have a far more complex internal
construction.

Tube lineup from manual:

6SK7 RF Amplifier
6K8 1st Detector
6J5 HFO

6K7 1st IF Amplifier
6SK7 2nd IF Amplifier
6C8 2nd Detector/Limiter
6SJ7 AVC
6SJ7 BFO
6F8 1st Audio and Phase inverter
6V6(2) push-pull Audio output
5Y3G Rectifier

NC-200RG (M3 page 93, M4 page 107)
rack model of above

NC-200TG (M3 page 93, M4 page 107)
Table model of above, (may be same radio: nomenclature issue.)

NC-200TGM (M4 page 107)
NC-200TG without ham bandspread

NC-2-40 (M3 page 93, M4 page 108)
1943-44
(Successor to NC-200 according to Moore)
6 bands, .49-30 MHz, 455 kHz IF
Crystal filter, 13 tubes, s-meter
6SK7 RF Amplifier
6K8 Mixer
6J5 HF OSCILLATOR
6K7 1st IF
6SK7 2nd IF
6C8 Detector/NL
6SJ7 AVC
6SJ7 BFO
6J5 1st Audio
6F8 Phase Inverter
6V6(2) push-pull Audio out
80 Rectifier

NC-2-40C (M3 page 93, M4 page 108, SRPP page 234, Riders 15)
1945-46 (M3, M4) 1946-47 (SRPP)
115-230V, 455 IF, crystal filter, s-meter
six bands, 490-30,000 kHz
6SK7 RF Amplifier
6K8 Mixer
6J5 HF OSCILLATOR
6K7 1st IF
6SK7 2nd IF
6SL7 Detector/NL
6SJ7 AVC
6SJ7 BFO
6SN7 1st Audio/Phase Inverter
6V6(2) push-pull Audio out
5Y3GT Rectifier

NC-2-40CR (SRPP page 234)
Rack version of NC-2-40C

NC-2-40CS (M3 page 93, M4 page 108, SRPP page 234, Riders 15)
Same as NC-2-40C except
LF band 200-400 kHz and 1000-30,000 kHz coverage.

NC-2-40CSR (SRPP page 234)
Rack version of NC-2-40CS

NC-2-40D (M3 page 93, M4 page 108, SRPP page 235, Man)
1946-49 (M3, M4), 1947-48 (SRPP)
10 Bands, 6 GC + 4 ham bandspread, 10, 20, 40, 80 meters.
490-30,000 kHz
455 kHz IF, crystal filter, s-meter

tube line-up:
6SK7 RF Amplifier
6K8 Mixer
6J5 HF OSCILLATOR
6K7 1st IF
6SK7 2nd IF
6SL7 Detector/NL
6V6 AVC
6SJ7 BFO
6SN7 1st Audio/Phase Inverter
6V6(2) push-pull Audio out
5Y3GT Rectifier

NC-2-40DR (M3 page 93, M4 page 108)
Rack model NC-2-40D

NC-2-40DT (M3 page 93, M4 page 108)
Table model

NC-2-40S (M3 page 93, M4 page 108, Man)
(Odd coverage .2-18 MHz, otherwise same as NC-2-40 according to
Moore.)

6 bands, 200-400 kHz, 490-1,060 kHz, 1,000-2,400 kHz, 2,200-5,000 kHz,
4,500-10,000 kHz, and
9,000-18,000 kHz
External type 2-42 power unit required. Cable with 7 prong connectors
supplied. 115/230 VAC
Binding post antenna terminals, s-meter, crystal filter

Tube line up: (from my manual copy)

V-1 6SK7 RF Amplifier
V-2 6K8 1st Detector
V-3 6J5 HF OSCILLATOR
V-4 6K7 1st IF Amplifier
V-5 6SK7 2nd IF Amplifier
V-6 6C8 2nd Detector/Limiter

V-7 6SJ7 BFO
V-8 6SJ7 AVC
V-9 6F8 1st Audio/Phase inverter
V-10 6V6 Audio out
V-11 6V6 Audio out
V-12 6J5 headphone Amplifier
V-13 80 Rectifier (in power supply)

Notes: The manual copy I have states:
"Made for Pan American Airways System, Chrysler Building, NYC" on the
cover.

NRCL (M3 page 95. M4 page 110)
1944-45
NC-100 variant for dual diversity system, part of NCRM system.

NCRM (M3 page 95)
1944-45
NC-100 based dual diversity system.
Probably experimental, M3 only reference so far.

R-115 (M3 page 95 & 123, M4 page 111, AWA)
WWII vintage
AC/DC set, no crystal filter
6 bands, 200-400KC and 490KC to 18MHz
Similar to NC-200, but without Amateur Bandspread or Crystal filter.
Made for US Coast Guard.
(R-115 sounds like a JAN (Joint Army-Navy) designation, which would
Probably have a AN/SRC-*** (for surface ship) or AN/GRC-*** "system"
Designation as well.)

Tube line up (from Moore's)
4 117N7
3 12SK7
1 12K8
1 12J5
1 12SC7
1 12C8
1 12SR7
1 12SJ7
(This must be a very odd set...)

Contract: TCG-23454 Order # CG-80110? Date: 10DEC1940

R-116 (AWA)
NC-100A based US Coast Guard Radio Receiver, may never have proceeded
beyond prototype stage. Mostly unknown, Has Crystal Filter, BFO and
AVC
control, 300/600 Ohm speak terminals & Binding post type antenna
terminals.

Contract: TCG-33675 Order #: CG-80265? Date: 15MAY1941

RAO Notes: Moore's 3rd reports RAO-1 through RAO-8 as identical radios. I
have found that this is not the case. Each model has variations enough to
justify separate listings. Some radios have s-meters, some have aux.
"panadaptor" outputs. Several different "antenna" connectors were used,
including binding posts, an odd oversized Motorola type plug and SO-239's?
(I continue to wonder how original/correct the SO-239's are?) Minor
differences in rear panel layout of power, speaker, antenna, and battery
connectors exist. I suspect that differences between manufactures exist even
within the same series number. (At least in tube line up, i.e. 6F6, vs. 6V6,
vs. 6K6 audio output.) Because the RAO series were built during WWII
primarily for the Navy, small engineering changes may have been made from
production run to production run just because of parts availability.
Information that exactly matches many RAO series radios has proved difficult
to locate. Several RAO's I have examined do not exactly agree with the Navy
documents for that model. It appears that some units were built only by
National, (RAO-2/6?) some only by Wells-Gardner, (RAO-4?) and some by both
companies. I continue to research this issue. Where the National NC-120 fits
into this puzzle remains unclear, I own one NC-120 and have seen several
others. None exactly match photographic records from National.

Moore's 4th adds another variation: On page 111 an RAO without a suffix number/code.
(See RAO)

I have located several references in National documentation to an RAO-9 radio. (See RAO-9)
This remains mostly a mystery set.

Moore's 3rd lists generic data for the RAO-1 through RAO-8 as follows:
Crystal filter, added RF stage, 455 kHz IF, 5 bands, 540-30,000 kHz.
Tube line up:
6K7 1st RF
6K7 2nd RF
6J7 Mixer
6J5 HF OSCILLATOR
6K7 1st IF
6K7 2nd IF
6C8 Detector / noise Limiter

6J7 BFO
6F8 1st Audio / AVC
6V6 Audio output
5Z3 Rectifier

RAO (M4 page 111)
1938, 5 bands, .54-30 MHz coverage.
456 kHz IF, crystal filter.
Moore (4th) lists the Navy designation as: CNA-46072, with GE as the contractor.
Moore reports that this very early version does not have the added RF stage attached to the back.

RAO-1 (M3 page 95. M4 page 111)
WWII vintage
Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and variable tuning
Capacitor ganged to main controls.
May have been built by Wells-Gardner as well as National, using National parts.

RAO-2 (M3 page 95, M4 page 111, AWA)
WWII vintage
Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and variable tuning
Capacitor ganged to main controls.
This is the Navy version of the NC-120 radio.
(See NC-120) Part of CNA-46187 radio system.
High S/N known 2112, date code: 11/20/1943

RAO-3 (M3 page 95, M4 page 111, partial Man)
WWII vintage (Navy type CWQ-46187-A)
Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and variable tuning
Capacitor ganged to main controls.
Built by Wells-Gardner as well as National, using National parts.
115V 60 Hz
.54-30 MHz, five bands., odd antenna connector,
S-meter, s-meter switch, crystal filter, no panadaptor output.

Known contract(s):
NXss-21446 high S/N known: 853, Date: 11/18/1943.

Tube Data from manual in my files:
V-101 6K7 1st RF Amplifier
V-102 6K7 2nd RF Amplifier
V-103 6J7 1st Detector
V-104 6K7 1st IF Amplifier
V-105 6K7 2nd IF Amplifier

V-106 6C8G 2nd Detector & Limiter
V-107 6F8G 1st Audio & AVC
V-108 6K6GT 2nd Audio (output)
V-109 6J5 HF Oscillator
V-110 6J7 C.W./BFO Oscillator
V-111 5Z3 Rectifier

RAO-4 (M3 page 95, M4 page 111, partial man, PC)
WWII vintage (Navy type CWQ-46187-B)
Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and
variable tuning
Capacitor ganged to main controls.
Built by Wells-Gardner as well as National, using National parts.
115 or 230V 60 Hz (except for dual input main power transformer, same
as RAO-3.)
540 kHz - 30 MHz, five bands, odd antenna connector.
S-meter, s-meter switch, crystal filter, no panadaptor output.

Tube Data from manual in my files:
V-101 6K7 1st RF Amplifier
V-102 6K7 2nd RF Amplifier
V-103 6J7 1st Detector
V-104 6K7 1st IF Amplifier
V-105 6K7 2nd IF Amplifier
V-106 6C8G 2nd Detector & Limiter
V-107 6F8G 1st Audio & AVC
V-108 6K6GT 2nd Audio (output)
V-109 6J5 HF OSCILLATOR
V-110 6J7 C.W./BFO OSCILLATOR
V-111 5Z3 Rectifier
(Note that my Wells-Gardner RAO-4 has a 6V6 audio output, not the 6K6
the Navy (National) manual specifies. 6V6 is printed (inked) next to
the tube socket in mine.)

Known contract(s):
NXss-21446 High S/N unknown
(See RAO-3)

RAO-5 (M3 page 95, M4 page 111)
WWII vintage
Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and
variable tuning
Capacitor ganged to main controls.
May have been built by other contractors (Wells-Gardner, etc.) as well
as National, using National parts.
Moore reports (4th) that the USN code for this radio was: CWQ-46229

RAO-6 (M3 page 95, M4 page 111, Man, Pvt.)
WWII vintage, Navy type # CNA-46187-D, Part of Navy CNA-46233 Receiver
System.

Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and
variable tuning
Capacitor ganged to main controls.
May have been built by Wells-Gardner as well as National, using
National parts.
540-30,000 kHz, 11 tubes, five bands, crystal filter, s-meter
455 kHz IF, has aux. panadaptor output, (SO-239.)
Odd oversized antenna connector is correct for the type 6.

Known contract data:
NXsr-38306 high S/N ? Date: 22SEP1943 (from my manual copy)
NXsr-38306 high S/N 648 Date 31JAN1945 (Pvt. Communication)
NXsr-38306 high S/N 653 Date 15JUN1944 (Pvt. Communication)

Tube data from manual in my files:

V-101 6K7 1st RF Amplifier
V-102 6K7 2nd RF Amplifier
V-103 6J7 1st Detector
V-104 6K7 1st IF Amplifier
V-105 6K7 2nd IF Amplifier
V-106 6C8G 2nd Detector & Limiter
V-107 6F8G 1st Audio & AVC
V-108 6K6GT 2nd Audio (output)
V-109 6J5 HF OSCILLATOR
V-110 6J7 C.W./BFO OSCILLATOR
V-111 5Z3 Rectifier

RAO-7 (M3 page 95, M4 page 111, Man, Pvt., AWA)
WWII vintage, Navy type # CNA-46233
Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and
variable tuning
Capacitor ganged to main controls. Has panadaptor output on back,
(SO-239.)
NC-127 look alike, with heavy rack type capture screws around face.
(May have been built by Wells Gardner as well as National. Open
question yet.)
.54 to 30 MHz, five bands W/crystal filter.
455 kHz IF

Known contracts:
NXsr-55614 high S/N 1587 date: 31MAY1945 (Navy Bureau of
Ships)
NXsr-38306 high S/N 444 date: ?
Part of Navy CNA-46233 Receiver System.

In the case of the RAO-7 some interesting information was found in a
copy of
the: "Preliminary Instruction Book, Contract NXsr-55614, 13FEB1945."
The

document states that:
1073 "Receivers" were contracted for, along with 1073 "Spare Parts
Sets,"
107 Stock Spare Parts Sets," 4146 "Preliminary Instruction Books,"
(this data is from one of them) 4646 "Final Instruction Books," and
107
unspecified "Additional Spare Parts." (Pvt. Communication)

Tube Data from manual in my files:

V-101 6K7 1st RF Amplifier
V-102 6K7 2nd RF Amplifier
V-103 6J7 1st Detector
V-104 6K7 1st IF Amplifier
V-105 6K7 2nd IF Amplifier
V-106 6C8G 2nd Detector & Limiter
V-107 6F8G 1st Audio & AVC
V-108 6K6GT 2nd Audio (output)
V-109 6J5 HF Oscillator
V-110 6J7 C.W./BFO Oscillator
V-111 5Z3 Rectifier

RAO-8 (M3 page 95, M4 page 111)
WWII vintage
Built for US Navy, similar to NC-100A with added
RF stage bolted/welded to rear of cabinet. Separate coil catacomb and
variable tuning
Capacitor ganged to main controls.
May have built by Wells-Gardner as well as National, using National
parts.

RAO-9 (Brief mention in my National RAO-7 manual, AWA)
Part of Navy System: CNA-46283
Has both small rack mount "handles" and "Capture" Screws on front
panel
(like NC-127) Crystal filter, Panadaptor output, odd coaxial type
antenna
connector. Another NC-100A variant with the extra RF preselector
built on
the back. No other data available yet...

RBH series (M3 page 96, M4 page 111, MAN, Pvt.)
(Note that Moore's 3rd & 4th do not differentiate between the 3
versions.)
Navy NC-100XA type variations, some with two RF stages, the extra
stage bolted to rear like most RAO series. Unusual 1560 kHz IF
(See NC-156, NC-156-1, NC-156-2)

Known contracts:

RBH Contract # 87668, major part of CNA-46144, contractor was the
General Electric Supply Company.

RBH-1 Contract Number NXs- 738, major part of CNA-46188 system, high serial number unknown, contract date was April 30, 1942
RBH-2 Contract Number NXss-19881, major part of CNA-46188 system, high S/N known: 1269, Contract date was January 2, 1943
RBH-3 Contract Number NXsr-33381, major part of CNA-46188 system, high serial
number unknown, Contract date was June 30, 1943

RBL-1 through 5 (PC, Man, AWA)
Built on NC-100A chassis, this VLF-LF receiver is only a NC-100A look alike
on the outside. Under the skin, it is a completely separate design based on
TRF tuning and regenerative detection. 10-600 KC made by National and Wells Gardner using National parts. WW II years.
(A very interesting, and fun to use radio. Without a coil catacomb, It doesn't really belong to the NC-100 family. Often mistaken for a NC-100A.)

RC-120 (AWA)
NC-100A variation built for the US Coast Guard.
This one has a tuning eye instead of the normal for the 100A series S-meter. In addition, does not appear to have a Crystal Filter installed.
2 to 18 MHz in three bands
Contract TCG-33991? 24SEP1941
(Apparently a very early 100A variant...)

"Airways Ground Receiver" (AGR) series:

AGR Series note: All AGR series radios were rack mount versions, designed for the standard 19" rack environment.
They were sometimes supplied with an optional enclosure for desk or tabletop use.

RCD (PC)
Early NC-100X CAA variant. Has Crystal Filter, and 6E5 tuning eye tube.
Push-Pull Audio output. With 200 - 400 kHz low band.
I believe this was the first of the CAA AGR series. This radio seems to be a
standard early NC-100 (W/tuning eye) equipped with the low frequency first band option, (200 - 400 KC) in a 19" rack mount configuration.

Tube lineup:

6K7 RF amp
6J7 Mixer
6K7 HF OSC
6K7 1st IF
6K7 2nd IF
6C5 Detector

6J7 AVC
6J7 BFO
6E5 tuning eye tube
6F6(2) Audio out (push pull)
80 Rectifier

Known Contract:

Contract (unknown) Order # 37-7383 high S/N 101
Built by National, information from data plate on radio.

RCE (M3 page 96 & 123, M4 page 112, AWA) "Airways Ground Receiver" *
Modified NC-100 for airport control tower use.
>From about 1937-38, 5 bands, 200 - 400 kHz, 1.3-30 MHz
457 kHz IF, no crystal filter, Binding post antenna terminals.

Tube lineup from Moore's 4th:

6K7 1st RF
6J7 1st Detector/mixer
6J7 HF OSCILLATOR
6K7 1st IF
6K7 2nd IF
6C5 2nd Detector
6J7 AVC
6J7 BFO
6J7 INS control
6C5 1st Audio
6V6 Audio output
80 Rectifier

Known Contracts:

Contract (unknown) Order # 38-2833 high S/N 187 01OCT1937
Built by National, modified by Westinghouse Electric and Manufacturing
Co.

Contract (unknown) Order # 38-2832 high S/N 478 unknown
Built by National, modified by Bendix Radio

*At least one prototype unit produced directly by National with
crystal control. Photographs #938 & 968, 969. 970 & 971 in AWA
National records. Labeled as the model RCE-X.

RCF (Man, Pvt.) "Airways Ground Receiver"
"Interchannel Noise Suppression" radio.
457 kHz IF, does not have variable bandwidth IF transformers.
Does not have crystal frequency control option.
(Interestedly, the picture in the RCF manual of the radio shows a
Bendix Radio Corp. data plate.)

Tube lineup from manual:

VT-1 6K7 RF amp
VT-2 6J7 Mixer
VT-3 6J7 HFO
VT-4 6K7 1st IF Amplifier
VT-5 6K7 2nd IF Amplifier
VT-6 6C5 Detector
VT-7 6C5 1st Audio/squelch
VT-8 6J7 BFO
VT-9 6J7 AVC
VT-10 6J7 I.N.S. Amplifier
VT-11 6V6 Audio output
VT-12 80 Rectifier

Known Contracts:

Contract (unknown) Order # 39-2748 high S/N 118 Date:
30JUN1939
Made by National, supplied by Federal Telegraph Co. Newark, NJ

RCH (AWA photo)
Modified NC-100, PW dial, I.N.S. system.
5 bands, 200 - 400 kHz, 1.3-30 MHz

Known Contract(s):

Contract (unknown) Order # 40-1760 high S/N unknown Date:
19OCT1939
Made by National, supplied by Bendix Radio Corp. Baltimore, MD

RCK (M3 page 96, M4 page 112, RCP manual page 5,AWA) "Airways Ground
Receiver"
Moore's 3rd calls this a NC-100A Moore's 4th a NC-100. It is a
modified NC-100 (no A) chassis with PW dial. Mostly an unknown variant
(mentioned briefly in RCP manual) and I have some photographs
(#1030-1036, 1058, 1059) from the AWA National archives o
f a type RCK-1. The photographs show both C.O.N.S. and variable
bandwidth IF, and a dual 120/240 VAC power supply.
No Crystal control option.

Contract Cca-617? Order # unknown high S/N unknown
Built by National for General Electric Supply Corp. Washington, D.C.

Contract, Cca-978 Order # unknown high S/N unknown
Built by National for Bendix Radio Corp.

Contract (unknown) Order # 38-2833 high S/N 187 Date:
01OCT1937
Built by National, modified by Westinghouse Electric and Manufacturing
Co.

Contract (unknown) Order # unknown high S/N 235 Date:
30JUN1939
Part of VF Radio Equipment No's 6736 (Pvt. Communication)

RCL (M3 page 96 & 123, M4 page 112, Man, AWA) "Airways Ground
Receiver"
Modified NC-100, Roughly WWII vintage
5 bands, 200 - 400 kHz, 1.3-30 MHz
455 KC IF with odd modified variable coupling IF transformers.
The IF coupling can be changed from sharp to broad from a front panel
switch
on this radio. This feature was later deleted when government
contractors
refurbished these radios.
(See type RCP & RCQ.)
Squelch circuit (CONS) added. Crystal oscillator tuning option added,

Tube lineup from Moore's 3rd & 4th.

6K7 RF amp
6J7 Mixer
6J5 HFO
6K7 1st IF Amplifier
6K7 2nd IF Amplifier
6C5 Detector
6F8 1st Audio/squelch
6J7 BFO
6J7 AVC
6J7 CONS amp
6V6 Audio output
80 Rectifier

RCP (M3 page 96, M4 page 112, PC {2}, Man, PVT) "Airways Ground
Receiver"
Moore calls this a NC-100A on page 96 of his 3rd edition,
This is incorrect, it is a NC-100 (no A) chassis with PW dial.
Modified NC-100, Roughly WWII vintage
200 - 400 kHz, 1.3-30 MHz
455 KC IF with three odd modified variable coupling IF transformers.
Squelch circuit (CONS) added. Crystal oscillator tuning option,

Known contracts:
CAA Contract # Cca-24653 Order 46-1467, high S/N 825 30OCT1945, built
by National, modified by Schuttig & Company, from an RCK or RCL. (See
manual page 5)

Tube data from manual in my files:

V-1 6K7 RF Amplifier
V-2 6J7 1st Detector
V-3 6J5 HF OSCILLATOR
V-4 6K7 1st IF Amplifier
V-5 6K7 2nd IF Amplifier
V-6 6C5 2nd Detector
V-7 6F8G 1st Audio & CONS
V-8 6V6 2nd Audio (output)
V-9 6J7 BFO

V-10 6J7 AVC Amplifier
V-11 6J7 AVC control
V-12 80 Rectifier

RCQ (Man, Pvt.) "Airways Ground Receiver"
Modified NC-100, Communications Receiver,
200 - 400 kHz, and 1.3-30 MHz
455 kHz IF, with two odd modified variable coupling IF transformers,
Squelch circuit (CONS) added, Crystal oscillator tuning option.

Tube data from manual in my files:

V-1 6K7 RF Amplifier
V-2 6J7 1st Detector
V-3 6J5 HF OSCILLATOR
V-4 6K7 1st IF Amplifier
V-5 6K7 2nd IF Amplifier
V-6 6H6 2nd Detector & noise Limiter
V-7 6F8G 1st Audio & CONS
V-8 6V6 2nd Audio (output)
V-9 6J7 BFO
V-10 6J7 AVC Amplifier
V-11 6J7 AVC control
V-12 80 Rectifier

Known contracts:
CAA, contract # CCA-26227 high S/N 404 05FEB1948, made by National,
modified
by National Electric Machine Shops, Silver Springs, MD. From a type
RCK or
RCL. (See manual page 5) (I believe this was the last of the CAA
contracts.)
An acquaintance has reported owning one of these with S/N B366.
Unfortunately all the contract data plates are long gone on his radio.

Could there of been more than one series?

RHZ (unknown variant, mentioned briefly on page 5 of RCQ manual, Pvt.)

Known contracts:

CAA, contract # Cca-15856, high S/N 35, made by National, modified
by:
Communications Equipment Corp.
Pasadena, California - USA

CAA Contract # Cca-232876, high S/N 1048, made by National, modified
by:
Communications Equipment Corp.
Pasadena, California - USA

A Note on Noise Limiters; still more variations:
During the production years of NC-100's, NC-101X's and NC-100A's

National
introduced a new "noise Limiter" circuit to many of its models. This
change
was documented in a brief (4-page) addendum supplied with owner's
manuals for
affected radios. A 6C8G and a 6F8G has replaced the 6C5 second
detector and
the 6J7 AVC tubes previously employed. The 6C8G elements comprise an
infinite impedance diode second detector and the new series-valve
noise
limiter while the 6F8G is used for AVC and a new first audio stage.
The circuit was described in some detail in the October 1939 issue of
QST.
The really interesting thing about this noise-limiter is that the
design
change was made in mid-production for many of the early Nationals
without a
model number change. The collector will run across later radios with
the
change and earlier radios without it.

Well, I'm not Tim, I always sign my own call, and I'm tired of the eBay posts. Check me out. I've never bid nor sold on eBay. But I am tired of you elbowing your way in here time and time again hawking your wares. I would like to think that we are all enthusiasts here, willing to trade below value for an item we'd like to have, or supplying gratis an un-needed part to help someone in need. I fail to see why, if eBay is so great, you need to be over here so often! You are like the noisey airplane hauling a banner over a sporting venue: we're not interested, we came for another reason, and you are spoiling our good time.

As for your braying that "the vote has already been taken," there has been no such pole come across my screen. Your annoying posts are the only reason at present to even consider a moderated ng.

Source record: 98130

They are very easy to make up.
all you need is the 15 pin cinch-jones connector a fuse holder and a AC cord.
I just made one up for my Swan 250C.
Or contact KD6CRL, John Bruchey at 760-757-4717. I is a retired Swan service tech and he has them made up. I'm sure that he will sell you one. If you call him, tell him that I referred you.
Good luck. Mike Tyler, K6STU.

Well Dave, I don't know that I can agree with you on the "low-ball" comment . . .

After further review, it appears that you win the "low-ball" contest when pitted against Tim. Here's why - old MH did some research and sent it to me:

Tim bid in 11 auctions since 9/4/98 (as far back as MH found a record.) Although he was not the high bidder in any of them, he was the low bidder in only two and the second lowest bidder in another. He bid in auctions where the average high bid was $187.98 and there were an average of 18.0 bids in each auction.

Since the middle of August (as far back as MH found a record), you have bid in 26 auctions. You were the high bidder in 8 but you were the low bidder or the second lowest bidder in 9 others. Of the 8 that you "won", you were the only bidder in 2 of them. In 3 other "wins", there were only 3 bids. So, in 5 of your 8 "wins", there were a grand total of 6 other bids! The average high bid in the 26 auctions was $37.14 and there was an average of 5.65 bids in each one.

So, it seems, one could draw the following conclusions:

1. You have tended to bid in lower priced auctions with fewer bidders.

2. You were the low bidder or second lowest bidder 34 percent of the time.

3. Tim tended to bid in higher priced auctions with larger numbers of bidders.

4. He was the low bidder or second lowest bidder 27 percent of the time.

Thus, it would seem, the term "lowball" is more appropriately applied to you.

LJR (aka "Legs")

PS Better get the biplane warmed up . . .

Mr. Rockford--
That's a pretty lame attempt to distract attention
from the point. I don't think you're going to
fool very many people, except the simple-minded of course.

You don't see *me* bitching about Ebay,
or whining about high prices.

Try again.

It's a myth that Fry's prices are the best around - it only applies to the obsolete and broken. I guess people are taken in by the extensive TV advertising.

Last week, I checked out prices there on an Adaptec 2940UW - $250 - and a 3Com Etherlink - $80. My neighborhood store does the same items for $175 and $75 respectively. I'd prefer to pay a bit more than go to the dreaded F-store anyway.

I agree about returns to Fry's tho - as long as you pay by CC you're ok - except for the lines at peak hours.

I consider Fry's the absolute last resort - I go there only when all else fails.

Sir,

I have no idea what a 1A is worth.

Would be interested in purchasing one for my Drake collection.
Currently I have 2B, R4, R4A, R4B, R4C, R7, TR7 and several transmitters but missing a 1A.

Please give me an idea as to what you are looking to get and would be very interested in purchasing both or one???

It was in 73, in about a dozen different configurations depending on the HyGain board. There was also at least one article in QST.

73 ran perhaps 50 CB conversion articles. About a dozen years ago, I dropped Wayne Green a note asking whether he had plans to produce a compilation.

A few weeks later, I received a brief handwritten note from him asking for a proposal to do the book....

In 1998, I don't think there are enough good easily converted CBs left in the world to justify the compilation, but there are probably enough hams out there who'd buy the book that its author would earn his 15 minutes of fame.

After all, look at how long Tom Kneitel's "Surplus Conversion" books have lasted.

Hello everyone,
I have the following items for sale, all prices plus shipping:

1. Heath SB100 transceiver with power supply and original construction manual.
In excellent condition. $150

2. Hallicrafters S20 (not S20R). Purchased "restored" but restoration job
leaves
something to be desired... Chassis in very good shape, missing 80 rectifier.
$90

3.Hallicrafters SX110. Excellent working receiver with good cosmetics. $100

4. Knight Y-726 (same as R100). Modified with an internal speaker and S-meter.
Also has a homebrew CB transmitter inside. Receiver works, transmitter
untested.
$35

5. Heath O-10 Scope with original construction manual. $25

Thanks!

3517. Re: Got that old time religion.(LONG BABBLE)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-30 00:00:00 UTC
From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <3612C62B.86264CB7@hamradio.org>
Source record: 97801

I, too, am out of your target age group. However, even ï¿½old-timersï¿½ above age 50 still have the faculties to remember back then!

I was licensed (Novice KN8EUR) in May of 1957. Before I got into amateur radio, I flew model airplanes as a hobby. After getting dizzy going around in a circle flying U-control, I decided to build a radio control (RC) plane. I bought a new McCoy 46 engine and, when I was nearing mechanical completion, I went to the local radio store to shop for RC transmitter/receiver equipment. (Yes, the local ï¿½radio storeï¿½ existed in our small (25,000 population) town and was the center of electronics activity from television sets to ham radio equipment, and all the parts necessary to maintain and even BUILD them.)

The counterman that day was Dick Emerson (W8UDH) and he steered me toward the shelves of amateur equipment. He became my first ï¿½elmerï¿½ by exposing me to amateur radio. I was fascinated with the Hammarlund, Hallicrafters and E. F. Johnson equipment that was on display. (I thought the SX-62 had the best sounding audio I had ever heard at that time.) The even had Johnson Viking Rangers and Valiants in KIT FORM.

The very next day, I found that the Chemistry teacher in my high school was a ham (Al Wisner ï¿½ W8SMT (SK) and that he had a school station set up (W8WOK). He always arranged to stay after school and hold informal code and theory classes for any kids that were interested in becoming hams. He was my ï¿½main-man elmerï¿½. So, in 1957 ï¿½ my sophomore year in high school ï¿½ I got my novice license. I never finished the RC airplane, and finally gave it away to someone who would never finish it either!

My father, who would have to finance my hobby, soon decided to get his license so he could see where his money was going (and share the fun!). He was licensed as K8HRS (SK) in 1958. My first station was a Hallicrafters S-38 receiver with a Heathkit DX-35 transmitter. We chose the DX-35 so I could later add the VF-1 VFO and a microphone when I got my General license (a few months after I got the novice). The nightly code sessions continued and I was doing 13 wpm by the time my novice license came in the mail. The General followed a couple of month later.

The S-38 was barely OK for novice CW on 40 meters (lousy selectivity), so when it came time to graduate to phone I got an SX-71. (It was this SX-71 I used to hear ï¿½ but not work ï¿½ EI2W on six meters in 1959).

I wonï¿½t take you through 40+ years of ham radio, but it has been the most enduring thing in my life ï¿½ and, at times, the most exciting. Whether it was RTTY, CW, EME, ATV, Contests, Field Day, working Owen Garriot on the space shuttle, getting WAS and WAC on six meters, Halloweï¿½en ï¿½goblin patrolsï¿½, emergency communications (Civil Defense in the 50s), etc., etc., it has been a real trip for the 40+ years.

And....it was the people that made it fun! Just think.....we are members of a fraternity that included some very famous (and infamous) people. Arthur Godfrey, Gen. Curtis LeMay, Captain Kurt Carlsen, Don Miller (remember the DXpeditions that never really happened?), Wayne Green, etc. etc.

Wayne Green was a real character. I first met him at the ARRL Convention in Cleveland in 1959. He worked for CQ magazine at the time and was carrying a purse! The last conversation I had with Wayne was during the first round of vanity call sign availability. When Wayne moved to New Hampshire and founded 73 magazine, he kept his W2NSD call and signed W2NSD/1 for years. I asked him if he would now get a W1-vanity call, and his reply was that he was petitioning the FCC for a call. He said, ï¿½If King Hussein can have JY1, he wanted just plain W1.ï¿½!!!

I have had a lot of BA equipment over the years ï¿½ Hammarlund HQ-110, HQ-170, HQ-180 ï¿½ Hallicarafters S-38, SX-71, SX-99, HT-37 ï¿½ Johnson Ranger, Valiant, 6N2 ï¿½ Globe Scout 680A ï¿½ Heath SB-300, SB-400, SB-200 ï¿½ National NC-300, NC-303. It wasnï¿½t until the 1970s that I finally settled on what I considered the unaffordable ï¿½Cadillacï¿½ of amateur equipment ï¿½ Collins.

I now have a Collins 32S-3, 75S-3C, 30S-1, 312B-4 and 62S-1. I also have enough tubes to keep it running until I go SK!

The BA gear is something that I can still maintain and repair as necessary. I will not become the dreaded ï¿½appliance operatorï¿½ that we first heard of in the 70s ï¿½ the guy who doesnï¿½t lift the lid of his gear because he doesnï¿½t understand what he is looking at beyond the knobs. If I canï¿½t fix it, I donï¿½t want it! Iï¿½m not ashamed to admit that my technology is rooted in tubes and transistors ï¿½ ICs started to leave me behind and microprocessors have slowed my comprehension to a crawl. Modern equipment doesnï¿½t get repaired at the component level anymore ï¿½ whole modules are now swapped out and discarded. It is in keeping with our ï¿½disposable societyï¿½.

I really enjoyed that part of ham radio which involved homebrewing equipment ï¿½ especially high power RF amplifiers. My first homebrew amplifier was a pair of 813s that I could never get working efficiently above 20 meters. The GG 4-1000 amp really flew, and I found that you could raise the plate voltage to 6000 volts and keep the idling current within the plate dissipation rating by using a 15 volt zener diode from cathode to ground for bias. With the plate voltage high, and by heavily loading the output, you could use an SB-200 to drive it to 5KW out and not vaporize the control grid with excessive current. A pair of 4-1000s in parallel makes a beautiful looking amplifier if you put a plexiglass window in the front panel!

This bias trick also worked with the 4Cx5000A ï¿½ except that you had to used the voltage drop across a 575A mercury vapor rectifier from cathode to ground to handle the 3 amp peak plate current. The 10KV plate voltage caused excessive idling current without bias.

Enough of my babble! Just think, I couldnï¿½t wait to join QCWA so I could harass the old codgers from within ï¿½ now I are one!

See what you started, Jeff!

Sorry that this is a bit off topic, but I thought you folks might be my best shot.

I need info on a tube for a project I am working on. I could use either a 6802 (also sold as CK6802) made by Raytheon and Sylvania. The other option is a GC10/4B, a Euro number by Ericsson. As I understand, these are pretty well interchangeable.

A found a one page data sheet on wps.com on the 6802, but that's about it. Any ideas on more detailed data sheets and/or app notes?

Thanks in advance!

Mike, WB5MYY

3523. Re: 4H4C Amperite Ballast Regulator Tube

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-30 00:00:00 UTC
From: ed_engelken@my-dejanews.com
Message-ID: <6utdbgdom1@nnrp1.dejanews.com>
Source record: 97895

Ken:

The standard work-around for the 4H4C is simply to substitute an old 6V6 with a good heater. The 6V6 has a 6.3 volt, 0.450 amp heater and provides the proper voltage drop for the 6C4 and 6BE6 in your HRO-60. This substitution is recommended by National as a temporary fix. The 6V6 doesn't provide any current regulation though.

The short-lived 4H4C tubes are very scarce and expensive. I have used a 6V6 in my HRO-60 for the last 10 years or so and I haven't noticed any difference in performance.

Best Regards,

Ed

I could prepare a compilation of the articles, but only with the blessings of whoever owns the copyright to all those old 73 articles. And with as much stuff as Wayne Green's companies have been through, that might not be possible.

If you feel strongly about making these conversion articles available in a compilation, SEND ME AN EMAIL! (Please don't reply to this forum.) I welcome YEAs as well as NAYs.

If I see enough support, I'll approach the folks at 73 again. A few persuasive emails from you fine hams will certainly help my case.

Email to:

jstrohm@texas.net

Thanks

The National "Airways Ground Receiver" (AGR) Series

National Radio Company, Inc. (Some history:)

In 1932 the General Electric Co. received a contract from the Civil
Aeronautics Authority, (CAA) (Now the FAA.) Because GE didn't have a
receiver to go with their transmitter at the time, they asked James
Millen of the National Company Inc. to design and build them a
suitable radio for the contract. The result was the National AGS
(Aeronautical Ground Station.)

This was one of the first super heterodyne high performance receivers
National designed and built.
With a companion regenerative LF receiver called the SW-58C for the
200-400 kHz band,
quite a few AGS systems were installed.
(Exact numbers are impossible to come by, but these radios are
considered very collectable today.)

With AGS systems appearing at airports across the land, the airline
industry began to
recognize a good thing when they saw one. (Reliable radio
communication for aircraft was
still in its infancy back then.)

The airlines, lead by Herbert Hoover Jr. of Western Airlines (now
TWA) gave James Millen and
National a set of requirements. These requirements closely matched the
amateur communities wish
list for a "best" all round amateur radio receiver. Thus the famous
"HRO" was born. First
announced in October 1934, the HRO was to become one of National's
defining moments in history.
Yet like anything else, the HRO could not be all things to all people.
While an extremely

sophisticated design for its time, it suffered from one major problem:

You still had to switch coil sets to change bands.

Enter the Coil Catacomb radios:

In 1935 National announced a new receiver design, the NC-100.
The NC-100 introduced an innovative sliding coil catacomb design of wonderfully elegant
mechanical engineering. Designed by James Millen and Dana Bacon, this was the first of a long
series of "coil catacomb" radios.
The new design avoided the problems inherent in the coil set switching of the HRO's,
and still retained the performance advantages over the competition (many of whom were using very simple band switching circuits, prone to stray resonance's
and thus dead spots in tuning.)

From 1936 until at least 1949 variations on this design were still being produced at National.
The NC-2-40D is considered to be the last of the National coil catacomb designs.

James Millen (with his own company the "James Millen Manufacturing Co." since 1939) continued
development of the sliding coil catacomb concept after WWII with his commercially unsuccessful
DPF-210 and DPF-501 radios before eventually also abandoning the concept because of
manufacturing costs..

Now, on to todays subject....
The AGR (Airways Ground Receiver):

While the private airlines purchased lots of HRO's The government (CAA) went for the
slightly less expensive and more versatile NC-100 design.
The CAA NC-100 variants are known by a series of model codes:
All have three letters (RCE, RCK, RCL, RCP, etc.) and reflect both changes incorporated
into the basic design and the government sub-contractor who made the changes.

All of these radios started out life as National NC-100's.
National was well known as a primary supplier of both components and sub assemblies
to many other radio companies. It would only have been a small step for them to move into
supplying complete radios to other government contractors.
Perhaps the unconverted radios already belonged to the CAA?
I have been unable to locate any records that could shed light on this part of the

AGR's history.

Another still unresolved questions about the NC-100 based "Airways Ground Receiver(s)" is:
How many were originally built and sold to the CAA by National, and how many NC-100 radios
were modified by other contractors?

Versions and more versions:

Later versions started out life as type RCE, RCF, RCK and RCL radios and were then
modified into type RCP and RCQ radios under multiple "retrofit" contracts.

Both my type RCP's started out life as type RCK radios, all the I.F. transformers are
ink stamped "RCK."

All of these radios bear strong resemblance to their NC-100 "Father."
All have the National sliding coil catacomb design with the white or orange marker
which shows band setting by which hole on the front panel you can see it through.
All have the famous PW type dial, geared tuning drive and National three
section main tuning capacitor.
There are several extra controls related to fixed frequency operation and
the CONS system on the front panels of most the CAA variations.
Many also have a "dial lock" stud located next to the PW dial.
Some earlier versions have a sharp/broad control on the front panel for
changing the IF band pass characteristics.

I am still missing quite a bit of information. I have manufactures manuals for types: RCF,
RCL, RCP and RCQ.
At least some information, (schematics, etc.) on several of the others, and of course
Moore's 3rd & 4th to refer to.

Some of what follows is fact, some speculation. I'll try to be clear which is which.
I've noted that Moore's 3rd refers to several of these radios as NC-100A based units. This is
incorrect. All were based on the original NC-100 (non A) PW dial design.

The earliest known contract for "Airways Ground Receivers" seems to be from 1937,
not long after the NC-100 started coming off the National production lines.

This radio, the RCD was built by National directly.

All of the series except the early RCE's & RCF radios seem to have
been modified for fixed
frequency operation by allowing the high frequency local oscillator to
operate crystal
controlled. 3,025, 3105, and 6120 kHz seem to be typical "channel"
frequencies for crystal
control.

Typical specifications:

5 Bands
200 - 400 kHz
1.3 - 2.8 MHz
2.7 - 6.4 MHz
5.9 - 14.4 MHz
13.5 - 30.0 MHz
455, or 457 kHz IF transformers with variable bandwidth modification.
Unusual tone control circuit, (steep audio rolloff below 100 Hz and
above 2 kHz.)
Fixed frequency operation option, and INS or CONS system.

No s-meter or crystal filters, seem to have been used.
Except in the very early RCD, which had a crystal filter.
This would tend to lend support to the reported as common, "remote"
use of the radios.

A "typical" tube line up in these radios, (this one is for the type
RCL):

6K7 RF amplifier
6J7 Mixer
6J5 High Frequency Oscillator
6K7 1st IF amplifier
6K7 2nd IF amplifier
6C5 detector
6F8 1st audio amplifier and squelch
6J7 Beat Frequency Oscillator
6J7 AVC Amplifier
6J7 CONS amplifier
6V6 Audio output
80 rectifier

Variable bandwidth I.F. Transformers:

Most of these radios were built with unusual modified National IF
transformers.
Besides the normal primary and secondary windings these also have a
third (tertiary)
winding used to effect the coupling coefficient of the transformer.
This allowed two different bandwidths (sharp or broad) depending on if
a

switch connected one end of the tertiary winding to ground. Later models of these radios
(RCP, RCQ) had this feature (switchable bandwidth) removed and the transformers
hard wired either sharp or broad.

Series Noise Limiter Modification:

In the type RCQ the 6C5 was replaced with a 6H6, with the second diode in the 6H6 used for
Nationals "Series Noise Limiter" system. Some RCP's also received this modification.

Both my personal RCP's have lower serial numbers and do not have the 6H6 replacing the 6C5.
I have a set of field change sheets, which describe the modification of type RCP radios to use the 6H6 dual diode tube and noise Limiter circuits.
This was a CAA ordered field retrofit for RCP radios currently in service.
The modification order and instructions, (CAA Communications Engineering Division Circular #
41) was issued on August 17, 1948.

Later models went through a number of small changes as problems with the interaction of IF bandwidth, RF gain, and CONS set points were addressed.

The primary use of these radios seems to have been in a fixed frequency mode. Perhaps the main airport "call up" frequency for the tower?
Close examination of the design shows extra effort made to insure receiver stability.
Temperature coefficient's of components in the local oscillator, IF chain and RF front
end were selected and specified with frequency stability clearly in mind.
The early CONS squelch system, coupled with the unusual audio filter in the radio clearly
point to clarity and reliability of voice communications as the design priority.

CONS allowed the radio to effectively ignore random background noise, yet produce a high level signal out when an approaching air crew called.

Excerpts from my type "RCP" manual:

"... designed for use at Civil Aeronautics Administration Airway Communications Stations."
"... The high frequency oscillator has been modified so that it may be made either crystal controlled or tunable by means of a switch on the front panel."

"... to facilitate the AVC and CONS circuit... the second detector
circuit has been changed,
using the 6C5 second detector tube V6 as a diode, by connecting
the grid to the plate,
instead of as a triode."
"... The audio amplifier circuits of the receiver have been redesigned
to give a frequency characteristic which is fairly flat from
100 to 2000 cycles and falls off slowly to
give a response of more than 15 dB down at 5000 cycles."

Excerpts from my type "RCQ" manual:

"... This receiver was originally a Type RCK or RCL receiver.
The type designation was changed to RCQ at the time these
modifications were made to
distinguish it from its original type."
"... The AVC circuit has been completely changed to correct several
conditions. Before
modification, the AVC action was proportional to the peak signal
input and thus was
unduly affected by static crashes and modulation peaks. This
feature was considered
undesirable, therefore the AVC circuit was changed so that it
responds to the average
carrier input."
"... The CONS circuit has been changed.... This modification has been
made because the CONS control was so badly interlocked
electrically with the RF gain control that it
had to be reset each time the RF gain control was changed."

Unusual output panels:

All of the later units have an unusual terminal board output connector
panel on the rear.
This is one of the easiest ways to quickly identify one of the AGR
series radios at a hamfest
or swap meet.

Labeled outputs include: "monitor" and "600 ohm" output terminal
screws, as well as speaker terminals. This would allow the audio to be
easily piped into a local audio system for output
on monitor speakers throughout the building or tower.

Most of the CAA radios also have single ended 6V6 audio outputs.
(This was common in military versions of the NC-100 and NC-100A, but
the civilian and
amateur versions usually had push pull output circuits.)

My contract notes point to production runs from 1937 to 1948.
Production contracts over an 11 year span tells us that they filled a
real need in the pre and post WWII aviation arena.

These radios show up from time to time at ham fests in the $50-100
price range.
With good performance, and a ton of interesting history attached to
each one;
I rate them as a definite "buy" for any National collector willing to
reverse the numerous modifications found in most.

Even the badly butchered ones can be fun, the experimenter can have a
ball playing with the many changes and modifications these radios
received over their service life.

One item to watch out for: Two of the four I've purchased have bad
main power transformers, apparently a common failure.

If you have one of these radio's, I would appreciate hearing from you
with the data plate information. I would also be more than happy to
trade manual photocopies in order to complete my set.

It worked. I was living in Vermont at the time and had a TH6-DXX at 90 feet and 1 KW input. If the band was open and you had a good signal into Russia the woodpecker would sit on your frequency. When you returned dots at the proper speed it would go on to sit on another station at a different frequency. The signal was very strong on the east coast. Sun spots were poor and the MUF was right around 20 meters so the radar spent alot of the time on 20. I did actually hear it on 15 meters but that was very unusal. 15 was dead most of the time to Europe. This was in 1976,1977, 1978. By 1979 I was mostly inactive from the Vermont location.

The "woodpecker" seemed to be most active on 20 meters, but was also sometimes heard on 40 meters...seemingly unusual frequency bands for an "OTH" radar system to be operating on. Signal strength was quite strong, especially as you mention on the East coast. That leads me to believe the transmitters (believed to have originated from Russia) had to be extremely high power, using some form of broadband antennas. Do you know whether the "woodpecker" ever was heard outside of the (American) amateur radio bands? During that period of time I was working as an engineer for the Voice of America, and altho there was quite a bit of jamming of their signals coming from the Soviet Union, I don't recall it being similar in nature to the "woodpecker" heard on the ham bands.

Here's the applicable section of the FAQ. I have added a request to please put FS and FA in the header of For Sale and For Auction posts.

The complete FAQ including sources of boatanchors, parts, and manuals, boatanchor e-mail lists, boatanchor web sites, and lots of other boatanchorish info can be found at:
http://www.cs.unc.edu/~nick/rrab.faq.htm

"Another fine service from the friendly folks at R.R.A.B."

What is the rec.radio.amateur.boatanchors newsgroup for?

The polite discussion of boatanchor related topics:

Restoration
Repair
Operation
Collecting
Parts sources
Historical info
Legends and Lore
Vintage operations,
Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap
[please put FS (for sale) or FA (for auction) in the header]

Who is welcome on the rec.radio.amateur.boatanchors newsgroup?

ANYONE interested in Boatanchors.
Hams, Non-hams, SWLs, military surplus fans, etc.
Newcomers, old-timers, thrill-seekers.
Women, Men, Boys, and Girls of all ages.
Commercial posters sticking to boatanchor topics

What is rec.radio.amateur.boatanchors newsgroup NOT for ?

Pictures (attachments) - it is against netiquette, lots of people can't read them, and it chokes many news readers
(post them on alt.binaries.pictures.radio, put them up on a web page, or send via private e-mail)
Newer equipment (use rec.radio.amateur.equipment)
Vintage broadcast and phono gear (use rec.antiques.radio+phono)
Vintage audio gear (use rec.audio.tubes)
Vintage solid-state gear

(try the VSS list - Send e-mail to listserv@listserv.tempe.gov. Put
"subscribe VSS" in the message body)
Homebrewing with modern technology (use rec.radio.amateur.homebrew)
Non-boatanchor buy/sell/swap posts (use rec.radio.swap)
Antennas (use rec.radio.amateur.antennas)
General ham info (use rec.radio.amateur.misc)
Code vs No-Code (use rec.radio.amateur.policy)
Flames (use alt.flame)

Been thinking for a long time about learning another language, but never quite get around to enrolling in that course? Been dreaming about travelling to far away places, but there's too much planning and arranging involved? Here's your trouble free opportunity for a unique learning experience. Study Spanish at the Institute of Progressive Communications on the campus of the University for Peace in Costa Rica surrounded by nature. Our all-inclusive four week package takes the hassle away. You'll live with a local family in a tranquil small town and be taken by their warmth and friendliness.

Are human rights, social justice, and the environment important issues for you? Feel that everyone has the right to communicate, but the mass media doesn't give everyone equal access? Learn more about the media from a progressive perspective from the staff of Radio For Peace International, a global media model with a shortwave station broadcasting from the campus of the University for Peace which has been in operation since 1987.

Four week courses provide you 80 hours of small group Spanish language instruction and 40 hours of media and radio coursework. Our small class sizes insure you personal and individualized attention.

Comments from recent students: "I liked the friendly, helpful professors and the activities like the fruit festival best...I feel like I definitely got my money's worth." K.W. "I feel I have learned quite a bit"thanks to the exercises, the personal attention, and the responsiveness of teachers and administrators...I love Ciudad Colon, and found everyone to be friendly and patient with me!" Anon.

3541. What to do with NC183's

Newsgroup: rec.radio.amateur.boatanchors

Gang,
Ever find yourself in this position. You have one NC183 that works but because you had to take it down to bare metal and repaint it, it now has the panel lettering missing. Comes along another NC183 that looks good (original paint) and says needs work so you buy it. Eureka, it actually works! So you do a nice recapping job and change half the resistors (like the first NC183) and then find the transformer is getting hot and 'smelling' like it wants to self distruct. The first receiver pulls 85 watts and the second (bad transformer) pulls 145 or so. The Ryders books says they pull 120 watts. What to do? Swap power supplies, try and find a good transformer, sell one or both the way they are, what? They are both too good to just trash one.

Terry

Just a side note here.
FT additionally, for "For Trade"
Along with the WTB (or WTD) for "Wanted To Buy"

Perhaps adding "People with a moderate sense of humor and a modicum
of common sense." Of course, that would immediately alienate those
lacking in either.

I haven't read the FAQ/Charter in detail recently, but should there
be a section specificlly defining "uncilized" behavour?
Such as endless debates on code vs no-code, any prices over what *you*
want to pay being referred to as gouging, also, the usual "price police"
tirades. I mean, there is a difference between mentioning that the
average price on an HQ-110 as $100-150 is one thing. Carrying on endlessly
about the one you bought for $5 or accusing the seller of lacking a full
set of parents is unnecessary. Hrmmm, there are other things that could be
done without in this group. But I'll let someone else have a go at it.

Heh, ok, I'm guilty of a slighty imflamitory title.

I grew up in the 50's worrying about russian ICBM attacks and have a nicely broken nose from a miscued drop drill in the 1st grade. However, I got licensed in 1967 and have been having an enjoyable time with amateur radio ever since.

My question for some of the BA types here, in the 40-50 year old range, is this. How many of you got started in the mid-sixties and used to devour old QST's as a way to pass the time?

How many hung out at local clubs and pestered the local TVI generators?

Despite the COMPLETE and TOTAL lack of the word "hobby" in the FCC rule regarding amateur radio, I grew up in the "hobby" thinking of it as a vast fraternity of (mostly) enjoyable fellow amateurs.

How many of you had the benefits of an Elmer or two? How many of you really did chop parts out of old TV sets for one reason or another?

I guess what it comes down to, I grew into the role of a ham with the belief of sharing, helping and working together.

OK, so I never really got into contesting or passing traffic, I never had a problem with those that did. But when somebody asked for help, be it putting up a 1/2 wave dipole or trying to get an old model 15 to work on 20 meters, I always tried to assist. I figured it was a debt I owed to those before me that put up with my endless questions. As the other Jeff pointed out, yes, I do pass along or give things away from time to time. But then, others have done the same for me as well.

I have been a faithful attendee, as a vendor, at the TRW ARC swap meet now for the past 15 years or so. But to me, it's more of a social event. People *know* where to find me. When asked if I had a resellers license, I mentioned that I actually need a rebuyers license based on the general cash flow. And it is certainly a lot easier to bring home that 500 lb WWII surplus thingamajig if I don't have to drag it back an additional half mile to the parking lot.

To me, amateur radio has been a 30+ year journey to a strange and wonderful place full of, well, strange and wonderful things,

places, people and technology.

Oh yeah, this *is* a boat anchor newsgroup. If the above didn't
fit into some people's rigid guidelines, perhaps the following
will.

After years of threatening to get on for SKN on new year's eve,
I finally made it last year. *And* I managed to do it with a
Heathkit DX-20, Hammarlund HQ-110 and a BC-453 as a Q-5er. After
several hours of no success, I managed to finally snag a QSO.
A a special tip-o-the-hat to W6FU for making the 30 year reunion
station a success.

73 es GM from Jeff
Looking forward to another 30+ years of more of the same.

wetartie@ix.netcom.com (KB3PT) wrote:

While it might make good propaganda to say that the Russians have primitive radar, I am not sure that is true at all. The woodpecker seems to be the first OTH radar that was deployed. The primitive label seems to be caused by the inspection of the Mig-25 that landed in Japan. It used a lot of vacuum tube technology. Since the west had gone solid state, it was assumed that everything about Russian technology was ancient. Rumor has it that the Mig-25 radar could kill a rabbit at the end of the runway. The basics for their airborne systems might easily have been obtained by espionage of one form or another.

In more modern times, the Russians seem to be the only ones that can still reliably produce the high powered (2 MW) cavity klystrons needed for a new ground based tracking radar. Our manufacturers, few as they were, have largely lost the recipe when they retired their old-timers. So who is backwards now?

Since the woodpecker operates at HF, creating gobs of power is easier than at C band. Because it is a spread spectrum system, the power in each returned pulse is added to a number of other returned pulses. I don't recall the number involved. If it were say eight, then the effect is if the radar had eight times its actual power output. The nastiness of the signal seems to be caused by its fast rise and fall times causing a large radiated bandwidth. It would be called "key click" in a CW signal.

I found some info in an old magazine.
Basically, in the early 70s the Russians built an Over the Horizon Radar installation about 100 miles East of Moacow with a phased array antenna several miles long. It transmitted 100us pulses with an estimated peak power of 20MW with a repitition frequency of 10Hz. It operated between 5 and 20MHz, with a preference for ham bands! (or so it seemed!)

America and Australia had, and still have, OTHR operating in the HF bands, but these cause less interference - although you can still hear them! You can often hear a system using chirp pulses on 40m. (maybe another Russian system?)

I'm unfamiliar with the sophistication level of Soviet radar systems today, but am somewhat familiar with the lack of sophistication in current Soviet-manufactured "consumer" electronics (such as radios and televisions). Many of the Soviet inventors and scientists defected to other countries, including the U.S., and this appears to have caused a serious loss of technological sophistication in their development of modern electronics and communications equipment for many years. The "consumer" radios and televisions which are manufactured there today are still quite "primitive", by most of today's "standards". Due to current economic problems, it's likely to be many years before a "technological catch-up" becomes possible...altho info about the current technological status of their military communications and electronics "sophistication" is somewhat difficult to ascertain.

Is this a case of the Russians using Russian-developed technology, or of them manufacturing based upon technologies developed elsewhere?

It certainly had "devastating" effects upon the bands it operated on (which, for some reason, appeared to be primarily American amateur radio bands). It may have had other, less-publicized effects upon

other entities, as well...such as animal, plant, and human life.

There's some interesting reading available on the 'net about the
American "HAARP" project (and it's possible "side-effects"), but
very little available regarding the earlier "woodpecker" OTH radar.

Interesting information! What magazine was this info published in?

> America and Australia had, and still have, OTHR operating in the HF bands,
> but these cause less interference - although you can still hear them!
> You can often hear a system using chirp pulses on 40m. (maybe another

Perhaps, altho most OTHR systems today operate on much higher frequencies.
You're absolutely correct about Australian systems; quite a bit of the
development of modern spread-spectrum and OTHR systems took place "down
under".

Item #5 ( 1 only)
----------------------
- Mfg : RACAL (CANADA) LTD -OTTAWA, CA
- Model Type SA-520
- Fully Portable
- Freq Range 2c/s to 300,000 c/s
- Solid State throughout
- AC/DC powered
- Effective (4) digit readout Display
(Note - NOT LCD or LED but "illuminated numbers"
in vertical scales. ie "staircase" design)
- Counting periods of 0.01, 0.1and 1sec
- 7lbs (portable operations)
- sampling - auto.repetative
- clock freq -100kc/s
- MAX AC Input 150 r.m.s, & DC Input -+ 100v
- Dimensions - 8" wide x 6 1/2" high x 7 1/4" deep
- Unit NOT Operational Tested but, has power and readout.
- Spec sheet provided (no manual)
- Scanned pic avail upon request for equip I/D
-$20USD + shipping (approx 10lbs)

I don't fit into your desired age range, but your post was kind of interesting....

I got my ticket after many years of involvement with boatanchors and electronics in general. Unfortunately, the ticket is hardly used much these days, except for talk-in to hamfests on 2M!

Got into electronics as the neighbor kid who scrounged parts out of old TV sets to use to build projects out of ARRL handbook, etc. Farted around with CB and micropower FM broadcasting for a while, and got into BA ham gear while thinking about setting up a SW pirate station (it never materialized). In the process of rebuilding DX-100's and a couple Johnsons, I decided to get a ticket about 10 years ago. Figured it would be good to be able to put a rig on the air for extended testing (contesting) without worrying about getting FCC attention. Kinda fell in love with this kinda gear, and now do rebuilds and resale at hamfests or online.

I seem to recal that the woodpecker was a "bistatic" system which transmits over a wide front and receives somewhere else. Looking for targets more by what they change in the signal path than by true reflection.

I seem to recal that there was a similar system in Canada during the fifties but I may very easily be mistaken.

Cheers

Robin

If I failed to return your message, it's because I'm new with computers and I messed up. I sent e-mail to everyone who requested a list, but I think that some of them got sent to the wrong place/person. If you wanted a list of what Ed currently has available, please check under Boatanchors for sale -list. I think I put that in right! Anyway, call 217-787-3527 evenings Central time or e-mail with questions. Sorry for the confusion. I am doing this for my husband, Ed (WA9PFB) and not only am I new to computers and can't type, but the names of the radios etc, are like a foreign language to me! Just bare with us, we'll get better. I hope! The original message was sent by me, Trish944, if that helps with the confusion. Thanks.

Well, I'm just "slightly" out of your target age group, being 39 years old (40 in January), but I thought I'd toss my two cents' worth in...

I remember those "civil defense" drills from grade school in the 1960s. Never got injured during one, however... ;)

I got my ticket when I was in college, but I dreamt about ham radio much of my adolescent life. I grew up in Delaware, which everyone knows has a VERY small ham population. I was a CB'er at that time, and I spent hours reading ham radio books checked out from the county library, wishing I could become a ham. As a young teenager, about 13 I recall, I collected bits of junked CB antennas for a few months, and, using the information found in the ARRL handbook, built myself a wide-spaced, 3 element Yagi beam for 11m CB. Fun stuff!

I salvaged old TV and radio chassis from the alley behind the local RCA repair shop and from peoples' garbage left out at the curb (much to my parents' dismay!). I studied electronics for three years in high school, and got my college degree in EE. I now enjoy a fruitful career in the aerospace industry, and I attribute it to my early interest in radio.

My elmers were two of my college instructors, Frank Getz, N3FG, and Bill Dykes, W3FRC (sk). Those gentlemen got me started in ham radio, taught me the code (which I still use almost 100% of the time!), and taught me how to conduct myself like an amateur radio operator. They coached me through my Novice, General, and Advanced tickets, which I got within one year. I will be eternally grateful to them for their time, effort, and patience. The last 21 years as a ham have been a lot of fun, and I look forward to many more years of fun. I may not be an OT to many of you, but I sure am to today's generation of newbies!

My first station was an Eico 723 CW transmitter and a Lafayette HA-800A receiver, with a G5RV antenna at 40 feet. Surely not sophisticated, but I filled a logbook with that gear and a few 40m and 80m crystals. I never made a VFO'd QSO until I had my Advanced ticket, when I picked up an old Heath VF-1. It drifted one way, and the receiver drifted the other! Life's a bitch, but you make do!

Whenever I get the chance, I offer my time and knowledge to the newcomers. I strongly believe that elmering is a tradition that should be passed on from one generation to the next. Too bad

that so few others share my beliefs on this matter.

Over the years, I've done my share of DXing (208 countries) and traffic handling (been net control on numerous nets, and manager of a couple) and rag-chewing. I love CW operating, QRPing, and fixing up and operating BA equipment. Recently, I built up a little CW transmitter with a 6V6 oscillator and 807 PA, just for fun. And fun it is! Paired with my Drake R-4C, I've had a real blast making QSOs with it. I've had my share of state of the art gear, but at the moment my newest HF radio is a 1984 Ten Tec 560 Corsair Mk.I! I have no amplifier and no beams. I use a simple Butternut vertical and whatever power the rig du jour puts out, whether it's a milliwatt QRP rig, the 65 Watt 807, or the 100 Watt Corsair. If I can't make a QSO, for whatever reason, then I shut down the gear and go watch TV or something. Hamming is a hobby, and I treat it as such.

Sorry for the long ramble, gents, but it's been fun!

73 to all!

Source record: 97964

Rare opportunity to purchase an original Alpha "Steamer" PA-70V Vapor-Cooled Amp in Very Excellent, extra nice condition. This is the amp that is identical in appearance to the Alpha 77Dx and 77Sx, but uses a smaller, more compact cabinet. The amp is very clean inside
and out. Full output using a single 3CV1500A7 triode with attached "water boiler." This is one of the few amateur-class tubes that can be rebuilt to original Eimac specs. This amplifier takes distilled water for cooling and runs extremely quiet, using only a whisper fan for supplemental air convection past a passive radiator. I have two "steamer" amps and I am selling S/N 183. Factory's glitch protection and AG6K parasitic mods performed. Output circuit is extra rugged, using a Jennings vacuum variable capacitor for output tuning.

The entire plumbing system is new, using all Teflon components from New Age Industries, Inc., which meet or exceed original mechanical and electrical specifications. The tube was recently checked out by John Cavanary at Econco and was put through hi-pot and emissions testing. All testing results were excellent.

Amp comes with original factory manual and power cord.
I am asking $3295 + shipping and insurance. If you have any questions, I will be more than happy to answer them. .JPG images of the amp making full power available upon request.

Does the R-5000 manual have much to say about the "woodpecker",
either of a technical nature, or otherwise? Or does it perhaps
explain the difference between the "regular" noise blanker and
the one for the "woodpecker"?

Thanks,

> it at the time in Pop'Comm.

Any further info, perhaps about what issue of Pop'Comm this appeared in, would be most appreciated. In extensively searching the web for info about the "Russian Woodpecker", using several search engines and also several different "search topics" ("woodpecker", Soviet radar, OTH radar, Soviet radio jamming, etc.), I was amazed at how few "matches" appeared. Very little substinative information seems to exist about "the woodpecker", with more being reported as "rumored" than "confirmed facts". It appears the "facts" about the "woodpecker" were kept few and far between at the time, and they even seem to be so today.

If you want some interesting reading, search the web for "HAARP" ... there's some real "eye-openers" to be found in such a websearch!

At the time, wasn't Soviet radar considered to be rather "primitive" in
nature, compared to that of other countries such as the U.S. and Britain?
I seem to recall stories in the 60's and 70's about how the Soviets would
analyze radar equipment from downed planes, as it was much more sophisticated
than any such equipment they had ever seen. Do you know if the precise
location(s) of the "woodpecker" equipment was ever determined and publicly
made known, or any info about the type, power, etc. of the transmitters
used? The power consumption of such a system alone could almost lead a
country to bankruptcy! <g>

Well Clint...I thought an agreement is when "two parties" have a mutual understanding??? What Fry's is doing is trying to force their policy on the public. There is no agreement, no contract. Infact Fry's hides their policy on the back of the receipts so you don't see it until you have paid for the item. "you" may choose to allow Fry's to dictate their policy to you.... That's ignorance!

Humorous story clipped....

I bought a HP Pavillion PC at Frys a month ago, had one salesman help me, then he had to go take care of something. A bit later, a saleswoman (who saw me talking with the first guy) approaches me and we cut the paperwork and I buy machine. Later that day I return for a perifiral(sp) and first guy says "want to get that PC?". "I already did, your ladyfriend did it for me". "Who?" "I thought you were working together..." Well, it's not my problem, but it looks like Frys employees will shaft each other when chance appears.

Oh yeah, had a problem with the HP, it would randomly reboot even if I was actively using it. Apparently fixed by loading in a new video driver...

Suspect this is off charter for the boatanchors group....

I've heard of hams equiped with kilowatt transmitters and morse code keyers and directional beam antennas "chasing" the woodpecker off the ham bands. By sending pulses of CW at about the same rate as the woodpecker rate. Aparently it made QRM for the woodpecker operators.

I've heard similar stories, tho I suspect what it may really have done is to have created "echos" in the signals being received by the Soviet "woodpecker" receivers which had to have been used in their "OTH" or spread-spectrum radar systems. May even have caused the operators to suspect something was "wrong" with their equipment! <g>

I seem to recall back in the early to mid 1980s that some company came out an external noise blanker called something like a "Woodpecker Muffler". I think they placed some ads in QST for it. I remember thinking about getting one.

Your right also about there being very little information on it on the Web.

Steve, do you still have the SS 6M amp? I Know I'm a little slow on the reply, but I just
saw your post.What tube(s)? Plate,screen and
filiment supply included? TR relay included?
Meter(s)? What shape is the chassis in? Is it
cased and what condition ? I know its alot of questions for $25 but it sounds like something
I've been looking for.Let me know
Bill K

You guys are just too funny! What a hoot! This eBay stuff is the best thing
to hit this news group in a long time...never have I laughed so hard!

3608. Re: Help need tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-09-30 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19980930080544.25997.00000325@ng116.aol.com>
Source record: 97992

Yes, 12AX7A is the same as a 12AX7.
The 6L6, 5881 or 1614 are virtually the
same tube for the Ranger.

Sounds like you will be a Ranger Expert
in no time. BTW, I have used 6V6's
in the Ranger as modulators in a pinch...
wouldn't recommend it for the long haul,tho.

I (as well as a host of others) are Ranger
"nuts"...I have restored about 10 of them
over the past 15 years. Any other
questions....please ask.

I think that you can just plug in a 6V6 tube
in that socket. National had a factory
Service Note describing this for the NC-300
during the late 1950's.
